

# Proposition 1B: Goods Movement Emission Reduction Program

## Application Information

### Engine Emission Levels for Replacement Truck Projects

The Proposition 1B: Goods Movement Emission Reduction Program (Program) provides grants to equipment owners on a competitive basis to upgrade their equipment to cleaner technologies. Higher grant amounts are available for cleaner technologies.

When you apply, you will be asked to choose an engine emission level for your replacement truck but will not be asked to provide a specific model year. This will provide the flexibility to choose any model year truck that is within that emission level, without changing your competitive ranking and eligibility for funding in the Program.

Engine emission levels are a way to label how clean the diesel engine will be for the replacement truck. The following list shows the NOx engine emission level options you can choose from when applying for a Program grant. For complete engine specifications, see the Program announcement or the Program website at [www.arb.ca.gov/gmbond](http://www.arb.ca.gov/gmbond).

#### **Engine Emission Level Options**

1. **Clean “2007”**: Meets 2007 Engine Standard - 1.20 g/bhp-hr or lower NOx  
These typically can be found in used diesel trucks. Engine model years may include 2007-2010.
2. **Cleaner “2007+”**: Exceeds 2007 Engine Standard - 0.50 g/bhp-hr or lower NOx  
These typically can be found in diesel or alternative fuel trucks. Engine model years may include 2009-2011.
3. **Cleanest “2010”**: Meets 2010 Engine Standard - 0.20 g/bhp-hr or lower NOx  
These are typically new diesel or alternative fuel trucks. Engine model years may include 2010 and later.

Note: Truck model year ≠ Engine model year. The engine model year is typically at least one year older than the truck model year.

#### **Changing Information on Application**

After the solicitation period closes, you are limited in what you can change in your application because some changes would affect the project’s competitive ranking.

You may choose to buy a truck with an engine that has a cleaner engine emission level than when you applied, but you will still only be eligible for the funding level you originally selected. For example, if you select Option 1, you can use Program funds to purchase a cleaner truck with a 0.50 or 0.20 g/bhp-hr NOx engine, but you will not receive any additional grant funds.

In addition, you cannot choose an emission level that is dirtier than the one you selected when you applied. For example, if you choose Option 3, you cannot use Program funds to purchase a truck with a 0.50 or 1.20 g/bhp-hr NOx engine.

The engine emission level choice will direct you to the maximum funding amount that you may request. Check with dealers or the ARB website at [www.arb.ca.gov/gmbond](http://www.arb.ca.gov/gmbond) for a list of qualifying engines.
