

## Climate Bingo | GAME INSTRUCTIONS

Climate Bingo has sources of climate pollution in black writing and solutions to climate change in blue writing. Ask an adult or a friend to read you the questions on the back of this card and cross off the answers. Once you cross off all the boxes, you win!

Pollution Sources and Solutions Bingo			
 <p>Solar panels and wind turbines make clean power.</p>	 <p>Cars take us places and run on gasoline.</p>	 <p>Cow poop can make biofuels or help our soils.</p>	 <p>Trucks deliver our stuff and run on diesel.</p>
 <p>Ships move our stuff across the oceans.</p>	 <p>High-speed trains can get us far quickly.</p>	 <p>Cows release methane, a strong greenhouse gas.</p>	 <p>Walking, biking, and buses get you places without using a car.</p>
 <p>Recycling gives trash a new life.</p>	 <p>Electricity keeps the lights and power on.</p>	 <p>Trees absorb pollution and make the oxygen we breathe.</p>	 <p>Factories use energy to make stuff like toys and clothes.</p>
 <p>Trash pollutes our oceans and makes greenhouse gas.</p>	 <p>Using less energy and water helps the earth.</p>	 <p>Airplanes take people to faraway places.</p>	 <p>Electric cars are cleaner than gas cars.</p>

## Climate Pollution Bingo | SOURCES

Many activities we do around the world use energy that is made by burning fossil fuels like coal, oil and gas. Burning fossil fuels makes pollution, including greenhouse gases. These gases trap heat in the atmosphere, which is changing the climate of the world. Pollution makes people and our world sick.

1. What animal releases greenhouse gas?
2. Where is our stuff made?
3. What flies and takes people to faraway places?
4. What moves our stuff across the oceans?
5. What moves people and runs on gasoline?
6. What moves our stuff and runs on diesel?
7. What keeps the lights and the power on?
8. What pollutes the oceans and makes greenhouse gas?

## Climate Pollution Bingo | SOLUTIONS

There are many solutions to climate change that make less pollution than fossil fuels. Making energy from the sun, wind, and other sources can power our vehicles and communities. Climate action improves our health and our world.

1. What gives trash a new life?
2. What are ways to produce clean electricity?
3. What are ways to get around without a car?
4. What absorbs pollution and makes the oxygen we breathe?
5. What kinds of cars are cleaner than gas cars?
6. What can we use less of every day to help the planet?
7. What can get you to far places fast on land?
8. What can we make using cow poop?

## About Us

California Climate Investments is taking action against climate change by investing billions of dollars on projects that reduce greenhouse gases and benefit our communities. Programs help to build sustainable communities through affordable and efficient housing, transit, walking and biking improvements, electric vehicles and equipment, making renewable energy, recycling and composting programs, planting trees, conserving and restoring natural lands, and much more.

SOLUTIONS - Answers

1. Recycling
2. Solar panels
3. Walking, biking, and wind turbines
4. Trees
5. Cars
6. Trucks and riding the bus
7. Electricity and water
8. BioFuel

SOURCES - Answers

1. Cows
2. Factories
3. Airplanes
4. Ships
5. Cars
6. Trucks
7. Electricity
8. Trash
