Yes David. That is correct. We require all controllers to emit less than 6 scf/hr whether the controllers are continuous or intermittent bleed devices.

Subject: Intermittent-bleed pneumatic controllers

Hi Mark,

Thanks for discussing how the Wyoming Oil and Gas Production Air Permitting Guidance works with me yesterday.

As I understand it, Wyoming's P-BACT permitting requirements do not allow pneumatic controllers at new or modified facilities to emit more than 6 scfh, whether the controllers are continuous-bleed or intermittent bleed. Is that correct?

Best,

David
