An hourly average concentration of PAHs was measured continuously. A 24-hour average was obtained for each day, which was then averaged over a month to calculate the monthly mean of the daily average PAHs.

Cancer risk of PAHs as an aggregate has not been determined.

A Comparison of the Aggregate of PAHs is not Available

Note: A=Annual; S=Summer (April through September); W=Winter (October through March); CA=Statewide; FA=Fresno Regional Average
