Food issues

• “Food vs. fuel” rhetoric and fact-starved alarm

• Food vs. fuel real competition for resources, especially land

• Food effects of biofuels are not all negative: economic viability of agriculture in developing countries, healthier diets for rich countries, etc.
Food and ILUC tasks

• Compare and evaluate estimates of price and consumption effects on food from biofuel production, including distributional considerations where possible.

• Food is a primary sustainability (non-GW) consideration for LCFS

• How should LCFS implementation accommodate it?
So far:

• Identify issues

• Literature review
