## PM Speciation Data Availability

Fuel Blends	Test Vehicle	Ions (cation/anion)	Carbon (IMPROVE_A)	Elements (ICP-MS)
CARB Diesel	C15	SLB/Done	SLB/Done	UWM/Done
	MBE 4000	SLB/Done	SLB/Done	SLB/finalizing
Soy	C15	SLB/Done	SLB/Done	UWM/Done
	MBE 4000	SLB/Done	SLB/Done	SLB/finalizing
Beef tallow	C15	SLB/Done	SLB/Done	
Renewable	C15	SLB/Done	SLB/Done	

- Test cycle/duration:
  - UDDSx2 for C15
  - UDDSx2 x3 for MBE 4000

## Estimated Reporting Limit

	Nitrate	Sulfate	Ammonia (all cations)	Elemental carbon	Total carbon
C15	0.07	0.07	0.07	0.28	2.24
MBE4000	0.014	0.014	0.014	0.092	0.733

- Laboratory reporting limited estimated in mg/mile
  - Improved sensitivity for IC
  - Increased sample air volume
- Data quality assessment (blanks)
  - Blanks for carbon are all below reporting limit; all samples are above reporting limit
  - Most blanks for ions are below reporting limit

---

---

---

---

## Trace Elements – C15

- Most abundant species include: P(31), Ca(42), Ca(44), Zn(66) ≈ average 200 to 450 µg/mile; followed by Na, Mg, Al, and Fe at an order of magnitude lower
- Little to no correlations between element emissions rates and biodiesel blend levels/types

---

---

---

---

---

---

---

---

---

---

## Summary

- **Fuel Effects**
  - Did not observe any unintended consequences for PM at different biofuel blend levels or with different engine technologies;
  - PM mass reduction primarily due to the EC reduction
  - Ammonia emission decreases as biofuel blend level increases.
- **Emission Control**
  - Primarily due to removal of EC via DPF
  - Reduction benefits are for all species
- **PM chemical profile**
  - Elemental carbon as the major compound without emission control and organic carbon with control technology
  - Charge balance for ions suggests collection of acid droplets
  - Sampling bias may become significant for post 2007 engines

## Baseline PM mass Emission Rate

Project/Reports	Model Year	UDDS	Cruise-50mph
CRC E55/E59	All 1975-2003+	1.79 ± 0.13	1.11 ± 0.06
	1999 – 2002	1.04 ± 1.30	0.52 ± 0.79
	2003 +	0.50 ± 0.47	0.39 ± 0.49
NREL 2006	2003 Coach Motor	0.254 ± 0.022	N.A.
ARB Caterpillar C15	2001	0.197 ± 0.015	0.116 ± 0.016

- Emission rate in g/mile
- All data from HHDDT chassis dynamometer testing
- Vehicle weight 56,000lbs class, except NREL at 23,500lbs
