Subject: New Plug-in Regulations - Tier I

Comment:

With this email, i am asking the CARB to raise the Tier I control number from 10 to at least 100. If the businesses doing conversions have to buy the equipment to show the lower emissions with only 10 conversions it will add approx. \$2,000.00 to each conversion, making it far too expensive. I own a 1970 Dodge A100 pickup truck which is almost finished being restored and the next step will be to have the power source changed to a plug-in hybrid electric vehicle. Raising Tier I to 100 conversions will lower the added cost for testing to approx. \$200.00 per vehicle, which will make it affordable for me, and I will then have a low emission truck which I can enjoy.

Thank you,

Ray Fitzsimons.
