Subject: Zero Emission Vehicle (ZEV) Program

Comment:

Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone. I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage.

Subject: ZEV Program

Comment:

Please don not again delay a requirement for ZEVs. Given that several major and many minor car makers are working toward having battery powered cars online by 2009 and 2010, California should set reasonable goals for sales of such.

Please;

1. re-commit to the full 25,000 ZEVs
2. have separate requirement for plug-in-hybrids
3. ncentivize plug-in hybrids that have the most on-board electricity storage.

Subject: CARB's proposed Zero Emission Vehicle changes

Comment:

Has your staff seen the movie "Who Killed the Electric Car?" If not, please have them review a little history of the manipulation of facts by the big auto companies.

Doing so will make it easier to (1) re-commit to the full 25,000 ZEVs that automakers had agreed to produce in 2012-2014, and (2) create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations. Choice for consumers means cleaner air for everyone.

Subject: Don't kill EVs a Second Time!

Comment:

I am writing to express my objection to the California Air Resources Board's proposed Zero Emission Vehicle changes. I support the Governor's agenda to reduce greenhouse gas emissions and the most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles, like the Governor's electric Tesla Roadster.

Unfortunately, at the next California Air Resources Board meeting, you're proposing to reduce the number of Zero-Emission Vehicles required of automakers by 90%, settling for only 2,500 from 2012-2014. I am asking you to:

(1) re-commit to the full 25,000 ZEVs that automakers had agreed to produce in 2012-2014, and

(2) create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations. Choice for consumers means cleaner air for everyone.

I have been trying to find a commercially produced, pure electric Zero Emission Vehicle for the past ten years. In the late 1990's I had a choice of several different models produced by different major auto manufacturers, thanks to the ZEV mandate. Today in 2008, there are no plug-in electric vehicles available from major auto companies. Use the mandates for cleaner electric power and the 'million solar rooftops' programs as a model. Please support battery-electric ZEVs and give the consumer a real way to reduce their carbon footprint.

Subject: maintain or increase required ZEV's

Comment:

I strongly oppose actions by CARB that would reduce the required number of ZEV's. The ZEV goals were once 2% in 1998, 3% in 2001, and 10% in 2003, but CARB put off clean air progress for 14 years until 2012 while our air quality and the people of this state suffer. As that date draws near, CARB staff proposes to further delay, by cutting the target in 2012 from 0.4% to 0.04%. The new target does not even approach the number of vehicles you have previously shown to be possible.

Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backsliding. I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. If that is one fifth of the 1998 goal, but at least it is a start. Staff's proposed 840 vehicles a year is not even a start; it is an insult to the people of this state. You stand firm. Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone. I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage. The number of Zero Emission Vehicles (ZEVs) proposed by CARB staff will allow automakers to backslide on their 2003 agreement and require just 2,500 true ZEVs from 2012-2014. Startups alone plan to introduce this many ZEVs; surely the major automakers can do better and not manipulate the system with credits. I ask that: (1) you require the full 25,000 ZEVs between 2012-2014 that the automakers lobbied for and agreed to in 2003; (2) that you implement a level playing field between all types of ZEVs to get clean cars on the roads of California; and (3) provide incentives for plug-in hybrids by taking from the dirtiest cars, not the cleanest ones.

thank you!

Hello, I am calling to express my objection to the California Air Resources Board's proposed Zero Emission Vehicle changes. I support the Governor's agenda to reduce greenhouse gas emissions and the most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles, like the Governor's electric Tesla Roadster. Unfortunately, at the next California Air Resources Board meeting, they're proposing to reduce the number of Zero-Emission Vehicles required of automakers by 90%, settling for only 2,500 from 2012-2014. Please have the Governor ask his appointed CARB chair, Mary Nichols, to (1) re-commit to the full 25,000 ZEVs that automakers had agreed to produce in 2012-2014, and (2) create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations. Choice for consumers means cleaner air for everyone. Hello, I'm calling about the upcoming California Air Resources Board meeting where they will discuss changes to the Zero Emissions Vehicle program. I oppose the proposed 90% reduction in the number of ZEVs. Please tell CARB that the full 25,000 ZEVs should remain a requirement. Under Governor Davis, the ZEV program was delayed by more than a decade. Does Governor Schwarzenegger want to be known as the Governor who delayed ZEVs a second decade? The ZEV goals were once 2% in 1998, 3% in 2001, and 10% in 2003. Now CARB calls for a miniscule 0.04% in 2012 to 2014. The old 1998 target is fifty times what is now being proposed for 14 years later. This is not a serious attempt to clean our air.

Subject: Please increase ZEVs, especially battery electric vehicles

Comment:

I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. I am especially interested in seeing an increased number of battery electric vehicles on the road.

Batteries are improving rapidly, so now is the time to revisit this issue.

Subject: I want production ZEV!

Comment:

The ZEV goals were once 2% in 1998, 3% in 2001, and 10% in 2003, but later CARB put off clean air progress for 14 years until 2012. As that date draws near, CARB staff proposes to delay again, by cutting the target in 2012 from 0.4% to 0.04%. The new target does not even approach the number of vehicles you have previously shown to be possible. Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backsliding. I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. If that is one fifth of the 1998 goal, but at least it is a start. Staff's proposed 840 vehicles a year is not even a start; it is an insult. You must do better. Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone. I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage. The number of Zero Emission Vehicles (ZEVs) proposed by CARB staff will automakers to backslide on their 2003 agreement and require just 2,500 true ZEVs from 2012 to 2014. Startups alone plan to introduce this many ZEVs; surely the major automakers can do better and not manipulate the system with credits. I ask that: (1) you require the full 25,000 ZEVs between 2012 and 2014 that the automakers lobbied for and agreed to in 2003; (2) that you implement a level playing field between all type sof ZEVs to get clean cars on the roads of California; and (3) provide incentives for plug-in hybrids by taking from the dirtiest cars, not the cleanest ones.

As the owner and operator of a 1998 Ford Ranger EV that was produced as a result of the original mandate, I would like to express my gratitude for your taking a stand to improve our environment. Electric vehicles can provide transportation to a significant portion of commuters if given a chance to mature in the marketplace. Please continue to set the pace for the rest of the United States by promoting expanded use of EVs.

Subject: ZEV 2008
Comment:

As the owners of two highway-grade electric vehicles, a GM S-10 EV and a Solectria Force, my wife and I are very familiar with the complete viability of this form of transportation. Not only is it the cleanest way to drive, we are also able to get all the energy we need to run these cars from the solar electric system on our roof. When we are driving, we often wonder why these vehicles are not available for everyone.

Clean air, national security, energy security, are just some of the reasons why electric vehicles MUST proliferate. The CARB must not shirk its responsibility as gate keeper for this essential technology.

I ask that: (1) you require the full 25,000 ZEVs between 2012 and 2014 that the automakers lobbied for and agreed to in 2003; (2) that you implement a level playing field between all type of ZEVs to get clean cars on the roads of California; and (3) provide incentives for plug-in hybrids by taking from the dirtiest cars, not the cleanest ones.

Thank you for your consideration of this request.

Subject: ZEV on CA roads
Comment:

Who NOW is killing the Electric Car!?

Why are CARB staff proposing to cut the target number of ZEV's in 2012 from 0.4% to 0.04%?

The ZEV goals were once 2% in 1998, 3% in 2001, and 10% in 2003, but later CARB put off clean air progress for 14 years until 2012. As that date draws near, The new target does not even approach the number of vehicles you have previously shown to be possible.

The EV-1 was considered viable by the people that drove it back in 1998. Li-ON batteries are lighter, with increased capacity compared to the Lead-Acid batteries in GM's EV-1, and they're becoming more affordable all the time.

Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backsliding. I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. That is one fifth of the 1998 goal, but at least it is a start. Staff's proposed 840 vehicles a year is an insult. You MUST do better.

Look, I grew up in the San Fernando Valley north of LA in the 1960's. Myself like so many others would run out to the playground at recess, and find ourselves dealing with sharp pains in our chests due to the heavy smog. I couldn't even get a full breath! Something has to be done. This is a health and well-being issue, as well as a US Security issue. Oil demand makes us weak.

As Governor of California, you have the ability to do what California does BEST! Set the Trend! Make California's air clean and breathable by investing your power in the all-important ZEV technology, Electric Cars!!! You've got a Tesla, for crying out loud. Make your stand and do the right thing.

Thank you.

Comment:

Prior to even hearing about this change I've been checking to see if there is a way to purchase a hydrogen powered car. Then I learned that the auto maker (chevrolet) limited sales to Washington DC and metro New York. This plus your possible change will only further our dependence on oil. We as both a community and as a country NEED to move to alternatives.

Subject: ZEV
Comment:

The ZEV goals were once 2% in 1998, 3% in 2001, and 10% in 2003, but later CARB put off clean air progress for 14 years until 2012. As that date draws near, CARB staff proposes to delay again, by cutting the target in 2012 from 0.4% to 0.04%. The new target does not even approach the number of vehicles you have previously shown to be possible. Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backsliding. I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. If that is one fifth of the 1998 goal, but at least it is a start. Staff's proposed 840 vehicles a year is not even a start; it is an insult. You must do better. Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone. I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage.

Subject: ZEV
Comment:

I support your agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like your electric Tesla Roadster.

Unfortunately, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please ask your appointed CARB chair, Mary Nichols, to

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Comment:

To the Carb Board,

Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. If you vote this in you will also not only hurt the environment but will make us more dependent on oil.

Up here in Washington State gas just went to \$3.50 a gallon. Its time to get out of the oil companies back pocket and do the right thing. What about our children and their children. This vote will effect them also. So please vote to save our environment and your children. You will also help the automakers by doing this to.

I do not want to buy a chinese Electric vehicle, but they are coming. So with your vote you can make the automakers of America build electric vehicles once again. So take a chance on your children and the environment.

We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone. I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage.

So now look up here in Washington at what I have done in 6 months. This is just a sample of what you all could start. please go to my website and take a look.

www.pluginolympia.com

I make no money, and ask for none. So if I'am doing this, just think of the outcome if you vote to keep the standards high.

John F. Kennedy once said: Let us resolve to be masters, not the victims, of our history, controlling our own destiny without giving way to blind suspicions and emotions.

You all have the future of America in your hands. Please don't let this opportunity pass you all by.

Thank you for your time and consideration on this History changing event.

Sincerely,

Joe Lambrix

Subject: Zero-Emission Vehicles

Comment:

I am writing you concerning the proposed changes to the Zero-Emission Vehicles mandate. I cannot understand why you would postpone the urgently needed move toward ZEVs in California. It is obvious that these cars are needed to reduce the vast amount of pollution that we are creating with combustion automobiles. There is an obvious market for these vehicles - if even 2% of Prius owners could choose to buy an Electric powered car, there would already be over 20,000 on the road today. Once upon a time California was both the country and world leader in working to prevent pollution and global warming with it's ZEV mandate of the 1990's. At this point, haven't we seen that it was a mistake to abandon the ZEV mandate. There is a market for these cars - the Toyota RAV4 Electric Car which was made based on california's ZEV mandate is now selling USED for \$65,000!! That is over \$20,000 more than it originally sold for.

Please, please do the right thing for California's environment and let us regain our position as the leader in ecologically friendly policy. I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage.

I grew up with EV's and when they left, I was so dissapointed. I drove one over the summer and learned to drive on it. Now, I have to drive a gas car to get around the Midwest because EV's never made it out of California. Isn't California supposed to be the clean, amazing, paradise? It doesn't look that way from Wisconsin. Please change this. Plug in America!

Subject: Clean Car Choice
Comment:

My future and the future of people across America will be heavily affected by your vote on March 27th.

Our climate is rapidly changing, we have . There are more than 700 million vehicles in the world today. It may take several decades to replace them with more efficient and zero-emission vehicles. It's critical that we start immediately!

I am typical of a majority of Americans who want better choices. I am one of the fortunate few who have been lucky enough to experience first-hand that all-electric and plug-in hybrids. I KNOW they work TODAY. As a consumer, I want the choice of driving a clean car.

Please help to make electric vehicles and plug-in hybrids a choice for consumers like me.

I ask you to:

- 1) Require the full 25,000 ZEVs that automakers had promised for 2012-2014
- 2) Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs
- 3) Incentivize plug-in hybrids that have the most on-board electricity storage

Thank you for representing Californians and also all Americans, for clean air and clean cars!

Subject: Please Save America
Comment:

I support your Governors agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs).

Please do not reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

I am asking all the board members of CARB and chair, Mary Nichols, to

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and

2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone. Don't let the Chinese in with their electric cars,. It means money and jobs are going out of America.

Right now is a very unstable time in America and I strongly believe that if you all vote to reduce electric vehicles you all have just made America more dependent on Oil. Do you all really want that. I don't think so.

The American automakers will be just fine with the production of electric vehicles. So saying that please vote to keep the electric here in America where you and I live.

Please give us the choice not the oil company.

Thank you for your time.

Subject: Please give us a more effective Zero Emission Vehicle Program
Comment:

I support California's goal to reduce greenhouse gas emissions by 174 million tons/year by 2020, which means cutting vehicle emissions by about 70 million tons/year. The California Air Resources Board is considering a plan on March 27 that will eliminate an average of only 291,000 tons/year by 2017 through its Zero Emission Vehicle Program. We need more than 200 times that progress by 2020! The plan also eliminates only a fifth of the smog-forming emissions from tailpipes that doom thousands of people to lung disease and death.

It's time for bolder action and a more effective Zero Emission Vehicle Program. Only California is allowed to set tougher tailpipe standards than federal regulations, and other states can follow, so California must lead the way. The nation needs you now.

Please require automakers to offer 100,000 zero-emission vehicles for sale in 2012-2014 (less than 2% of the market) to get us moving in the right direction. That's fewer than 6,000 vehicles per year from each of the six largest car companies. They can do it.

There's no time to wait. Global warming is destroying the planet. Air pollution sickens and kills thousands of people each year. Please support higher numbers of zero-emission vehicles, and get them on the roads soon.

Sincerely,
Kristen Ohiaeri

Subject: Please Support Zero Emission Vehicle Production Requirements

Comment:

Please acknowledge our responsibility as humans by reducing greenhouse gas emissions 25% by 2020! And let's have California show the way for others.

I believe that the best way to do this is to support production of Zero-Emission Vehicles (ZEVs). Please do not reduce the required number of ZEVs by 90%, so that only 2,500 are made available from 2012-2014.

I want to ask Chairperson Nichols to please require manufacture of all 25,000 ZEVs that the automakers promised, and also please include a separate requirement for PLUG-IN hybrids to replace the most polluting vehicles in CARB's regulations, rather than the ZEVs.

This is something that needs to be done sooner rather than later, and it will be a landmark accomplishment for our state!

Subject: electric vehicles
Comment:

Dear California Air Resources Board;

Please do NOT revise the history-making program that was to put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

The most promising way to reach the goal to reduce greenhouse gas emissions 25% by 2020 is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like the electric Tesla Roadster.

Please, Mary Nichols,
1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Please provide a stronger proposal that puts more ZEVs on the roads, and helps move California toward the future.

Sincerely,
William Medina

Subject: Support stronger ZEV program

Comment:

My understanding is that CARB is once again backing off from supporting a strong commitment to EVs in California. As a consulting engineer to both the solar and transportation industry, I know that the technology is here for both all-electric battery EVs (BEVs) and plug-in hybrids.

I strongly urge CARB to:

- 1) Require the full 25,000 ZEVs that automakers had originally promised for 2012-2014
- 2) Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs
- 3) Incentivize plug-in hybrids that have the most on-board electricity storage

Thank you.

Sincerely,
Gregory Glenn

Subject: Requiring zero emission electric vehicles
Comment:

I support any agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like the electric Tesla Roadster, or others that will soon come to market.

Unfortunately, it appears as if the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014. This is unwise and counterproductive.

Please see to it that CARB:

1. Requires the full 25,000 ZEVs that automakers had promised for 2012-2014, and that it:
2. Creates a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Subject: Please support clean air and all-electric vehicles in the upcoming vote

Comment:

I think it's very important for California to lead the other states in clean-air, low emissions vehicles. However, I am worried by so many powerful people's acceptance of hydrogen fuel cell vehicles as the means to that goal. I personally have much more faith in purely-electric vehicles like those made by Tesla and other companies. Battery and capacitor technologies are improving at an amazing pace, and I believe that the next 5 years will bring us a technology that can charge an electric car in about the same time that it takes to fill the fuel tank in a car (look at the advances made by EESor in Austin, TX).

One of the primary advantages of battery-electric vehicles is their ability to be charged anywhere that has a standard power outlet, meaning that an all-electric car could drive from coast to coast today, able to refuel anywhere. Obviously, fully-electric cars would put a strain on the electrical infrastructure of the state, however it seems to me that that strain would be something which would increase steadily and be able to be dealt with across years as more and more electric vehicles were made. In contrast to that, a hydrogen system would require the construction of fueling stations throughout the state before even 1 car would be viable across the entire state.

Obviously, I support the Governor's agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like the electric Tesla Roadster.

I'm very worried that the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please, for the sake of the people of California and of those other states who will follow our lead, stick to your original requirements to have the full 25,000 ZEVs that automakers had promised for 2012-2014. I also believe that there should be a separate requirement created for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs. Hybrids, even plug-in hybrids are not ZEVs.

Choice for consumers means cleaner air for everyone.

Thank you very much for reading my comments.

-- Jeremy Gibson

Subject: Don't back down on Electric Cars !! Consumer awareness has turned.
Comment:

Dear Ms. Nichols,
I support the agenda to reduce greenhouse gas emissions 25% by 2020. One way to reach this difficult goal is to give consumers the choice to buy ZEVs like the electric Tesla Roadster or Toyota RAV-4 EV.

I understand that CARB will vote on a proposal to allow automakers to delay EV production for years-- to reduce the number of ZEVs required of automakers by 90%. This means settling for only 2,500 from 2012-2014!!
DON'T DO THAT.

I ask you to:
1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Auto makers & dealers won big in 2003 when the ZEV mandate was gutted- at the expense of consumers, air quality, and independence from oil. Weak consumer awareness was on their side then.

But today Californians have a strong awareness of what we lost in that 2003 CARB ruling. The auto industry knows that the political mood has turned; consumers are wise to their stunts and have no tolerance left for it.

Do the right thing-- lead the board to REJECT any proposal to reduce the # of ZEVs.

Best regards,
Mark Van Hoomissen

Dear Mary Nichols,

Please get serious, and do the right thing. Increase requirements for ZEV's and Plug-In Hybrids. That's the only way to give consumers a choice to buy Zero-Emission Vehicles.

1. Require the full 25,000 (or more) ZEVs that automakers had promised for 2012-2014, and

2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Thanks, Steve Moeller

Comment:

I support the reduction of greenhouse gas emissions 25% or more by 2020.

Reaching this goal is quite difficult. Your mission is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs) and mandate New vehicle manufactures to offer them

I hope that (CARB)The California Air Resources Board will not reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 for the years of 2012-2014.

1. Mandate the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids.

Subject: Increase the ZEV mandate to 250,000! Don't lower it!
Comment:

I support your agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like your electric Tesla Roadster.

Unfortunately, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please ask your appointed CARB chair, Mary Nichols, to

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014. On second thought let's reverse the proposed trend and require 250,000 ZEVs be built by automakers, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Come on Arnold, If I can convert my Prius to a PHEV in my garage surely the automakers can build them too. Even so, my mild 10 mile Prius PHEV conversion which is good for my wifes local commutes doesn't help me commute 60 miles each day, but a 120 or 140 mile EV sure would! If it could be done 10 years ago, surely it could be done even better and cheaper and on larger scales today.

You must realize that the hydrogen fuel cell that the Terminator was powered by in the movies is just that, a movie prop. EV Batteries on the other hand have been around and in wide use for 100's of years. In the last ten years they have become even more powerful and energy dense. Build us some production facilities for Lithium-ion batteries, give Americans jobs, and lower the price of the remaining expensive piece of electric and plug-in hybrid electric vehicles! Do it by increasing the mandate requirements NOT reducing them!

Choice for consumers means cleaner air for everyone.

L8r
Ryan

Subject: ZEV Goals

Comment:

The ZEV goals were once 2% in 1998, 3% in 2001, and 10% in 2003, but later CARB put off clean air progress for 14 years until 2012. As that date draws near, CARB staff proposes to delay again, by cutting the target in 2012 from 0.4% to 0.04%. The new target does not even approach the number of vehicles you have previously shown to be possible. Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backsliding. I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. If that is one fifth of the 1998 goal, but at least it is a start. Staff's proposed 840 vehicles a year is not even a start; it is an insult. You must do better. Startups alone plan to introduce this many ZEVs; surely the major automakers can do better and not manipulate the system with credits.

I support your agenda to reduce greenhouse gas emissions and clean our air.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), such as these offerings from independent companies AC Propulsion E-Box, Tesla Roadster and the Phoenix Motors BEV sport utility truck.

Reducing the number of ZEVs required of major automakers by 90%, settling for only 2,500 from 2012-2014, would be detrimental to Californians. Not only would it ignore the advances in battery technology, but the exponential growth in consumer interest, no demand, for oil independent non-polluting ZEVs, primarily Battery Electric Vehicles (BEVs).

I ask you chairwoman Nichols and all the CARB board members, to

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

First Name: Mark
Last Name: Intong
Email Address: mark.intong@gmail.com
Affiliation: Department of Navy

Subject: Please make Zero Emission Vehicle (ZEV) Program a more effective tool
Comment:

I support California's goal to reduce greenhouse gas emissions by 174 million tons/year by 2020, which means cutting vehicle emissions by about 70 million tons/year. The California Air Resources Board is considering a plan on March 27 that will eliminate an average of only 291,000 tons/year by 2017 through its Zero Emission Vehicle Program. We need more than 200 times that progress by 2020! The plan also eliminates only a fifth of the smog-forming emissions from tailpipes that doom thousands of people to lung disease and death.

It's time for bolder action and a more effective Zero Emission Vehicle Program. Only California is allowed to set tougher tailpipe standards than federal regulations, and other states can follow, so California must lead the way. The nation needs you now.

Please require automakers to offer 100,000 zero-emission vehicles for sale in 2012-2014 (less than 2% of the market) to get us moving in the right direction. That's fewer than 6,000 vehicles per year from each of the six largest car companies. They can do it.

There's no time to wait. Global warming is destroying the planet. Air pollution sickens and kills thousands of people each year. Please support higher numbers of zero-emission vehicles, and get them on the roads soon.

Sincerely,
Mark S. Intong, Jr.

Subject: Plug in Hybrid Electric Vehicles

Comment:

Dear CARB members:

Even though I am writing to you from outside your jurisdictional area, I would still like to urge you to insist that automobile manufacturers provide the full 25,000 ZEV vheicles that were promised by 2012. I would also urge you to create a separate category for plug in hybrid electric vehicles to replace the internal combustion engine cars rather than allow the hyrbrids to replace some of the ZEVs. Both our countries need to reduce our greenhouse gas emissions and reduce our dependence on oil. As California goes so will my province and country. Please take this leading role that all of North America so desperately needs.

Thank You

Ron Burton

Subject: We want Zero Emissions Vehicles NOW!

Comment:

10 years after the introduction of electric vehicles in California, it is still almost impossible to buy one at a decent price. We are being held hostage by auto manufacturers who prefer to sell SUVs and trucks rather than commercialize electric vehicles. I encourage CARB not to be an accomplice of this practice and help consumers rather than Detroit corporate interests.

The number of Zero Emission Vehicles (ZEVs) proposed by CARB staff will automakers to backslide on their 2003 agreement and require just 2,500 true ZEVs from 2012 to 2014. Startups alone plan to introduce this many ZEVs; surely the major automakers can do better and not manipulate the system with credits. I ask that: (1) you require the full 25,000 ZEVs between 2012 and 2014 that the automakers lobbied for and agreed to in 2003; (2) that you implement a level playing field between all type sof ZEVs to get clean cars on the roads of Califorania; and (3) provide incentives for plug-in hybrids by taking from the dirtiest cars, not the cleanest ones.

Subject: Require the full 25,000 ZEVs that automakers promised!

Comment:

Dear CARB Chairperson,

It is urgent that CARB:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and

2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

I urge you to make sure that these actions are taken as soon as possible!

Sincerely,

Sharon Howard

Subject: Please Support Electric Vehicles!

Comment:

I wholeheartedly support a 25% reduction in greenhouse gas emissions by the year 2020. I believe that the easiest, cleanest, and overall best way to reach that goal is to support the use of electric zero-emission vehicles!

Please push for the full 25,000 ZEVs that automakers had agreed to for 2012-2014, and also create a separate requirement for plug-in hybrids, letting them replace dirty vehicles in CARB's regulations instead of the cleanest ZEVs.

Thanks very much, and I hope that you make a decision with California and the rest of the nation in mind, a decision that supports an environmental future with the use of truly clean electric cars!

Subject: Save the Electric Car!

Comment:

CARB members have the chance to do something that may not benefit themselves, but would definitely benefit those coming behind them--including their own children and grandchildren, friends and neighbors. You can save the electric car.

Please do not vote to cut out, by 90%, the proposed number of ZEV's required to be built. Please make sure that all 25,000 vehicles will be made. Other states look to California for guidance. If we vote to make ZEV's required of automakers, other states will follow suit.

Who knows for certain which technology will prove to be the best? If you slow the process down or stop it altogether, you will have to live with the knowledge that it could have been done better and you had the chance to be on the forefront of the push? Please give ZEV's the full benefit of the doubt and vote to keep the number at the maximum. Lives may depend on it. We ask you to be our voice.

Subject: ZEV Mandate
Comment:

This is the way to reach the goal, give consumers the choice to buy Zero-Emission Vehicles!

The only way that auto manufacturers will offer to the general public what we want and the environment needs is to reinstate the ZEV mandate from a decade ago.

The state government is supposed to represent the people and not let big industry change policies so the they can further their profits at the expense of damaging the environment. The oil industry has quite an influence on what comes out of Detroit but you have the power to give our future generations a breath of fresh, (unpolluted) air.

Don't let the automotive industry dictate what CARB will do. Do the right thing for us all, CARB isn't about industry making money but instead it was put in place to protect the people of Southern California and possibly the rest of the country as well. Please don't let the industry undermine all the good that CARB has done. I know we all need to do our part to make this world a better place for future generations and for ourselves. We must move ahead and force the oil industry from the lordship it has over how we get around in this state.

You have the power to get this started, [again]!

Unfortunately, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Don't let this happen! We can achieve this goal but we must all make sacrifices, so I ask you to do your part is representing the people of California.

Please:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, and don't let them replace the requirement for battery electric vehicles, but rather the dirty gas guzzlers.

A choice for [us] consumers means cleaner air for everyone. Please give us the power to make a difference!

Sincerely,
Dennis Balloy

Subject: Change to the Zero Emissions Vehicle (ZEV) program

Comment:

Dear CARB

The ZEV goals were once 2% in 1998, 3% in 2001, and 10% in 2003, but later CARB put off clean air progress for 14 years until 2012. As that date draws near, CARB staff proposes to delay again, by cutting the target in 2012 from 0.4% to 0.04%. The new target does not even approach the number of vehicles you have previously shown to be possible. Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backsliding. I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. If that is one fifth of the 1998 goal, but at least it is a start. Staff's proposed 840 vehicles a year is not even a start; it is an insult. You must do better. Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone. I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage.

Sincerely,

William Haskell

Subject: ZEV Reduction Decision

Comment:

March 27 will be a historic day for the future of this planet and for ZEV Electric vehicles in this country. You as a board will have the opportunity to move the fight against global warming forward and to help establish ZEVs as a viable form of transportation or to cave in to the interests of the established automobile industry.

Today as alternative automobile upstarts like Tesla, Fisker, Zap, Phoenix etc. are preparing to market all electric or plug-in hybrids we are on a verge of a major shift for the better in the automotive industry. Not surprisingly the large established manufacturers will only be brought into this new era kicking and screaming and digging in their heels. Yet, with crude oil at \$112/barrel and gas prices projected to hit \$4/Gallon we need their help more than ever to free our country from our dependence on oil and to save the planet from the accompanying pollution.

All of America is looking at you as the trend setters the will take us into this new economy. You have a historic responsibility and you will either be praised for years to come for your courage and foresight or maligned for once again caving in and supporting the old order.

It is my hope that you will walk the high road and make the difficult but right choice to not only hold the automakers to their promise of producing the full 25,000 ZEVs that they had promised for 2012-2014, (a requirement that should be well within their means by that time frame) but also create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

The choice is yours and God and history will be your judge.

Best regards,

Stefan Scholz

Subject: ZEV policy
Comment:

On March 27, the California Air Resources Board will revise the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

Your staff has issued a proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what these influential regulators mandated in 2003.

Please produce a stronger proposal that puts more ZEVs on the roads, and helps move California toward the future.

Thanks

Subject: ZEV regulations
Comment:

To whom it may concern:

With regard to the proposed reduction of reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

I lived in Los Angeles for 10 years and have had first hand experience of the emissions pollution at ground level. As many of know, regulation of emissions has had a quantifiable public health benefits. And while the costs to the automakers are a consideration, it should not be the primary factor. Contrary to the dire predictions of economic ruin made by the auto industry, the regulations did not hurt the industry. In fact, the opposite views of the potential impact of CARB policy may occur, our US automakers will actual become leaders in the ZEV technology that will benefit them financially in the long term.

Can you imagine what the quality of life would be in American cities if the catalytic converter had not been adopted? This, I believe, offers a context in which the Board should be evaluating the value of ZEVs to the future of California and the rest of the country.

The science is in. Last year, 2500 leading atmospheric scientists (the IPCC) released a report that recommended large reductions of CO2 emissions over the next thirty years. Embracing ZEV technology could help policymakers to achieve the recommended reductions.

For decades California has been viewed by people all over the world as a social and technical leader. As one of the largest automobile markets in the world, the example CARB sets on this critical forward-looking issue can very positive (or negative) and far-reaching impact well beyond its borders.

Many automakers are going to be releasing ZEV vehicles in the near future and I would encourage the Board to look to the future and expand the program and double the number of ZEV vehicles required. Thank you for you consideration.

Comment:

I support your agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like your electric Tesla Roadster.

Unfortunately, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please ask your appointed CARB chair, Mary Nichols, to

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Subject: The air our kids will breathe

Comment:

A couple short facts: China has better fuel economy requirements than the US. Because of Detroit we have the worst expectation for air quality of any developed nation in the world. With that out of the way, the number of Zero Emission Vehicles (ZEVs) proposed by CARB staff will allow automakers to backslide on their 2003 agreement and require just 2,500 true ZEVs from 2012 to 2014. Start-ups alone plan to introduce this many ZEVs; surely the major automakers can do better and not manipulate the system with credits. I ask that: (1) you require the full 25,000 ZEVs between 2012 and 2014 that the automakers lobbied for and agreed to in 2003; (2) that you implement a level playing field between all types of ZEVs to get clean cars on the roads of California; and (3) provide incentives for plug-in hybrids by taking from the dirtiest cars, not the cleanest ones. It's always been California's role to push the air quality standards for the nation, let's not be more lax than the EU or China. If Detroit doesn't like it, then maybe they should get out of the car business.

-Sean

i beleive it would be wise to figure out a way to ,in every major city, have outskirts city parking lots and rentals of very small (parkmeter pd)2 seater electric cars for city use. The only people driving themselves in the cities should be the multi disabled who don't have electric wheel chairs or scooters and the delivery people.

wheelchairs and scooters should also be redesigned to be weatherproof and go longer distances.

if medical medicaid hospital facilities were asked to have clinics open on weekends for med care, mds do those hours for internship at ER's anyway..

If drivers were given a huge insurance discount for only driving on saturday and sunday. This would also propel many to do adjustments in hours of business and driving and help with traffic congestion and doing the right thing.

These are just beginning ideas, but we need them and many more.

as well as encouragement and incentives to adopt children and adults who need help instead of making more children than the land can support. and leaving those who could ,but for needing help, in the road.

From someone multi disabled you continue to leave in the road
wihtout the scooter....

Subject: Don't Backpedal Now--We Want 25,000 ZEVs by 2014!
Comment:

Time and again Governor Schwarzenegger has promoted "green" technologies as a tool for not only reducing greenhouse-gas emissions but as an engine of prosperity for California: creating well-paying, high-tech jobs within the state as we pioneer tomorrow's technologies. This is true with electric cars as well--AC Propulsion, which is now converting Scions to electric power, is just down the freeway from Pasadena in San Dimas, CA.

The public is ready for ZEVs. Priuses and other hybrids are selling like hotcakes; some enterprising owners are even converting them to plug-in hybrids themselves, rather than waiting for Toyota to get around to manufacturing them. Now is not the time to let the Big Three off the hook yet again. They fought seat belts, they fought air bags, and they probably fought turn signals when they were first required. They could build ZEVs if they really wanted to, and the only way they'll want to is if there's an assured market.

So, Ms. Nichols, please:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

I support your agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like your electric Tesla Roadster.

Unfortunately, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please ask your appointed CARB chair, Mary Nichols, to

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Subject: Strengthen the Zero Emission Vehicle Program

Comment:

Dear Chairwoman Nichols,

I would really like to have the option of driving an affordable electric or plug-in hybrid vehicle. I believe that the auto industry is blind to the demand and calcified in it's ways. It is up to CARB to give them the kick in the pants they need. Please strengthen the ZEV Program.

Specifically, I ask that CARB require at least the full 25,000 ZEVs that automakers had promised for 2012-2014. Please create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs. And finally, create incentives for plug-in hybrids that have the most on-board electricity storage.

We need cleaner alternatives and ZEV's and plug-in hybrids can be made today to offer that alternative. CARB needs to push automakers out of their old world thinking.

Thank You,
Charles Sowers

Subject: To EAA
Comment:

The ZEV goals were once 2% in 1998, 3% in 2001, and 10% in 2003, but later CARB put off clean air progress for 14 years until 2012. As that date draws near, CARB staff proposes to delay again, by cutting the target in 2012 from 0.4% to 0.04%. The new target does not even approach the number of vehicles you have previously shown to be possible. Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backsliding. I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. If that is one fifth of the 1998 goal, but at least it is a start. Staff's proposed 840 vehicles a year is not even a start; it is an insult. You must do better. Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone. I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage. The number of Zero Emission Vehicles (ZEVs) proposed by CARB staff will automakers to backslide on their 2003 agreement and require just 2,500 true ZEVs from 2012 to 2014. Startups alone plan to introduce this many ZEVs; surely the major automakers can do better and not manipulate the system with credits. I ask that: (1) you require the full 25,000 ZEVs between 2012 and 2014 that the automakers lobbied for and agreed to in 2003; (2) that you implement a level playing field between all type sof ZEVs to get clean cars on the roads of California; and (3) provide incentives for plug-in hybrids by taking from the dirtiest cars, not the cleanest ones.

Subject: Zero Emission Vehicle (ZEV) Program
Comment:

I support California's goal to reduce greenhouse gas emissions by 174 million tons/year by 2020, which means cutting vehicle emissions by about 70 million tons/year. The California Air Resources Board is considering a plan on March 27 that will eliminate an average of only 291,000 tons/year by 2017 through its Zero Emission Vehicle Program. We need more than 200 times that progress by 2020! The plan also eliminates only a fifth of the smog-forming emissions from tailpipes that doom thousands of people to lung disease and death.

It's time for bolder action and a more effective Zero Emission Vehicle Program. Only California is allowed to set tougher tailpipe standards than federal regulations, and other states can follow, so California must lead the way. The nation needs you now.

Please require automakers to offer 100,000 zero-emission vehicles for sale in 2012-2014 (less than 2% of the market) to get us moving in the right direction. That's fewer than 6,000 vehicles per year from each of the six largest car companies. They can do it.

There's no time to wait. Global warming is threatening the planet. Air pollution sickens and kills thousands of people each year. Please support higher numbers of zero-emission vehicles, and get them on the roads soon.

Sincerely,

Vince Cukrov

Subject: Please Increase Requirements for Zero Emission Vehicles

Comment:

It is my understanding that on March 27th, the California Air Resources Board (CARB) will revise its Zero Emission Vehicle (ZEV) Program, which put more than 5000 electric cars on the roads and avoided more than 1 million metric tons of carbon dioxide emissions (even when factoring in power plant emissions). In 2003, however, changes to the ZEV Program allowed electric cars to disappear as long as automakers promised to produce 25 thousand ZEVs in 2012-2014 and 50 thousand in 2015-2017. Now the automakers want out of that promise, and CARB is allegedly going to vote to weaken the Program again.

California is the only state allowed under the Clean Air Act to set tougher limits on vehicle emissions than federal regulations. Several states choose to follow California's standards, and at least 10 states are looking to us to set stricter limits so that they can follow suit. The CARB vote has national implications.

The Tesla Roadster is now going into regular production, and various small electric vehicles are out on the roads. It is time to bring back the '90s mandate for true zero-emission vehicles. We need CARB's help to make sure that mass-affordable clean cars hit the market soon. Please do not weaken the ZEV Program.

Many thanks,

R.M. 'Auros' Harman

Subject: Electric Cars, we need them

Comment:

I support the agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs). Unfortunately, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please support Mary Nichols, to

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Comment:

Mary Nichols, CARB Chairwoman

Dear MARY NICHOLS,

I am writing today ~ March 18, 2008 ~ to urgently request that you:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Let me know if there is any way my organization can help yours push for these cleaner objectives!

Subject: Please support re-development of the electric car
Comment:

To the California EPA Air Resources Board-

I'm from Illinois, thousands of miles away, but I am just one of many people passionate about reducing our dependence on foreign oil and cleaning the air.

For years, California has in essence set the standard for much of what the rest of the country does: it produces films seen around the world, and promotes a culture that could be described as "uniquely American."

Won't you please be the leader, and set the standard for clean air high-and now? Too many people in your own state are getting sick because of pollution; the EV1 promised to change that, but was cut short far too soon. Years later, people are wondering why electric cars aren't on the market, when they worked so well for so many. I for one would purchase one if it became available in my price range.

And I ask you, please don't reduce the number of ZEVs required of automakers by 90%, as has been remarked elsewhere-this is not only unfair to those people who who would buy them (probable inflated price due to high demand/short supply), but it also will undermine the effectiveness of any clean air endeavors, for years to come.

Please require the full 25,000 ZEVs that automakers had promised for 2012-2014, and create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

We in the rest of the country are counting on you to do what is right for the people-please don't let pressure from the auto industry make your choices for you.

Thank you!

Michelle Langhout

Subject: ZEV 2008
Comment:

I support California's goal to reduce greenhouse gas emissions by 174 million tons/year by 2020, which means cutting vehicle emissions by about 70 million tons/year. The California Air Resources Board is considering a plan on March 27 that will eliminate an average of only 291,000 tons/year by 2017 through its Zero Emission Vehicle Program. We need more than 200 times that progress by 2020! The plan also eliminates only a fifth of the smog-forming emissions from tailpipes that doom thousands of people to lung disease and death.

It's time for bolder action and a more effective Zero Emission Vehicle Program. Only California is allowed to set tougher tailpipe standards than federal regulations, and other states can follow, so California must lead the way. The nation needs you now.

Please require automakers to offer 100,000 zero-emission vehicles for sale in 2012-2014 (less than 2% of the market) to get us moving in the right direction. That's fewer than 6,000 vehicles per year from each of the six largest car companies. They can do it.

There's no time to wait. Global warming is threatening the planet. Air pollution sickens and kills thousands of people each year. Please support higher numbers of zero-emission vehicles, and get them on the roads soon.

Subject: Support the ZEV Mandate
Comment:

I support your agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs).

Please do not reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014. Even mandating 25,000 vehicles is a compromise, but progress nonetheless.

I, along with thousands of other citizens, am asking that the Air Resources Board:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

American auto manufacturers have proved that they are capable of producing highly performing electric vehicles, after the original mandate was instated. We can do even better, and the Board has the power of influence.

Certainly the ZEV Mandate is an important facet of the California governmental response to global warming, among landmark bills like AB 32 and SB 1 from recent legislative years. CARB is charged with the duty to protect the quality of air, a most essential component in the ecological commons. Industry can actually be a partner in this responsibility to preserve and improve air quality.

The Cabrillo College Student Senate, representing 15,000 students, will discuss and take a stance on the issue this week. I ask that CARB take this into consideration when it deliberates on March 27.

Thank you,
Ryan Kaplan
Legislative Representative,
Cabrillo College Student Senate

Subject: Make automakers do what they said they would.

Comment:

I have been frustrated in my effort to purchase an environmentally clean electric vehicle for nearly three years now. I continually bid on used electric vehicles on eBay and lose because demand for these five year old vehicles is so great the price is driven to \$50-60K.

The automakers said last year at the CARB public input that they are UNABLE to build electric vehicles because the technology isn't there yet. Do you really believe they are so inept that they can not build a car now that they already build five years ago.

Based on my experience in the electric vehicle marketplace, I can say 150 electric vehicles a year will not meet the current demand for electric vehicles. Buyers from other states will compete with Californians for these vehicles.

I support your agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like your electric Tesla Roadster.

Unfortunately, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please ask your appointed CARB chair, Mary Nichols, to

Subject: Support for PHEV's
Comment:

Dear ARB,

Some of the ISOR proposals tend to motivate Plug In Vehicles (PHEVs) at the expense of BEVs (battery-electric vehicles), implying a choice that reflects the Board's view that BEVs are significantly less near-term than PHEVs.

I believe that it is a major mistake to pit these two complementary approaches against each other, requiring that incentives for one come from the allocations of the other. And the perspective flies in the face of the reality that several major carmakers have announced their intentions to mass-produce BEVs within the next five years (along with PHEVs).

Here's what Plug In America, CalCars and other organizations are calling for:

- Require the full 25,000 ZEVs that automakers had promised for 2012-2014;
- Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs;
- Incentivize plug-in hybrids that have the most on-board electricity storage.

Please continue to lead our state by strengthening your staff proposal and getting more electric cars on the road.
Thank you.

Form Letter 211 for Comment 28 for ZEV 2008 (zev2008) - 45 Day.

First Name: Russell

Last Name: Sydney

Email Address: main@sustainableclub.org

Affiliation: Medium Speed Electric Vehicle Group

Subject: Getting 100,000 ZEVs on the road within three years

Comment:

Dear CARB:

Thank you for your work to bring Zero Emission Vehicles to our state.

We are a group of people who are eager to drive such vehicles as well as a group of ZEV manufacturers who are able to produce and deliver these vehicles in quantity. Our group is called the Sustainable Transport Club and we are coordinating the Medium Speed Electric Vehicle Working Group.

There is a way to put as many as 100,000 ZEVs on the road within two years of having regulatory support for these Second Car Vehicles. Two minor adjustments in the ZEV regulations would help this to happen. These adjustments are:

1. To change the range for a City EV from the proposed 50 to 75 miles per charge to 40 to 75 miles per charge.
2. To Change the battery warranty requirements for this group to 3 years for the first three years of production and have it increase to five years after that.

The hard reality is that the only ZEVs being sold are battery electrics with limited speed and limited range. The reality of the current technology is that our manufacturers can produce substantial volumes of vehicles with forty-mile range and up to 45 miles per hour speeds. That is what can be put on the market right away and there is research to indicate that a volume market for ZEVs can be established within these limits.

The current ten-year battery life requirement is adding unnecessary risk to these manufacturers who are putting everything on the line to get ZEVs on the road NOW. It also means that only very expensive newer technology can be used for the next battery electric ZEVS. That expense will limit the number of ZEVs on the road.

Market research is showing that a set of Second Car Specifications is taking shape. People are commuting an average of 30 miles per day in LA City. The average vehicle drives 33 mile a day in the US. Congestion is slowing traffic on both surface roads and freeways so that the actual rate of travel is dropping significantly. Urban areas like the Westside of LA are at the point when a 35-mile per hour vehicle can get around town as fast as any full speed passenger car. Those that go faster than thirty-five wait (not so) patiently at stop lights for the 35 mph

vehicles to catch up to them.

The bottom line is that a very large number of people drive less than 40 miles per day and get around at 35 mph or less. There are close to a dozen manufacturers who can produce ZEVs that match this need at very affordable prices. These ZEVs are four-wheel cars with doors and roll cages and most of the safety features of a passenger car. They are the next step up from a NEV and miles away from being a golf cart. They are far safer than three wheel cars and motor scooters. These manufacturers can produce in excess of 100,000 vehicles a year within a year of getting regulations and safety specifications that make sense for a 35 mph vehicle.

That brings us to the second thing that the Air Resources board can do to help actually get ZEVs on the road in the next two years. That is to help get regulations passed to make this possible including:

1. State Regulations that call for the correct mix of safety features for vehicles that are limited to going 35 miles per hour on streets limited to 35 miles per hour
2. Federal Regulations that lay out the safety requirements needed at 35 miles per hour and that eliminate the FMVSS requirements that are only needed for vehicles capable of going 80 miles per hour.

The 35-mile per hour speed is being used for several reasons.

1. Arterials in most cities support full access to the city at that speed limit
2. It allows these vehicles to stay with the flow of traffic
3. Air bags deploy between 33 and 38 miles per hour in single car accidents
4. Air bags are the biggest safety expense in a car by several orders of magnitude

It may be appropriate to add some speed requirement to the City EV specification to distinguish them from the NEVs. A simple statement that the "City EV has a top speed set by the manufacturers in excess of 25 mph" would suffice and avoid a large discussion of what the best speed is for such a vehicle. Manufacturers cannot set that speed without federal regulations to support that.

The manufacturers in our group are also working to get the 35-mile per hour regulations needed for this Second Car Option. The big issue is to do with safety and federal safety experts will probably resolve that concern.

The forty-mile range specification is one that is being used by GM as the base range for battery use in the Volt. It is also the one that is being used by most of the Plug in Hybrid engineers. This specification is used because these companies have done their homework and know that the Second Car specification is based in real market demand. Adjusting this figure would put your regulations in line with what the market actually needs.

It may not sound like there is a big difference between 40 and 50 mile range. The perspective from the battery side may help. That is a 25 percent increase in performance and weight on a technology that has been optimized over a hundred years. New technologies are a quantum leap in cost with unproven records. Forty mile range is actually a challenge for some of the manufacturers.

Consider that some large percentage of homes in California have more than one car. One car for long trips is good to have and use whenever someone needs to go more than 40 miles. The other cars in the household can all be used around town at 35 miles per hour to get things done. This includes at least one person's commute, getting to school and to soccer practices. Errands around town are all done easily in such vehicles. If as many as half the households have this situation then that means the second car option would allow us to replace fully one quarter of the cars with ZEVs using technology available right NOW.

Given that it will take time to get people to change their thinking and their ways it is still very reasonable to think we can get 100,000 vehicles in the market as Second Vehicles in short order. This is particularly true when you consider that the energy cost for such vehicles is around 1 1/2 cents per mile.

In case you have not had a chance to live with an EV, the specification works because EVs are fundamentally different from liquid fueled vehicles. A range of 200 miles plus is needed for a liquid fuel vehicle so that people do not have to stop at gas stations all the time. With an EV your home is your gas station and you leave every morning with a full "tank of gas" (meaning a full charge). IF you drive less than forty miles that day you still have plenty of "gas" to get home.

Our people trust that you will choose to adjust your regulations and get ZEVs on the road rather than keep the figures you have and wait for reality to catch up to your ideas. The environment and our energy security may not have the time to wait for a more perfect solution.

Thank you for considering these concerns.

Sincerely Yours

Russell Sydney
Coordinator for the Medium Speed Electric Vehicle Working Group
Principle Organizer for the Sustainable Transport Club.

Subject: Please Don't Delay Meaningful EV Production
Comment:

To Mary Nichols,

I respectfully ask that CARB require the full 25,000 ZEVs that automakers had promised for 2012-2014, and create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Sincerely,
Erik Nelson

Subject: Zero Emission Vehicle program
Comment:

Dear Air Resources Board:

The California Air Resources Board (CARB) on March 27 will revise its Zero Emission Vehicle (ZEV) Program, which put more than 5,000 electric cars on the roads and avoided more than 1 million metric tons of carbon dioxide emissions (even when factoring in power plant emissions). In 2003, however, changes to the ZEV Program allowed electric cars to disappear as long as automakers promised to produce 25,000 ZEVs in 2012-2014 and 50,000 in 2015-2017. Now the automakers want out of that promise, and CARB will vote on a proposal to weaken the Program again.

As a citizen concerned with air quality and global warming, both of which are negatively impacted by CO-2 emissions, I request that you take this opportunity to strengthen our state's ZEV Program, both to help Californians and to set an example which other states can and will follow.

Yours truly,
Julie Spickler

Comment:

The ZEV goals were once 2% in 1998, 3% in 2001, and 10% in 2003, but later CARB put off clean air progress for 14 years until 2012. As that date draws near, CARB staff proposes to delay again, by cutting the target in 2012 from 0.4% to 0.04%. The new target does not even approach the number of vehicles you have previously shown to be possible. Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backsliding. I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014. If that is one fifth of the 1998 goal, but at least it is a start. Staff's proposed 840 vehicles a year is not even a start; it is an insult. You must do better. Please don't allow the Zero Emission Vehicle (ZEV) Program to backslide by giving up 90% of the ZEVs promised by automakers and settling for only 2,500 vehicles from 2012-2014. We need ZEVs, and we also need plug-in hybrids. More options for consumers mean cleaner air for everyone. I ask you to (1) re-commit to the full 25,000 ZEVs the automakers promised, (2) create a separate requirement for plug-in hybrids that lets them replace dirtier vehicles, and (3) provide incentives for plug-in hybrids that have the most on-board electricity storage.

Comment:

I support reducing greenhouse gas emissions.

Consumers need the choice to buy Zero-Emission Vehicles (ZEVs).

Please do not reduce the number of ZEVs required of automakers.

Instead:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Subject: ZEV guidelines
Comment:

Dear CARB and Governor Schwarzenegger:

Considering CARB's role in killing the electric car thanks to its ill-fated support of hydrogen technology, which has yet to materialize, over plug-in electric cars, it is exceedingly important for CARB not to repeat that mistake with its upcoming rulings. Both plug-in hybrid and full electric vehicles should be supported by the upcoming rules. These technologies should not be pitted against each other.

Please follow the stated goals of Plug-In American and CalCars.org:

- * Require the full 25,000 ZEVs that automakers had promised for 2012-2014
- * Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs
- * Incentivize plug-in hybrids that have the most on-board electricity storage

Thank you very much for the opportunity to comment.

The number of Zero Emission Vehicles (ZEVs) proposed by CARB staff will allow automakers to backslide on their 2003 agreement and require just 2,500 true ZEVs from 2012 to 2014. Startups alone plan to introduce this many ZEVs; surely the major automakers can do better and not manipulate the system with credits. I ask that: (1) you require the full 25,000 ZEVs between 2012 and 2014 that the automakers lobbied for and agreed to in 2003; (2) that you implement a level playing field between all type sof ZEVs to get clean cars on the roads of California; and (3) provide incentives for plug-in hybrids by taking from the dirtiest cars, not the cleanest ones.

Everyone wants a hybrid, even if they do not realize it. I'm sure even truck hybrid sales will boom over the all gas option once people are told it is the same vehicle, just triple the gas mileage.

I will never buy another gas vehicle. My next car MUST be more efficient than my Prius. Conversions are being done by independent companies across the US to give mileages of 140 mpg. Big car companies are not supposed to dictate what we desire in a vehicle. The public dictates ZEVs or plug in hybrids or we will not purchase from you! Don't allow them to delay longer. It's an embarrassment to US technology.

Subject: CARB's support for a strong ZEV program

Comment:

I urge Gov. Arnold Schwarzenegger to ask CARB to stand up for a strong ZEV program!

I ask CARB to:

Require the full 25,000 ZEVs that automakers had promised for 2012-2014;

Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs;

Incentivize plug-in hybrids that have the most on-board electricity storage.

I personally had the opportunity to occasionally drive an all-electric GMC EV-1 during a period of 1 1/2 years and found the car to have great handling & acceleration. It was a joy to drive & I felt great about driving a pollution-free vehicle. I was quite disappointed when I learned the vehicle would have to be surrendered at the end of the three-year lease so that it could be collected and destroyed by GMC. I realize the development of an all-electric vehicle is not an easy one but found it hard to believe the elimination of these EV-1 vehicles from availability to California consumers during a time of rising gas prices, especially now that I see the price of a gallon of gas approaching \$4 per gallon and realizing \$5 per gallon may not be that far away in the future. I believe the development of alternative "fuels" to power vehicles is critical, especially when the use of these "fuels" contributes less to the pollution of our environment.

Again I urge Gov. Arnold Schwarzenegger to ask CARB to stand up for a strong ZEV program! Thank you.

Subject: emission standards
Comment:

I support California's goal to reduce greenhouse gas emissions by 174 million tons/year by 2020, which means cutting vehicle emissions by about 70 million tons/year. The California Air Resources Board is considering a plan on March 27 that will eliminate an average of only 291,000 tons/year by 2017 through its Zero Emission Vehicle Program. We need more than 200 times that progress by 2020! The plan also eliminates only a fifth of the smog-forming emissions from tailpipes that doom thousands of people to lung disease and death.

It's time for bolder action and a more effective Zero Emission Vehicle Program. Only California is allowed to set tougher tailpipe standards than federal regulations, and other states can follow, so California must lead the way. The nation needs you now.

Please require automakers to offer 100,000 zero-emission vehicles for sale in 2012-2014 (less than 2% of the market) to get us moving in the right direction. That's fewer than 6,000 vehicles per year from each of the six largest car companies. They can do it.

There's no time to wait. Global warming is threatening the planet. Air pollution sickens and kills thousands of people each year. Please support higher numbers of zero-emission vehicles, and get them on the roads soon.

Sincerely,

sigrid mclaughlin
445 high St.
santa cruz, CA 95060

Subject: March 27, 2008 ZEV Program Proposal
Comment:

To whom it may concern:

What happened to the EV1 and other all electric vehicles on April 24, 2003 was an absolute disgrace. California was leading the way into the future of automotive technology. A future free of foreign oil and polluted air. Instead, by backing down, automakers were allowed to literally scrap their EV car programs.

On March 27, you have the opportunity to stand fast versus automakers and oil companies.

Please require the full 25,000 ZEVs that automakers had promised for 2012-2014, and create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

America needs strong leaders to brave the path to a clean future. It starts with you. Please don't let the same mistake be made twice. EV and PHEV vehicles can be made today. The technology exists today, not in the future. Don't fall prey to the hydrogen dream.

The future starts now. Lead the way and America will follow.

Subject: Reducing ZEV requirements
Comment:

I strongly oppose reducing the goal of 25,000 pure ZEVs on California's roads between 2012 and 2014. In fact, it should be increased.

The automakers have proven electric vehicles can be viable, and battery technology has improved dramatically since the late 1990s. Just look at how many Toyota Prius vehicles are on the road, when they cost \$10,000 more than their Yaris, which gets nearly the mpg of the Prius. The American people are willing to pay more, and any available tax incentives make it that much easier on the public.

The ZEV goals were originally 2% in 1998, 3% in 2001, and 10% in 2003, but later CARB put off clean air progress for 14 years until 2012. Why? As that date draws near, CARB staff proposes to delay again, by cutting the target in 2012 from 0.4% to 0.04%. The new target does not even approach the number of vehicles previously shown to be possible. Today we have better technology and significantly raised consumer awareness, so there is no excuse for this backwards move.

I ask that you put 25,000 pure ZEVs on California's roads between 2012 and 2014, even more if CARB is willing to push for it. Even though that is one fifth of the 1998 goal, it is a start. Your staff's proposed 840 vehicles a year is not even a start; it is an insult. Please do better, and please push pure electric vehicles over Hydrogen, which is the least efficient of all alternative energies. Please do this for all of us.

Subject: Electric Cars
Comment:

I urge Chair Nichols--and the other CARB members--to support production of electric vehicles. This is automotive technology that could work NOW to help clean our air and cut CO2 emissions.

As gasoline prices lurch toward the \$4.00 per gallon mark, let's all work together to hasten the day when we can dump the pump and start driving clean, efficient electric cars.

Let's work toward the Governor's objective of reducing greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs).

Do NOT reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please DO:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

Thanks in advance for your support!

Subject: ZEV2008
Comment:

We strongly support efforts to reduce greenhouse gas emissions 25% by 2020.

A good way to get started towards this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like the electric Toyota RAV4EV that we own and the Tesla Roadster we have on order.

We are greatly concerned when we see that the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

To maintain progress CARB needs to:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014.
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Sincerely,

Tim & Vibeke Hastrup

Subject: Proposal to Amend ZEV Production Standards
Comment:

Dear Ms. Nichols:

I am writing you urge you to maintain Zero Emission Vehicle (ZEV) production requirements in the State of California at the highest possible levels. California has always been a national leader in anti-pollution law making and a leader in innnovation influencing the rest of the country. The California Air Resources Board (CARB) contemplation of reducing the ZEV production requirement to 150 ZEVs per year through 2015 is outrageous and unconscionable given the current concerns around greenhouse gas emissions; America's oil dependence and the price gouging that is currently taking place at the pumps.

We have the technology to develop reliable ZEVs now and auto industry needs the incentive to start ZEV production. Don't be a sellout to the auto industry by lowering ZEV requirements and do the following:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Thank you for your attention.

Sincerely,

Scott Stevenson

Subject: VOTE YOUR CONSCIENCE
Comment:

We all know that any decision that does not mandate more highway able production line electric cars is a blatant choice to line the pockets of corporate officials and politicians and a criminal choice to continue to pollute the air. WHICH is exactly what you as a member of the California Air Resource Board are getting paid to combat.

Make the right choice. Do your job. Vote for a strong ZEV mandate NOW and spare your children and grandchildren from having to clean up our mess.

I hope you don't fool yourself. This choice, this vote, here in California, today March 27th 2008, will influence the world.

On behalf of my children's generation and all generations future and present, I am begging you to take the biggest stand of your life. Out of the people in our world you and this small group of people at CARB can take the largest bite out of the pollution machine that is America, right here, with this vote.

CARB has done it before and can do it again. Tell the worlds car manufacturers that if they want to sell cars in California they will need to make practical ZEV's now.

PLEASE VOTE TO:

- * Require the full 25,000 ZEVs that automakers had promised for 2012-2014
- * Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs
- * Incentivize plug-in hybrids that have the most on-board electricity storage

Thanks for your time in reading this.

Sincerely,
Willie Kazakoff

Comment:

I support an agenda to reduce greenhouse gas emissions 25% or more by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs). But ZEVs, as we know, will not be voluntarily produced by the manufactures unless their are incentives and mandates in place.

Unfortunately, I am told, you may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

This is unacceptable.

Please, I ask that you:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone. And as we all know a continued reliance of fossil fuel energy poses a critical national security problem for the United States as well as a dire health concerns for planet Earth and its inhabitation.

Subject: CLEANER AIR FOR CALIFORNIA !!
Comment:

Dear CARB,

I support your agenda to reduce greenhouse gas emissions 25% by 2020. I believe that we can do even more, but this is a good starting place.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like the electric Tesla Roadster, the Toyota RAV4-EV, and others currently in development.

Unfortunately, the California Air Resources Board's consideration of a proposal to reduce the number of ZEVs will lead us away from the goal of having cleaner air in California!

To lower the requirement of automakers by 90%, settling for only 2,500 from 2012-2014, will seriously impact the choice of the consumer.

Please represent my views to CARB:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that encourages the automakers to replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

It is time that CARB strengthen the Zero Emission Mandate. Battery-Electric vehicles, and those that run entirely on CNG, have already helped to dramatically reduce the air pollution in this state, and the public health will certainly benefit by promoting their use in the future.

Choice for consumers means cleaner air for everyone.

Thank you for your consideration

Sincerely,

Martin Rosenstock

Subject: Proposed Modifications to the Zero Emissions Vehicle Mandate
Comment:

23 May 2008
To: California Air Resources Board
Re: March 27 Hearing on Modifications to Zero Emissions Vehicle Regulation.

My family currently drives two Zero Emission Electric Vehicles that were made available by major automakers earlier this decade to meet California's Zero Emission Vehicle Regulation. Like many other electric vehicle drivers, our cars are powered by electricity from our roof top solar array with no emissions at all. Unfortunately due to weakening of this regulation in 2003, this option has not been available to California consumer's for several years.

It seems that the Air Resources Board is taking the position that the Zero Emissions Vehicle program should be viewed as a research program, rather than as it was originally intended, to put a significant number of zero emissions vehicles on California roads.

Much has changed since 1990, but the stakes are now higher, not lower, than they were at the program's inception. Increasing numbers of vehicles as well as increases in vehicle size and power have undermined reductions in tailpipe emissions, and our increased understanding of global warming emissions has led to new efforts at both the state and federal level to reduce carbon dioxide emissions.

The ZEV regulations should be the cornerstone of California's efforts to change our transportation fuel use in ways that benefit our economy, the health of the public, and the environment, but CARB's recent efforts seem intended to relegate it to the sidelines of our regulatory efforts. The experience of thousands of electric vehicle drivers over the last decade, has shown that what is needed is not research and development, but initiation of limited volume production in order to decrease materials costs and increase consumer acceptance. Unfortunately CARB's suggested modifications will further delay progress in this vital area.

I am asking the board to direct staff to modify the proposed regulatory changes to:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

It's time that every Californian has the choice that my family

had, to drive emission free.

Subject: Bring Back the Zero Emissions Mandate

Comment:

Eighteen years ago, the California Air Resource Board (CARB) adopted the Zero Emission Vehicle (ZEV) Mandate, a groundbreaking requirement resulting in nearly 5,000 zero emissions cars placed on our roads. These are cars that emit no smog-forming, cancer-causing, or greenhouse gas effect-producing pollutants! Many of these cars are still driving today, undeniable proof that plug-in battery-electric cars can work: decades-old technology was able to produce cost-effective, reliable, functional cars that both residents and fleet customers wanted to use.

We all know what happened next: CARB caved to political pressure and the threat of lawsuit, allowing auto manufacturers to dismantle their viable electric vehicle programs, shred their waiting lists for new electric vehicles, and repossess their leased vehicles. Most of the repossessed vehicles were needlessly destroyed in an unfortunate attempt to obliterate any record these vehicles worked. CARB allowed automakers to continue to poison our environment and chain future generations to continued oil addiction with over-promoted yet profitable gas-guzzling SUVs, without requiring a single pure zero emissions vehicle to be placed on the road as mitigation.

On March 27, CARB will consider staff-proposed revisions to the ZEV program that unfortunately allow automakers to continue to get away with murder. Twenty years after the mandate was initially adopted, CARB will only require automakers to produce half as many truly zero emissions vehicles - 2,500 - as were developed in response to the original mandate. This doesn't make any sense - battery technology has only advanced, several automakers have already announced plans for plug in hybrid electric vehicles capable of pure electric mode, and a number of start-up companies are developing advanced battery electrics such as Tesla, ZAP, Phoenix MotorCars, Aptera, Th!nk, and countless others. Since then California's population has increased over 25%, putting more cars on our roads. Why roll back requirements when we need to be boldly driving forward?

Therefore, we request that CARB adopt the following revisions to the staff proposal:

- Ø Retain the requirement for automakers to produce no less than 25,000 truly zero emissions vehicles by 2012
- Ø Create additional incentives for start up companies developing battery electric vehicles, including streamlined permitting, grants and loans, etc.
- Ø Revise the rules for Neighborhood Electric Vehicles to allow a 35 mph top speed. This minor change can significantly increase

the demand for such vehicles and make these vehicles more useful for average residents.

Subject: Please promote electric vehicles
Comment:

Dear Chairman Nichols, and the board of CARB.

The California Air Resources Board (CARB) has a long history of leading the world in establishing high standards that have made the air cleaner for everyone. Among its many accomplishments, nearly 12 years ago, CARB had the courage to create the Memorandum of Agreement (MOA) in which the big seven automotive manufacturers committed to manufacture and sell Zero Emission Vehicles (ZEVs). Our family has been one of the fortunate few to actually obtain full function Battery Electric Vehicles that were created under the MOA, and over the past 9+ years have driven nearly 100,000 miles in them and continue to do so today.

In the years since the MOA was created, technology has advanced and now both pure Battery ZEVs and Plug-In Hybrids offer the best chance to reduce greenhouse gas, our reliance on foreign oil and improve our air quality in California, and around the country.

I support the Governor's agenda to reduce greenhouse gas emissions 25% by 2020. The most promising way to reach this goal is to give consumers the choice to purchase Zero-Emission Vehicles (ZEVs) and Plug-In Hybrid Vehicles (PHEV's).

Unfortunately, CARB may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please reconsider the current planned CARB recommendations and:

1. Require the full 25,000 Type II ZEVs that automakers had committed to for 2012-2014-and make them available for purchase and/or lease with option to purchase.
2. Create a separate requirement for Plug-In Hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Please ask the entire California Air Resources board to show the same bold leadership by promoting choice for consumers by maintaining the full ZEV requirement in what was planned for the 2012-2014 time period.

Choice for consumers means cleaner air for everyone.

Thank you.

Larry Paul

Comment:

Dear Chairman Nichols, and the board of CARB.

The California Air Resources Board (CARB) has a long history of leading the world in establishing high standards that have made the air cleaner for everyone. Among its many accomplishments, nearly 12 years ago, CARB had the courage to create the Memorandum of Agreement (MOA) in which the big seven automotive manufacturers committed to manufacture and sell Zero Emission Vehicles (ZEVs). Our family has been one of the fortunate few to actually obtain full function Battery Electric Vehicles that were created under the MOA, and over the past 9+ years have driven nearly 100,000 miles in them and continue to do so today.

In the years since the MOA was created, technology has advanced and now both pure Battery ZEVs and Plug-In Hybrids offer the best chance to reduce greenhouse gas, our reliance on foreign oil and improve our air quality in California, and around the country.

I support the Governor's agenda to reduce greenhouse gas emissions 25% by 2020. The most promising way to reach this goal is to give consumers the choice to purchase Zero-Emission Vehicles (ZEVs) and Plug-In Hybrid Vehicles (PHEV's).

Unfortunately, CARB may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

Please reconsider the current planned CARB recommendations and:

I plead for three things.

1. Please hold car makers to their 2003 promise to deliver 25,000 vehicles starting in 2012. Don't allow your staff to water it down 90%.

2. Create a separate category for plug in hybrids (PIH) with 40 mile ZEV range. I was shocked at EVS-20 to hear PIHs are treated under the worst pollution mode and not their best mode. The rationale was "it is not a pure ZEV" -- ideology was more important than being tech neutral. One's ideology is another's idiot logic. Fix it.

3. Reduce the 10 year battery warranty to 5 years but prorated over 10 years. Congratulations, you have yet another way to kill the ZEV.

If you don't do these things, it will be clear that all the CARB and its staff have learned from the movie, Who Killed the Electric Car, is "how easy it is to get away wiith it" again.

Comment:

I strongly support Governor Governor Arnold Schwarzenegger's plan to reduce greenhouse gas emissions 25% by 2020. One of the most promising ways to reach this goal is to allow consumers to buy Zero-Emission Vehicles (ZEVs), like the Tesla Roadster.

Thus, I urge CARB chair, Mary Nichols and CARB to resist pressure from automakers to reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014. This is significantly fewer ZEVs than the 25,000 ZEVs these the CARB bravely mandated from automakers for 2012-2014.

I further ask that CARB create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Please do not dilute agenda item 08-3-5. The technology is available now. As an example, DeWalt lithium 36V batteries for power tools. These types of batteries can be used now. See "you Tube, electric bicycles". A man is using these to power an electric bike, and gets good mileage. If it can be done by an individual, it can be done by a corporation.

Back in the 1950's we let Japan kick our backside using transistors because major manufacturers didn't want to retool. Japan flooded the market with radios using our technology we invented and forced us to go to the new technology anyway.

California should stick to its guns and force manufacturers to provide ZEVs as originally dictated or higher.

It's time for us little guys to get a break in the high cost of transportation without having to wait all day for a bus or trolley.

Comment:

As a Santa Monica, California native living on the East Coast I know first-hand that California leads the country in the fight to reduce greenhouse emissions. As the head of CARB you have a tremendous opportunity to influence the state of our country and world.

The best and most practical way to reduce emissions in the short-term is by promoting high MPG plug-in hybrid vehicles like the Ford Escape concept car. Importantly, they utilize the energy infrastructure that is already in place and largely unused at night when consumers' cars would recharge.

I wrote to Peugeot expressing interest in their 308i clean diesel-electric hybrid concept car and was saddened to hear they don't believe there's a market in the U.S. for such a vehicle. I disagree and hope with your leadership and example the mindsets of both consumers and manufacturers alike will change.

Ms. Nichols, I respectfully request that you choose wisely this week to:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Thank you.

I support reducing greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs).

Please, DO NOT reduce the number of ZEVs required of automakers.

Please:

1. Require (at least) the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Choice for consumers means cleaner air for everyone.

The larger issues at hand are making EVs available to the working class masses and creating the green collar workforce and attendant infrastructure to reinvent our concept and mode of transportation.

Without your effective leadership in spurring the market, encouraging development and deployment of EVs and providing a necessary (and long overdue) pathway to sustainable transportation options, our societal standards of living will rapidly deteriorate.

Gone are the days of cheap fossil fuels and excessive consumption, we need to move quickly towards finding more energy secure and sustainable modes of transportation. EVs are a vital, no - integral part, of that solution.

Our planet's natural resources are not ours to exploit, we borrow these from our children. If not for us, for our children and their children's sake we must start to provide answers with tangible and effective means to reduce our environmental footprints.

Comment:

On March 27, the California Air Resources Board will revise the history-making program that put more than 5,000 Zero Emission Vehicles (ZEVs) on the road.

But your staff has issued a proposal that, instead of propelling our country ahead toward a pollution-free future, will profoundly weaken the program once again. This proposal would require automakers to produce only about 150 ZEVs each per year through 2015—which amounts to less than what these influential regulators mandated in 2003.

I strongly urge the board for a stronger proposal that puts more ZEVs on the roads, and helps move California toward the future.

Mark Hardy,
EV owner in San Diego

Subject: Please keep CARB's ZEV program alive and invigorated!
Comment:

ZEVs are viable means for transportation today, and it is up to CARB to set a precedent to auto-manufacturers that R&D and development and production of ZEVs are what the people want! The initial costs to manufacturers may be high, but people want ZEVs and over time the cost should come down resulting in a viable business for manufacturers. Without government incentives and regulations manufacturers may never make the responsible choice for the environment.

I request that CARB:

- 1) Continue to require automakers to commit to 25,000 ZEVs for 2012-2014
- 2) Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs
- 3) Incentivize plug-in hybrids that have the most on-board electricity storage

Subject: Regarding the upcoming public hearing about ZEV 2008 amendments
Comment:

Hello,

I am contacting the Air Resources Board today, to urge, to plead that you not vote to adopt these proposed amendments. These amendments would make it nearly impossible to see great improvements in emissions in vehicles which are responsible for a good bulk of the green house gas in our atmosphere today. To have effective Climate Change policy we need to start TODAY!

You need to send a clear message that California is done waiting around for the automakers to start mass producing vehicles which are affordable and more importantly GREEN. Don't let automaker/oil lobbyists convince you that they can't do it, they can and they have before. Just look back at your Boards own history to see the decisions that have guaranteed our addiction to oil continues. What happened to the EV-1? The Rav 4 EV? The Ford Ranger EV? All of them had good range and speed.

Just think about the technology we could have today if the Board had not been wooed by the automaker industry... Listen to the public you serve! Please.

I don't want to live in a world where my children someday might never know what a Polar Bear looks like in the wild, or what glaciers of immense magnitude look like and do for our world. The changes have to start somewhere! Be the heroes we need! Tell them that California is tired of Smog, tired of wars for oil that further our addiction, and tired of no one else doing anything real to deal with our changing climate!

Subject: Keep ZEV Strong and Give Back the NiMH EV battery
Comment:

Dear Mary Nichols and CARB,

I support Governor Schwarzenegger's agenda to reduce greenhouse gas emissions 25% by 2020.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like Governor Schwarzenegger's electric Tesla Roadster.

Please don't reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014. Please don't kill the electric car.

1. Please require at least the full 25,000 ZEVs that automakers had promised for 2012-2014.
2. Please create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.
3. Please incentivize EVs and PHEVs that have the most on-board electricity storage.
4. Please give us back the NiMH technology that Chevron/Texaco/GM/COBASYS is making it difficult if not impossible to use. I think the 'Human Element' could really use it now.

Choice for consumers means cleaner air for everyone.

I saw that movie "Who Killed the Electric Car" and couldn't believe it, so, I read the book "Internal Combustion" by Edwin Black, and "Plug-in Hybrids" by Sherry Boschert. (After looking at Edwin Black's chapter on hydrogen power, reading other reports, and talking to various sources, it still looks like a really clumsy, expensive, and inefficient way to store and distribute energy.) Then I went to Power Up! Summit (plugincenter.com) and to EVS23 in Anaheim. I showered the technicians and researchers and engineers and businessmen and EV and PHEV owners with lots of questions.

From what I could see, the EV and PHEV cars run beautifully with current technology. There's no need to wait for more research.

I had trouble finding much information on the tried and true NiMH

batteries. The RAV4EV goes much farther than most of our vehicles go on their daily commute, and their NiMH batteries are still going strong after 100,000 miles. Dr. Andy Frank's plug-in hybrids also go farther on electricity than most vehicles that commute daily, and that's with the old NiMH batteries.

I wish COBASYS wasn't being so difficult with its NiMH patent. I remember at EV23 I asked the Panasonic guys, "Why don't you make that NiMH battery again that works so great in the RAV4?" After the translator passed on my question, they all turned to me, pointed accusing fingers at the Toyota exhibit, and loudly exclaimed in english, "You ask them!!! You ask them!!" I guess that's Japanese for, "We'd love to make them, but the car companies are being foolish." I asked Dr. Andy Frank if NiMH batteries would work well with EVs and PHEVs. He shook his head sadly and said that they are a proven technology that works really well, but Chevron/Texaco/ COBASYS is making it all but impossible to use these batteries.

Bob Sexton mentioned that the newer generation lead-acid batteries don't get enough attention. He said the EVs with lead-acid batteries worked great once GM switched from Delco to Panasonic. According to him, a lot of EV and PHEV designs would work just fine with these better lead-acid batteries.

Car companies must have spent a fortune to successfully convince us to buy gas guzzlers despite our dangerous, toxic, expensive, and unpredictable oil economy. I think if we spent half as much money educating the public about EVs and PHEVs as we do pushing SUVs, they'd sell like hotcakes, especially since we can hook them to the grid, and triple the effectiveness of air and solar power. Also, I'm sure a lot of car buyers actually do care about the next generation.

Any sacrifice we'd have to make pales in comparison to the welfare of our children. What we're sacrificing now is a cleaner environment, freedom from a dangerous oil situation, and most important, the future of our children.

Thanks for listening and for all your hard work ----->

>>>>> Stephen Medina - hoping to have a car I can plug in at night, and go to sleep knowing I'm helping to make the world a better place.

P.S. - currently I do get to enjoy at least one ZEV >> my bicycle

Subject: Zero Emission Vehicle Regulation

Comment:

Please make the following changes to keep the ZEV program strong.

Require a minimum capability to drive in pure electric mode for 25 miles, not the proposed 10 miles, to accommodate the commuting range of a majority of drivers and make the vehicles more useful, profitable, and marketable.

Require automakers produce at least 10,000 electric or fuel cell vehicles total from 2012 to 2014.

Do not allow the electric and fuel cell vehicles sold in other states to count towards the credits for the California requirement (known as the "travel provision").

Thank you.

Comment:

The number of Zero Emission Vehicles (ZEVs) proposed by CARB staff will allow automakers to backslide on their 2003 agreement and require just 2,500 true ZEVs from 2012 to 2014. Startups alone plan to introduce this many ZEVs; surely the major automakers can do better and not manipulate the system with credits. I ask that: (1) you require the full 25,000 ZEVs between 2012 and 2014 that the automakers lobbied for and agreed to in 2003; (2) that you implement a level playing field between all types of ZEVs to get clean cars on the roads of California; and (3) provide incentives for plug-in hybrids by taking from the dirtiest cars, not the cleanest ones.

Comment:

I support the Governor's agenda to reduce greenhouse gas emissions 25% by 2020, (at the very least!). One of the most promising ways to reach this goal is to give as many consumers as possible the choice to buy Zero-Emission Vehicles (ZEVs).

Rumor has it that the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014. This is an unacceptable, as the amount is too insignificant to have any affect.

Mary Nichols, will you please seriously consider the following:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014, and
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

More ZEV's means cleaner air for everyone.

Subject: Keep the ZEP Program at Full Strength
Comment:

I completely support the Governor's call to reduce greenhouse gas emissions 25% by 2020; I'd prefer even a higher goal.

The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), so I am greatly dismayed to learn that your agency is considering reducing the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014.

I am writing to ask that you require at least the full 25,000 ZEVs that automakers had promised for 2012-2014.

I support stronger sanctions for high-emission vehicles, including having them impounded and scrapped.

In the interim, I urge you to create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Cleaner air for everyone is an essential goal. More and better choices will help us reach it.

Thank you for your attention.

Comment:

Dear Mary Nichols and CARB BOard,

Please reconsider your decision to weaken the ZEV program.

By authorizing all of the original 25,000 vehicles originally promised by the manufacturers for 2012-2104—even that, God knows, too little, too late—you'll at least give the program some teeth. Baby teeth, perhaps, but enough to give us at least a respectable presence of non-carbon-producing vehicles on California's highways.

I think it also makes sense to enact a separate requirement for plug-in hybrids such that they'd be replacing dirty vehicles rather than clean ZEVs!

Thanks for your consideration of these important issues.

David S. Cohen,

Subject: Electric Vehicles = a way to reduce global warming! It's a step forward.

Comment:

Electric vehicles are a way to reduce global warming. We can plug EVs into wind-powered or solar-powered sources, so EVs don't necessarily have to draw electricity from the coal-powered grid. As a state, we must move forward to tackle the difficult and challenging issue of global warming immediately! Otherwise, it will be too late for us to take action if we wait any longer.

I support the governor's agenda to reduce greenhouse gas emissions 25% by 2020. The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like your electric Tesla Roadster. Subject: ZEV2008 --- Electric vehicles as a way for California to reduce global-warming emissions!

Comment:

California is not a transit-friendly state. California is a state where people without vehicles do not get to go to places easily (unlike other states in the East Coast and unlike most European and Japanese cities). As a result of poor transportation-infrastructure planning from past decades, California is now a major emitter of greenhouse gases from vehicles. So I see EVs as a practical solution for us as a state to reduce global-warming emissions.

We can plug EVs into wind-powered or solar-powered sources, so EVs don't necessarily have to draw electricity from the coal-powered grid. As a state, we must move forward to tackle the difficult and challenging issue of global warming immediately! Otherwise, it will be too late for us to take action if we wait any longer.

I support the governor's agenda to reduce greenhouse gas emissions 25% by 2020. The most promising way to reach this goal is to give consumers the choice to buy Zero-Emission Vehicles (ZEVs), like your electric Tesla Roadster. Unfortunately, the California Air Resources Board (CARB) may reduce the number of ZEVs required of automakers by 90%, settling for only 2,500 from 2012-2014. I ask the CARB chair, Ms. Nichols, to do the following:

1. Require the full 25,000 ZEVs that automakers had promised for 2012-2014.
2. Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs.

Subject: Setting ZEV Standards we can be proud of
Comment:

Dear CARB Board Member,

The potential for real freedom for Californians, and possibly all Americans rests upon your decision to require that electric cars be produced by automakers for all of us, Now!

Your decision will help free us from dependence upon foreign oil as electric cars can charge at night when there is an existing surplus of electric power. Your affirmative decision to put electric cars within the reach of Californians will alleviate the skyrocketing cost for transportation, as electric cars cost about 25% as much to run as gas vehicles. Your decision helps our nation get out from the staggering debt we are under by reducing the trade deficit for oil imports. By deciding to challenge automakers to be innovative and have electric vehicles on the road you help keep children out of emergency rooms by cleaning the air and make the quality of life better for all of us. Your decision also takes a significant step towards reducing a primary cause of global warming; the positive effects of which we have yet to realize.

Be visionary today and set the bar. Be the coach that encourages automakers to produce 100% electric cars that should be able to surpass the performance of GM's old EV1, a wonderful vehicle even though it was based upon old technology. I find it sad to think that here was a car that moved Americans in the right direction but once the mandate by California for GM to provide ZEV cars was gone they confiscated and crushed them; clear evidence that we need your authority to improve the choices we have.

Toyota also did a great job with the RAV4 all electric vehicle. I have a friend who was lucky enough to buy and keep a RAV4 which she loves and uses as her primary vehicle. I wish I and others could have similar choices, but without a strong mandate Toyota also discontinued production.

The time is now, the technology is here and the decision is yours.

If you have any doubts, please take a spin in the new Tesla, as I hear it is a fabulous vehicle. Pricey, yes, but consider that they are just making a few at a time. Another reason why we need your mandate to spur mass production to bring prices within the reach of all of us.

Just imagine how having such a product on the world market could

be have a very benefical effect on the ailing auto industry.

Thank you in advance for considering the future of not only Californians but many other people.

Sincerly,
Peter Bunge

I WOULD ALSO LIKE YOU TO KNOW THAT MY WIFE AND I ARE PROUD OWNERS OF A 2000 TOYOTA RAV4 ELECTRIC CAR, AND HAVE NEVER HAD A MOMENT'S REGRET FROM OUR PURCHASE OF IT. IN FACT, OUR APPRECIATION OF IT HAS ONLY INCREASED THE MORE WE'VE USED IT, ESPECIALLY NOW THAT GAS PRICES ARE NEARING THE \$4.00 MARK. OUR RAV4 ELECTRIC IS ONE OF THE ELECTRIC CARS "THEY" TRIED TO KILL. MEANWHILE WE NEVER STOP GETTING ASKED ABOUT IT WHEREVER WE GO BY PEOPLE WHO CLAIM THEY WOULD LOVE TO OWN ONE. AS A VEHICLE FOR TRAVELING AROUND THE METRO AREA, IT IS EASILY THE BEST AND MOST PRACTICAL CAR ON THE ROAD. I URGE YOU, MS. NICHOLS, DO YOUR BEST FOR THE ECONOMY AND THE HEALTH OF THE PEOPLE OF THIS STATE AND OUR FRAGILE PLANET. FULLY SUPPORT THE MANUFACTURING OF ELECTRIC CARS. IT'S A TECHNOLOGY WHOSE TIME HAS ARRIVED AND THAT PEOPLE DESIRE.

THANK YOU VERY MUCH,

HOWARD GINDOFF

P.S. THE ATTACHED FILE IS A PICTURE OF OUR THEN 4 YEAR OLD DAUGHTER, JULIETTA YEANEY, IN HER TOYOTA RAV4 ELECTRIC CAR HALLOWEEN COSTUME WHICH WE PAINSTAKINGLY MADE FOR HER BECAUSE SHE LOVES THE CAR SO MUCH. INCIDENTALLY, SHE WON FIRST PRIZE.

Subject: ZEV Mandate

Comment:

Please, please, please do not lower the number of electric vehicles that automakers will be required to have on the road. Please do the following:

- * Require the full 25,000 ZEVs that automakers had promised for 2012-2014
- * Create a separate requirement for plug-in hybrids that lets them replace the dirtiest vehicles in CARB's regulations, rather than the cleanest ZEVs
- * Incentivize plug-in hybrids that have the most on-board electricity storage

Everyone I know would buy a ZEV if they were available and reasonably priced. Doing the above provides a pathway for them. Otherwise automakers will continue to ignore the public's needs (health, clean air, reasonably cool environment, etc.) and the market's wants. I would buy one now, if only one were available. I want an electric vehicle, period. I can't afford the \$60,000 E-box. But I can afford a \$30,000 EV1 or an electric RAV4.

There are already companies trying to bring cars like these to market even if the main automakers are not. There's Aptera, Telsa, Fisker, and even companies like Volvo have great cars in the works. But if the effort is not incentivized, it will take longer. Make the Fords and the Toyotas compete for my business by making Electric Vehicles mandatory. That will at least give the other companies a chance.
