Subject: Two comments from Covanta Energy on 95125(g)(2) & 95103 (c)(2)
Comment:

Doug Thompson and Pam Burmich:

I certainly appreciate your consideration of Covanta's and IEP's comments on your initial draft GHG regulations issued in August. I have two quick comments about the current October review draft:

1. In 95125 (g) (2) "Emissions shall not be based on O2 concentrations" is stated. I would like you to consider the attached special study Covanta conducted during our annual permit-required RATA at Burney Mountain Power biomass facility: Avogadro calculated the CO2 concentrations from the O2 CEMS concentrations using 40CFR60 Appendix A Method 19 and compared it to their CARB Independent Testing Contractor CO2 reference CEMS; the calculated CO2 passed the RATA requirements.

Would you please reconsider the language in 95125 (g) (2) to allow O2 CEMS if it can pass RATA as in the above special test?

2. In 95103 (c) (2) "Triennial Schedule" is stated that only "pure" biomass electric generating facilities may use this triennial schedule. Why was the word "pure" used here? Is an MSW electric generating facility > 10 MW subject to an annual schedule as in 95103 (c) (1)? And was this your intent?

Thank you for your attention to these details and please contact me if I can add any additional information or answer any further questions.

Jeffrey L. Hahn, PE, BCEE, QEP

Comment 2 for Greenhouse Gas Mandatory Reporting (ghg2007) - 45 Day.

First Name: Russ

Last Name: Bennett

Email Address: rbennett@ci.redding.ca.us

Affiliation: Redding Power

Subject: Request for Clarification, Section 95111 (c) (1)

Comment:

Our facility has one gas turbine/generator that is subject to 40 CFR 75, and several other turbine/generators and boilers that are not. The language in Section 95111 (c) (1) requires facilities that are subject to 40 CFR 75 to report their Part 75 CO2 emissions. It is not possible to report Part 75 CO2 emissions at the facility level. We can only report Part 75 CO2 emissions for the turbine generator that is subject to this regulation. The language in Section 95111 (c) (1) should be written so that it is clear the requirement to report Part 75 emissions apply at the unit level for those units subject to 40 CFR 75, and not the facility level.

Comment 3 for Greenhouse Gas Mandatory Reporting (ghg2007) - 45 Day.

First Name: Russ

Last Name: Bennett

Email Address: rbennett@ci.redding.ca.us

Affiliation: Redding Power

Subject: Request for Clarification, Section 95111 (a) (4)

Comment:

Our facility has a steam turbine that is supplied steam from two boilers and from a Heat Recovery Steam Generator that is on the exhaust of one of our gas turbine/generators. It does not make sense to apply Section 95112 to the boilers and turbine/generators because Section 95112 requires emissions to be distributed between thermal energy production and electrical production. The thermal energy production from the HRSG and boilers are used to generate electricity. Could Section 95111 (a) (4) and the related definitions for "cogeneration system" and "cogeneration facility" be clarified so that they do not apply to our facility.

Comment 4 for Greenhouse Gas Mandatory Reporting (ghg2007) - 45 Day.

First Name: David

Last Name: Armstrong

Email Address: armstrong3@llnl.gov

Affiliation: Lawrence Livermore National Laboratory

Subject: October 19, 2007 Draft Mandatory Reporting of GHG Emissions

Comment:

Request changing Section 95101 "Applicability" as follows:

1. Change subsection (b)(8) from "Operators of other facilities..." to "Operators of other industrial facilities..."
2. Change subsection (c) to add a new item: "(5) Sources that are solely used for comfort heating."

Rationale: The staff report for the subject rulemaking states on page 4 that, "under the proposed regulation, the facilities that are required to annually report their GHG emissions include...industrial sources that emit over 25,000 metric tonnes per year of CO₂." However in the draft subsection (b)(8), the word "industrial" was omitted. There are some non-industrial facilities that may exceed the reporting threshold based on emissions from comfort heating. Hospitals and schools have already been excluded for this reason, but there are other facilities that should be excluded for the same reason. Also in this regard, please note on page 14 of the staff report, Section 5, "Defining a "Facility" and an "Operator", which states "...unspecified sources such as residential heating and cooling would not be included."

Comment 5 for Greenhouse Gas Mandatory Reporting (ghg2007) - 45 Day.

First Name: Bob

Last Name: Ellery

Email Address: bellery@spi-ind.com

Affiliation: Sierra Pacific Industries

Subject: mandatory Reporting for Biomass Cogeneration Facilities

Comment:

Sierra Pacific Industries owns and operates 5 cogeneration facilities that combust solid biomass. Several co-fire with fossil fuels for start-up, shutdown or malfunction operating periods only. We would like to confirm that our facilities would report under proposed Section 95111 because we combust biomass rather than Section 95112 because we are a cogeneration facility. Section 95112 seems to be focused on the combustion of fossil fuel.

Subject: Carbon Tax

Comment:

Will California consider implementing a carbon tax? If not, why not? This has all the benefits of reporting greenhouse emissions (the amount of greenhouse gases is directly reflected in the price), provides financial incentives for both innovation and good consumer choices, and avoids the bureaucracy that would be required for reporting emissions.

Subject: Clarification regarding HSCS 42871

Comment:

In Health and Safety Code Section 42871 (b) states the following:

(b) It is the intent of the Legislature that emissions registered and verified in accordance with this chapter prior to January 1, 2008, receive appropriate consideration under any future international, federal, or state regulatory scheme relating to greenhouse gas emissions.

Has ARB staff given any consideration to defining "appropriate consideration" and how this will affect CCAR members who have voluntarily put forth a good faith effort to have their emissions verified but are unable to meet the 12/31/2007 deadline?

Staff should consider defining a timeline for those members who are able to have emissions verified within a 30 or 60 days, of the 12/31/2007 deadline, to be included in the "appropriate consideration".

Comment 39 for Greenhouse Gas Mandatory Reporting (ghg2007) - 45 Day.

First Name: Joseph

Last Name: Heinzmann

Email Address: jheinzmann@fce.com

Affiliation: FuelCell Energy

Subject: Reporting for Onsite Biomass and Natural Gas Fired Combined Heat and Power Applications

Comment:

FuelCell Energy (FCE) appreciates the opportunity to offer input to the California Air Resources Board (CARB) on the Draft Regulation on Mandatory GHG Reporting that was released by the ARB staff on October 19, 2007, and discussed during the public workshop on October 31, 2007.

FuelCell Energy has been actively deploying highly efficient and ultra clean fuel cells to private and public facilities within the State of California, North America, Europe and Asia. There are currently nearly 20 MWs of FuelCell Energy's high temperature molten carbonate based fuel cells operating or under contract in California. Typically these facilities are less than 2 MWs in size but interest and the favorable economics of larger deployment of this beneficial technology is growing.

By deploying FuelCell Energy Combined Heat and Power (FCE-CHP) systems at load centers throughout the state we can raise the total system efficiency first by the inherent higher electrical conversion efficiencies of a high temperature fuel cell, secondly by removing the line losses required to transmit the electricity to the facility and finally compound the CO2 savings by using the waste heat to offload the boilers that are operating at facilities. These onsite FCE-CHP systems actually reduce local emissions since the fuel cells themselves are Ultra Clean and the boilers are burning less fuel.

FuelCell Energy has been proud to work with municipal waste water facilities throughout the state deploying fuel cells at waste water facilities. These installations are producing up to 40% more ultra clean renewable kWhrs from the same amount of digester gas compared to standard combustion technologies.

Additionally, FuelCell Energy has been honored to be actively engaged with the food and beverage industry in our state in an effort to reduce operating costs, maintain industry competitiveness, and create a sustainable business environment by introducing a waste to energy model where in the facility's typical waste is used in an onsite digester to reduce disposal costs and the associated emissions. The digester gas is fed back to the fuel cell which then produces ultra clean and efficient renewable energy in the form of electricity and heat for the facility's process. This closed loop ultra clean and highly efficient system is the sustainable model that must be supported and credited wherever possible.

Based on the above FuelCell Energy requests the following changes be made to the reporting guidelines

- Generating facilities reporting size should be raised from 1 MW or greater to 12 MWs or greater recognizing the greater good distributed generation brings to our states electrical needs
- Biogas utilization should be credited with a CO2 sink factor recognizing the inherent renewable and sustainability aspect of investing in the development and utilization of this fuel
- Facilities who have invested in onsite generation should have a CO2 credit due to the reduction of line losses and the associated CO2 emissions

Respectfully,
Joe Heinzmann
FuelCell Energy

Comment 44 for Greenhouse Gas Mandatory Reporting (ghg2007) - 45 Day.

First Name: Jim

Last Name: Sandoval

Email Address: jim.sandoval@ch2m.com

Affiliation: Bay Area Clean Water Agencies--AIR Comm.

Subject: Mandatory Reporting comments--reporting dates & biomass

Comment:

The Air Issues and Regulations (AIR) Committee of the Bay Area Clean Water Agencies (BACWA) is a coalition of San Francisco Bay Area Publicly Owned Treatment Works (POTWs) working cooperatively to address air quality issues. The AIR Committee has 18 member agencies, including large metropolitan facilities such as East Bay Municipal Utility District, the City and County of San Francisco, Central Contra Costa Sanitary District, and the City of San Jose. Together, AIR Committee member agencies treat over ninety percent of the municipal wastewater in the Bay Area.

We understand that the goals of the proposed Mandatory Reporting Staff Report are to 1) begin reporting the most significant GHG emissions, 2) use rigorous and consistent emission accounting methods, 3) provide verification of reported emissions data, and 4) use the standards and protocols of the California Climate Action Registry (CCAR) to the extent feasible and appropriate. The proposed Mandatory Reporting may potentially have a large impact on our member organizations. Therefore, we have reviewed the proposed Staff Report, and have summarized our concerns, as follows:

1) In general, we are concerned that the proposed report may not set clear dates for reporting deadlines. As currently written in the proposed report the reporting dates for ARB (April 1, June 1) do not match with CCAR (August 31). This discrepancy makes reporting to two separate state agencies more cumbersome. For further continuity and ease in the reporting process, the reporting dates for CARB and CCAR should align.

2) Mandatory Reporting may not give enough precedence to the biological ("biomass"/"biogenic") portion of air emissions. As most of our member agencies are producers of biomass or biologically formed materials, we would like to comment on the reporting of biomass-derived emissions. Of particular importance is the differentiation of GHG emissions (whether biomass or fossil fuel). We ask that a clearer distinction be made in the reporting between biomass and fossil-fuel derived emissions to minimize any possibility of accounting confusion when mandated emissions reduction and cap and trade programs take effect.

We appreciate the opportunity to comment on these draft regulations and look forward to working with you as this regulation takes shape. Please contact Jim Sandoval at (831) 425-7142 or Meghan Hartman at (510) 587-7547 of CH2M HILL with any questions related to these comments. Thank you for your consideration.

Re: Appendix A to the Regulation for the Mandatory Reporting of Greenhouse Gas Emissions - Comments by David L. Hagen, May 17, 2008
61485 CR 13, Goshen IN 46526

1 Exclude Biomass Use

The prescriptions for reporting biomass fuels in this document appear onerous and heavy handed. They act in direct opposition to the intent of the legislation to promote sustainable energy use. Recommend deleting ALL reporting of biomass, or at least excluding

ALL biomass use less than 25,000 metric tons/year. E.g., on page A-32 (2), exclude biomass.

On p A-27 (9), is $\pm 5\%$ appropriate for biomass and landfill gas? Varying moisture content and variations in land fill gas can give heating value variations far higher than this. Both are nominally renewable resources and nominally do not contribute to increasing atmospheric CO₂ on a steady state basis. E.g., on pages A-103 (2) and (3). It would appear important to evaluate the fossil fuel based carbon dioxide and exclude the biomass based carbon dioxide.

2 Uncertainty goals rather than prescription

The document focuses on prescription rather than on the end goal of the desired "accuracy" or uncertainty. Recommend specifying a desired long term uncertainty goal as a function of size and fossil vs biomass. Then let operators select frequency based on the stability of their instrumentation and feedstock. E.g., A101. Annual measurements may be overkill for highly stable operations and equipment. Conversely highly variable operations and poor quality equipment may require more frequent adjustments and calibration.

3 Staged verification:

The mandated prescription requiring all operators to obtain verification during the same period with gaps of two years in between will result in an onerous boom/bust work and profit cycle for verification operators. Recommend the example set in the Senate of 1/3 of locations being tested in each year of a three year cycle. Allow operators to select which year to verify on a first come first serve basis.

4 Fuel & biomass testing

The rigid testing procedure to evaluate fuel value appears heavy handed and without reference to the overall uncertainty desired. Recommend specifying a desired uncertainty, and allow operators

to
select the frequency of testing according to their fuel
variability
and their relative size. E.g., allow small operators to use
standard fuel values or only test occasionally. Allow operators
to
accumulate samples that are then tested on a less frequent basis.
E.g. every quarterly, semi annually or annually for smaller
operators.

5 Size: 25,000 vs 2,500 metric tons
Per ARB resolution 07-54, "3. Annual reporting of GHG emissions .
. .sources that emit over 25,000 metric tonnes (sic) per year of
CO2 from stationary source combustion is necessary to include the
most significant California GHG emissions sources." There are
numerous references to 2,500 metric tons. Recommend correcting
all
these to 25,000 metric tons unless otherwise authorized by the
ARB
or by clear uncertainty guidelines in emissions reporting.

Detailed recommendations & corrections:

6 Appendix A-3 unit Re: "Tonnes (metric)". In the United States
the correct term is metric ton. See: "Metric System of
Measurement: Interpretation of the International System of Units
for the United States", Federal Register notice of July 28, 1998,
63 F.R. 40333. See: NIST SP-811, Guide for Use of SI Units, Barry
N. Taylor, 1995.

7 Appendix A-3 Unit Conversions. Re Btu conversion factors. There
are at least five Btu definitions. Specify the temperature or
type
of Btu being specified.

8 Appendix A-3 Unit Conversions. Correct "Kilograms" to
"kilogram", "Kilometer" to "kilometer", "Kgf" to "kgf", etc. Add
"(Mg)" after "Megagrams".

9 Appendix A-5 Section 4. Specify the time frame for the quantity
threshold. E.g "25,000 metric ton/year threshold" and "2,500
metric ton/year threshold".

10 Table 3. Correct "Kg" to "kg".

11 Appendix A-8. Re: significant units in fuel type. All fuels
show two significant figures while Municipal Solid Waste is
listed

to five significant figures and is yet one of the most variable.
Change to 91 kg CO2/MMBtu.

12 Appendix A-4 95102 Definitions (a) (1) "Accuracy".
Accuracy is an informal term. If you wish quantitative results,
this should be changed to "Uncertainty". See NIST publications
relating to Uncertainty.

"Uncertainty of Measurement Results from NIST"

"Guidelines for Evaluating and Expressing the Uncertainty of NIST
Measurement Results"

See Book: Measurement Uncertainty, 3rd Edition

Measurement Uncertainty: Methods and Applications, Fourth Edition
Ronald H. Dieck, (2006) ISA, ISBN: 1556179154

13 A-5 (11) Add conversion to liters.

14 A-5 (17) Add note that there are four other definitions of
Btu.

15 A-5 (83) Include "bitumen, shale oil."

16 A-14 (105) Correct "pressure" to "potential difference". Add
"One Watt is the power equal to one joule of energy per second."

17 A-15 (115) Correct "Metric tonne" to standard US usage of
"metric ton". Correct throughout the document and appendix.

See: "Metric System of Measurement: Interpretation of the International System of Units for the United States", Federal Register notice of July 28, 1998, 63 F.R. 40333
NIST SP-811, Guide for Use of SI Units, Barry N. Taylor, 1995.
18 A-22 (181) 760 mm is incorrect with 60 deg. F. Correct STP definition to read:
"Standard conditions" or "Standard Temperature and Pressure", unless otherwise designated, refer to the USA customary value per
the American Gas Association (herein "STP(68)") of: "a temperature of 15.6 degrees Celsius (68 degrees Fahrenheit) at a pressure of one atmosphere (101.325 kPa)." Some citations refer to the Compressed Gas Institute value (herein "STP(60)") of: "a temperature of 20 degrees Celsius (60 degrees Fahrenheit) at a pressure of 762 mm (30") mercury." (E.g., designate on page A-97 etc.)
19 A-26 (6). Specify the time frame. E.g., "20,000 metric tons/year".
20 A-27 (9). "Accuracy" (as noted above) is not used for quantitative measures. Correct to "uncertainty". See "uncertainty guidelines" at NIST.gov.
21
A-62 95112. Include "cooling" or Combined Cooling, Heat, and Power."

Comment 3 for Greenhouse Gas Mandatory Reporting (ghg2007) - 15-1.

First Name: Thierry Sam

Last Name: Tamers

Email Address: ttamers@betalabservices.com

Affiliation: Beta Analytic Inc

Subject: First sentence in section 95125(h)(2) is not clear.

Comment:

Dear Sir / Madam:

We would like to bring to your attention the following sentence in Section 95125(h)(2) that might lead to some confusion in its interpretation:

"The operator that combusts fuels or fuel mixtures that are at least 5 percent biomass by weight and not pure biomass, except waste-derived fuels that are less than 30 percent biomass by weight of total fuels combusted for the report year, shall determine the biomass-derived portion of CO2 emissions using ASTM D6866-06a as specified in this article."

It is presumed that plants that elect to label their fuels as less than 5 percent biomass by weight or waste-fuels as less 30 percent biomass by weight will do so with the knowledge that the entire fuel mix will be classified as a fossil fuel. In our opinion, the first sentence in section 95125(h)(2) is not clear with regard to this point.

There are two possibilities to remedy the ambiguity of the first sentence in section 95125(h)(2). The first possibility is to recommend that the ASTM D6866-06a method be used for all heterogeneous fuel mixtures. As such the sentence could read as follows:

"The operator that combusts fuels or fuel mixtures that contain a mixture of biomass and fossilized materials shall determine the biomass-derived portion of CO2 emissions using ASTM D6866-06a as specified in this article, unless the operator wishes to report all their CO2 emissions as fossil-fuel."

Alternatively, you could elaborate on the first sentence of section 95125(h)(2) with this sentence added to the first sentence:

"..... Operators that combust fuels or fuel mixtures that are less than 5 percent biomass by weight and not pure biomass, or waste-derived fuels that are less than 30 percent biomass by weight of total fuels combusted for the report year, can elect to report all their fuel mix as 100% fossil fuel if they do not determine and report the biomass-derived portion of CO2 emissions of their fuel using ASTM D6866-06a."

Please call or email us if you have any questions regarding this comment.

Sincerely,

Thierry Sam Tamers

Subject: Source test requirements when not using NO2 defaults

Comment:

The requirement that states if you choose to use your own N20 from your source test, instead of the default, then you must source test annually, is very unfair for the following reasons

1. Local air districts like the SJVAPCD already have N20 limits that have to be proven by source testing already. The default for N20 in this case should be what you have to make in that district. In this district the Nox ppm limit is already set at 9ppm. So the default for N20 should be set at what the highest limit is in that district.

2. Saying that if you choose your District's limit, that you must then subject your self to annual source testing is going to cost more, the reason being that in this district if you make the limits two years in a row then you can go 36 months before having to test again.

3. What is the purpose of the local air district if you are basically saying we will not accept what your district has mandated, and we don't trust your source test data that you paid for.

4. Source testing boilers is not cheap, and to require more, when you already have documented results that were approved by the district is beyond me

5. Also using a default for N20 or Nox is basically telling industry that all that money you spent on Nox control to get to 9ppm, is null and void unless you submit to the States annual source testing program.

6. Bottom line is don't the State have any confidence in the local air districts? and if not then do away with them and just have one agency to report to.

I have attached the section of this bill I'm talking about below. So all interested parties can read into it, maybe I'm misinterpreting this but using the default N20 has got to give you a higher total, than what you'd get using 9ppm district imposed limit that is already in place.

Copied from the latest version of the GHG reporting req

The operator may elect to calculate CH4 and N20 emissions using ARB approved source specific emission factors derived from source

tests
conducted at least annually under the supervision of ARB or the
local air
pollution control district or air quality management district.
Upon approval of
a source test plan by ARB, the source test procedures in that plan
shall be
repeated in future years to update the source specific emission
factors
A-84
annually. In the absence of source specific emission factors
approved by
ARB, the operator shall use the default emission factors provided
in
Appendix A.

Subject: AB32 -- GHG Emissions Compilation and Reporting

Comment:

Praxair Comment #1 : [Section 95103 -- Reporting Requirements]
REQUESTED CHANGE -- Add a sentence to 95103(a), just above 95103(a)(1), stating : Hydrogen Plants using 95114(b)(2) to calculate CO2 emissions shall substitute "fuel and feedstock" wherever the word "fuel" is stated in 95103(a)(8) through (10).
REASON FOR CHANGE -- Hydrogen Plant CO2 emissions can be determined by measuring all incoming carbon per 95114(b)(2). Therefore, sections 95103 (a)(8) through (10) concerning missing data, measurement accuracy, and interim data collection need to use "fuel and feedstock" as the parameter applicable to Hydrogen Plants, not just "fuel".

Praxair Comment #2 : [Section 95114 -- Hydrogen Plants]
REQUESTED CHANGE -- Add a sentence to 95114(a)(3) and also to 95114(a)(4) stating that the carbon contained in the Methane (CH4) calculation results for these sections shall be subtracted from the CO2 calculation result of 95114(b)(2).
REASON FOR CHANGE -- As currently written, the carbon in the entering feedstock and fuel would be double-counted for the portion represented by the Methane calculations. [This change does not greatly affect the facility's CO2 emissions computation, but needs to be made for overall correctness.]

Praxair Comment #3 : [Appendix]
REQUESTED CHANGE -- Revise Table 6 on Page A-9 of the Appendix to add entries for METHANE, HYDROGEN, and CARBON MONOXIDE.
REASON FOR CHANGE -- Hydrogen Plant reformers combust Natural Gas, Methane, Hydrogen, and Carbon Monoxide. Table 6 entries for these fuels need to be included so that the Hydrogen Plant's CH4 and N2O combustion emissions can be calculated.
COMMENTS -- Although the methane and nitrous oxide emission factors for combusting Methane are likely the same as for Natural Gas, 0.9 and 0.1, the table needs to state this. The methane emission factors for combusting Hydrogen and Carbon Monoxide also need to be listed. For those two fuels, the methane emission factor should be stated as ZERO because they contain no hydrocarbons, and an appropriate nitrous oxide factor is probably 0.1, similar to natural gas. [NOTE -- Hydrogen and Carbon Monoxide burn hotter than Natural Gas, and nitrous oxide emissions decrease as temperature increases, so their N2O factors in the table should be 0.1 or less.]

Subject: AB32 Mandatory GHG Inventory Rule, comments by Valero Energy

Comment:

Valero appreciates the additional year ARB has provided for monitoring and compliance purposes while the GHG inventory rule development process continues. We support ARB's ongoing efforts to finalize this rule as expediently as possible in a manner satisfactorily to all stakeholders. However, the additional time that has been necessary to reach this consensus has stretched rule development well into 2008, leaving significantly less time for assessing and implementing compliance strategies

We believe it is important for ARB to address the belated publication of this rule and how that has created a need for additional time for the design, purchasing, and installation of some of the required monitoring equipment. It is noted that the rule allows for the manual collection of data to fill the interim, and while we understand ARB's reluctance to further delay any of the compliance deadlines, we recommend that the regulation include a provision to allow alternative calculation protocols to be used in the interim for those reporters who need more time to implement projects. It should be noted that most refineries are reporting annually verified inventories to CCAR according to the CCAR reporting and verification protocols. While these are not identical to the ARB regulations, the resultant inventories are systematically developed using generally accepted, credible, defensible, and verifiable techniques. All or portions of the CCAR inventories should be acceptable as temporary substitutes as needed.

Thank you for the opportunity to comment on this effort. If there are any questions or concerns, please contact me at number above.
