6. How do I submit a Running Change to the DMS for an Off-Road engine/evaporative family?

a) Refer to the document naming convention found in Appendix A, Table A-4, File Naming Convention for Off-Road Documents of the DMS User's Guide and name the document properly.

b) Upload the document into the corresponding application folder (Exhaust or Evaporative), and, where necessary, into the appropriate exhaust/evaporative family sub-folder (depending on how you have arranged the Application Folder).

c) Submit the document into the Application Workflow Process.

Your ARB assigned Certification Engineer will notify you if any further action on your part is necessary.
