Subject: In-Use Off-Road Diesel Vehicle Regulation Fleet Average Calculator for Large Fleets – Updated and Expanded

The Fleet Average Calculator for Large Fleets and its accompanying user guide have been updated. The calculator has been updated with new features and expanded to include all compliance years out to 2023. The calculator is intended to help large fleets (any fleet with over 5,000 total horsepower is considered large) evaluate compliance options for each compliance year. Note that this calculator is not for use by medium or small fleets. You are receiving this message because you are listed as the contact for a large fleet currently reported in the DOORS reporting system.

The Fleet Average Calculator is an Excel spreadsheet designed to assist fleet owners in calculating their Fleet Average Index and Fleet Average Targets, based on the engine model year and horsepower of the vehicles in their fleet. The calculator allows fleets to experiment with different turnover, repower, and retrofit strategies to plan for compliance with the in-use off-road diesel vehicle regulation.

The Fleet Average Calculator and its User Guide are available on our website at <http://www.arb.ca.gov/msprog/ordiesel/documents/documents.htm#fleet>.

The calculator may receive additional updates and improvements in the future. If you have any questions, comments, or other suggestions pertaining to the calculator, please contact the DOORS Hotline by phone at (877) 59-DOORS (877-593-6677) or by email at doors@arb.ca.gov.
