I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Lisa Rizzo

Dear Chair Nichols and Members of the Board:

My name is Jeannie-Kay RN, and I live in King City. As a School Nurse I am very aware of the numbers of respiratory compromised young people in all our communities and those who live close to the freight industry complexes will suffer more asthma related morbidities. Adopting mitigating measures will decrease the pollutions that harm our vulnerable youth. All people have the right to cleaner air to breathe.

As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

-- Sent from **Steffen Rochel** to **California Air Resources Board** on Jun 12, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Steffen Rochel, and I live in Burlingame. Reduce Air pollution and environmental impact.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

--

Dear Chair Nichols and Members of the Board:

My name is Scott Romanowski, and I live in Simi Valley. It is important in the ongoing push to remove fossil fuels and their pollution from our lives.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Scott Romanowski
3349 Crystal Cir

Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Melody Ross

-- Sent from **Elaine Russell** to **California Air Resources Board** on Jun 12, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Elaine Russell, and I live in Long Beach.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Elaine Russell

-- Sent from **Isaac Salazar** to **California Air Resources Board** on Jun 12, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Isaac Salazar, and I live in Los Angeles.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Isaac Salazar

-- Sent from **Marie Salerno** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Marie Salerno, and I live in Novato. Shipping is very polluting as are cruise ships. Many things, both inside and outside a ship, are carried from places of origin to various docks and many of them are destroying the water quality and wildlife. I buy as much as I can from close to home because of the pollution of on line ordering and shipping/trucking.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. -- Sent from **Arlene saretsky** to **California Air Resources Board** on Jun 23, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Arlene saretsky, and I live in Santa Clarita.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Arlene saretsky

Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Susan Schermerhorn

-- Sent from **Donna Schubert** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Donna Schubert, and I live in [@advCity]. I lived by the beach in Long Beach for 2 years and everyday would sweep up a black pile of dust...didn't look like dirt. As I developed a cough I realized it was the soot from the smokestacks of the ships just off shore. It was a very unhealthy place to live, and I was there a short time. I can't imagine the damage that environment does to the lungs of every child and senior forced to live there a lifetime. They can't move away as I did. I may never be the same. They don't stand a chance. Please help them live healthier lives and save us all their future medical experiences, not to mention their family loss and pain of consequences caused by shipping pollution. You'll help all the people who work on those ships too, even though their employers won't like paying for it.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Donna Schubert

Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Elliott Sernel

Dear Chair Nichols and Members of the Board:

My name is Kerri Sevenbergen, and I live in Spring Valley. Climate change is a crisis and imminent threat! We must move to cleaner vehicles. Cleaner air is also obviously better for human health.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

-- Sent from **Valerie Shideler** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Valerie Shideler, and I live in Olivehurst.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

-- Sent from **Florence Silverstein** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Florence Silverstein, and I live in Los Angeles.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Florence Silverstein

As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

-- Sent from **Dorrie Slutsker** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Dorrie Slutsker, and I live in Oakland.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

-- Sent from **Laura Sneddon** to **California Air Resources Board** on Jun 13, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Laura Sneddon, and I live in Los Gatos.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Laura Sneddon

My name is Amy Spencer, and I live in Grass Valley. I used to live near the Long Beach harbor.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Amy Spencer

-- Sent from **Katryn Steelman** to **California Air Resources Board** on Jun 11, 2020

--

Dear Chair Nichols and Members of the Board:

My name is Katryn Steelman, and I live in Montara.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Katryn Steelman

My name is Terrance Stodolka, and I live in Banning.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Terrance Stodolka

-- Sent from **Kirstie Stramler** to **California Air Resources Board** on Jun 23, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Kirstie Stramler, and I live in Cotati. Poorly tuned Diesel engines emit harmful particulates in size ranges that can induce COPD and asthma, and in areas like the Port of Oakland in Alameda County the prevailing winds trap these particulates so they accumulate against the Oakland Hills, resulting in poor air quality for millions of East Bay residents and employees. Seriously this is not advanced technology it is basic maintenance and will cut your fuel bills when combustion is more complete. That's the only way to defeat this legislation so do it and submit to air quality tests or you can convert your entire fleets to electric which is nuts.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. Dear Chair Nichols and Members of the Board:

My name is Joanne Sulkoske, and I live in Thousand Oaks.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Joanne Sulkoske

Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Janet Tache

Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Jean Tepperman

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Frugoli Tina

My name is Betty Traynor, and I live in San Francisco. We must all be able to breathe clean air and need to stop this diesel pollution--there are alternatives and we must begin to use them NOW.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Betty Traynor

Every step on this journey is critical as is taking them in a timely manner.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Maurice Turrieta

Martinez, CA 94553

-- Sent from **Leon Van Steen** to **California Air Resources Board** on Jun 12, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Leon Van Steen, and I live in San Francisco.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Leon Van Steen

-- Sent from **Amanda vicker** to **California Air Resources Board** on Jun 23, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Amanda vicker, and I live in Torrance. Health and environmental reasons

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Amanda vicker

Dear Chair Nichols and Members of the Board:

My name is Margaret Wallace, and I live in Prunedale.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Margaret Wallace

In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,

Dear Chair Nichols and Members of the Board:

My name is Michelle Waters, and I live in Los Gatos.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

-- Sent from **Cheryl Weiden** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Cheryl Weiden, and I live in Los Altos.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Cheryl Weiden

My name is SARAH WHISTLER, and I live in Los Angeles.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
SARAH WHISTLER

-- Sent from **Edwina White** to **California Air Resources Board** on Jun 14, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Edwina White, and I live in Sacramento.

We need a strengthening of regulations to clean up the harmful air pollution caused by the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are among the most critical, because they provide greater protections for the disproportionately affected Californians living near our major freight ports and warehouses.

Industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our right to health by adopting these regulations -- even in the face of these powerful interests. With your leadership, we can make California's skies cleaner, defeat harmful climate pollution, and save public monies.

My name is Cynthia Williams, and I live in Rancho Palos Verdes. It is a large group and needs cleaning up.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Cynthia Williams

Dear Chair Nichols and Members of the Board:

My name is Deborah Williams, and I live in Goleta. As a resident of Goleta with COPD, I care deeply about the quality of our air for myself and others. Currently, you can see the air pollution from the ships that traverse the waters between the coast and the Channel Islands, and the 101 is just a few blocks from our house. We have put our money where our mouth is and we generate all of the electricity we use for our home and car from solar panels we have installed.

For the sake of people of all ages with lung disease, as well as workers, and others who have a lot of exposure to air pollution from shipping and freight, please adopt these regulations.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. -- Sent from **Mark Winkler** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Mark Winkler, and I live in Ukiah. Cleanliness matters in all things.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Mark Winkler

-- Sent from **Jud Woodard** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Jud Woodard, and I live in Sutter Creek.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Jud Woodard

Dear Chair Nichols and Members of the Board:

My name is Julian Yerena, and I live in Parlier. We all deserve clean air

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Julian Yerena

-- Sent from **Stephen Zelman** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Stephen Zelman, and I live in Los Angeles. Protecting the environment means protecting public health, and that should be a top priority. Now is the time for change!

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Stephen Zelman

Re: Agenda Item No. 20-6-4 – Control Measure for Ocean – Going Vessels At Berth

Dear Chair Nichols and Members of the Board:

On behalf of Earthjustice, I submit the following letters from Earthjustice supporters encouraging the California Air Resources Board to move forward on several life-saving regulations to combat deadly diesel pollution (appended as "Attachment A"). As you can see, more than 3,400 Californians submitted letters advocating for adoption of a strong regulation to control ship pollution while at berth as quickly as possible. It is our understanding that the shipping and oil industries have been vigorously fighting these regulations, and we ask that this Board have the courage to stand up to these powerful interests and advocate for the health of Californians.

We appreciate your consideration of these letters, and we look forward to working with the Air Resources Board to clean up harmful pollution from the freight industry.

Sincerely,

Adriano L. Martinez
Staff Attorney with Right to Zero Campaign

Re: June 25, 2020 Board Meeting

20-6-4: Public Meeting to Hear an Informational Update on Control Measure for Ocean-Going Vessels At Berth

15-B-13.1

As members of this community, we are supportive of achieving emission reductions in port communities. The mechanism by which we do that is important and must be done in a way that is safe and achieves meaningful, lasting reductions. Unfortunately, the 15-day language has advanced the timelines and put forward “innovative concepts” that cannot be meaningfully used to comply with this regulation. This leaves regulated entities in a situation where the only way they can comply with the regulation will be with vessel-based technologies which, at this point, have not been tested for the tanker sector and could result in substantial safety issues.

For the safety of our communities, we can't support a rule that fails to establish safe and effective compliance mechanisms.

We strongly encourage the board to ensure that this rule can be complied with in a manner that is safe and effective and results in the community reductions we all seek.

With regards,

Katrinka Ruk

AC Transit Core Values

SECTION A:

Overview of AC Transit

The Alameda-Contra Costa Transit District (AC Transit) is the third-largest public bus-only transit property in California, serving 13 cities and adjacent unincorporated areas in Alameda and Contra Costa counties. Based in the San Francisco East Bay, AC Transit's General Office is located at 1600 Franklin Street, Oakland, Alameda County, 94612. Operating in the Bay Area Air Quality Management District (BAAQMD) in the Alameda County, San Francisco Bay Area Air Basin, AC Transit has been serving the East Bay since 1960, taking over from the Key System and its predecessors that carried passengers via buses, horse-drawn rail streetcars, electric streetcars, and ferries over the previous 100 years.

AC Transit has a long-standing commitment to preserving and improving the quality and quantity of transit service for 1.5 million East Bay passengers that populate our 364 square mile service area, which includes the counties of Alameda and Contra Costa covering 13 cities and adjacent unincorporated areas of the East Bay. AC Transit carries about 200,000 riders on an average weekday, along 149 service lines while generating over 20 million annual miles on its fleet of 635 public transit buses.

Since 2000, AC Transit has been building the most comprehensive zero-emission bus (ZEB) program in the United States, initially focused on hydrogen fuel cell technology and most recently expanded to include battery electric buses. From 2003 to 2018, AC Transit led a coalition of transit agency and industry stakeholders supported by Federal, State and Local partners; AC Transit deployed three generations of ZEBs. Each phase teaching us how to improve procurement, operation and performance of ZEB technology. During the demonstration period AC Transit logged over 3.2 million zero emission miles, while exceeding many performance targets established by the Federal Transit Administration (FTA) and the Department of Energy (DOE) and creating new performance records for ZEB technology. Through trial and error and many growing pains AC Transit has improved the ZEB deployment process with enhanced project delivery methods and ongoing sustainable maintenance practices. AC Transit is now moving into the advanced stages of ZEB deployment.

AC Transit is an industry leader at providing public transit solutions that connects the East Bay communities with regional destinations. The District adopted a Strategic Plan to concentrate staff time and resources on activities that are of primary focus. Elements of the Strategic Plan consist of: Core Values, Vision and Mission Statements, Goals and Initiatives to organize the District's work effort direction.

Safety

Service

Environmental
Sustainability

Equity

Innovation

Integrity

Trust

Mission Statement

We deliver safe, reliable, sustainable transit service that responds to the needs of our customers and communities.

Vision Statement

AC Transit is valued as a leader that helps the Bay Area thrive by connecting East Bay communities to each other and to regional destinations.

Strategic Goals and Initiatives

GOALS:

- Safe and Secure Operations
- Convenient and Reliable Service
- Financial Stability and Resiliency
- High-Performing Workforce
- Strong Public and Policymaker Support
- Environmental Improvement

INITIATIVES:

- Service Quality
- Infrastructure Modernization
- Employee Recruitment, Training and Retention
- Zero Emission Programs
- Financial Efficiency and Revenue Maximization

SECTION B:

Rollout Plan General Information

Innovative Clean Transit Regulation

The Innovative Clean Transit (ICT) regulation was adopted by the California Air Resources Board (CARB) in December of 2018 and became effective October 1, 2019. Title 13 California Code of Regulations §2023 (13 CCR § 2023.1 through 2023.11) requires all public transit agencies to gradually transition their bus fleets to zero-emission technologies. The ICT regulation applies to all transit agencies that own, operate, or lease buses with a gross vehicle weight rating (GVWR) greater than 14,000 pounds. It covers standard, articulated, over-the-road, double decker, and cutaway buses. The ICT regulation requires a percentage of new bus purchases to be zero-emission buses (ZEBs). The ZEB percentage increases gradually with time. The ZEB purchase requirements begin in 2023 for large transit agencies (200 buses or more) and 2026 for small transit agencies. Starting 2029, 100 percent of all transit agencies' new bus purchases must be ZEBs, with a goal of complete transition to ZEBs by 2040.

Each transit agency must adopt and submit to the California Air Resources Board (CARB) a Zero Emission Bus Rollout Plan describing how the agency will transition to a zero-emission fleet. A large transit agency must submit this plan to CARB by July 1, 2020. Accordingly, AC Transit's Board of Directors adopted a Resolution which outlines the District's goal of full transition to zero-emission technologies by 2040 that avoids early retirement of conventional buses, and adopts a AC Transit's Zero Emission Bus Rollout Plan, and sets the direction for establishing and following through with the Rollout Plan strategies that are achievable with available funds. The Zero Emission Bus Rollout Plan is specific to AC Transit and is not part of a Joint Group.

ZEB Rollout Plan Executive Leadership Contact Information

Name	Title	Phone	Email
Michael A. Hursh	General Manager	(510) 891-4753	mhursh@actransit.org
Salvador Llamas	Chief Operating Officer	(510) 891-7215	sllamas@actransit.org

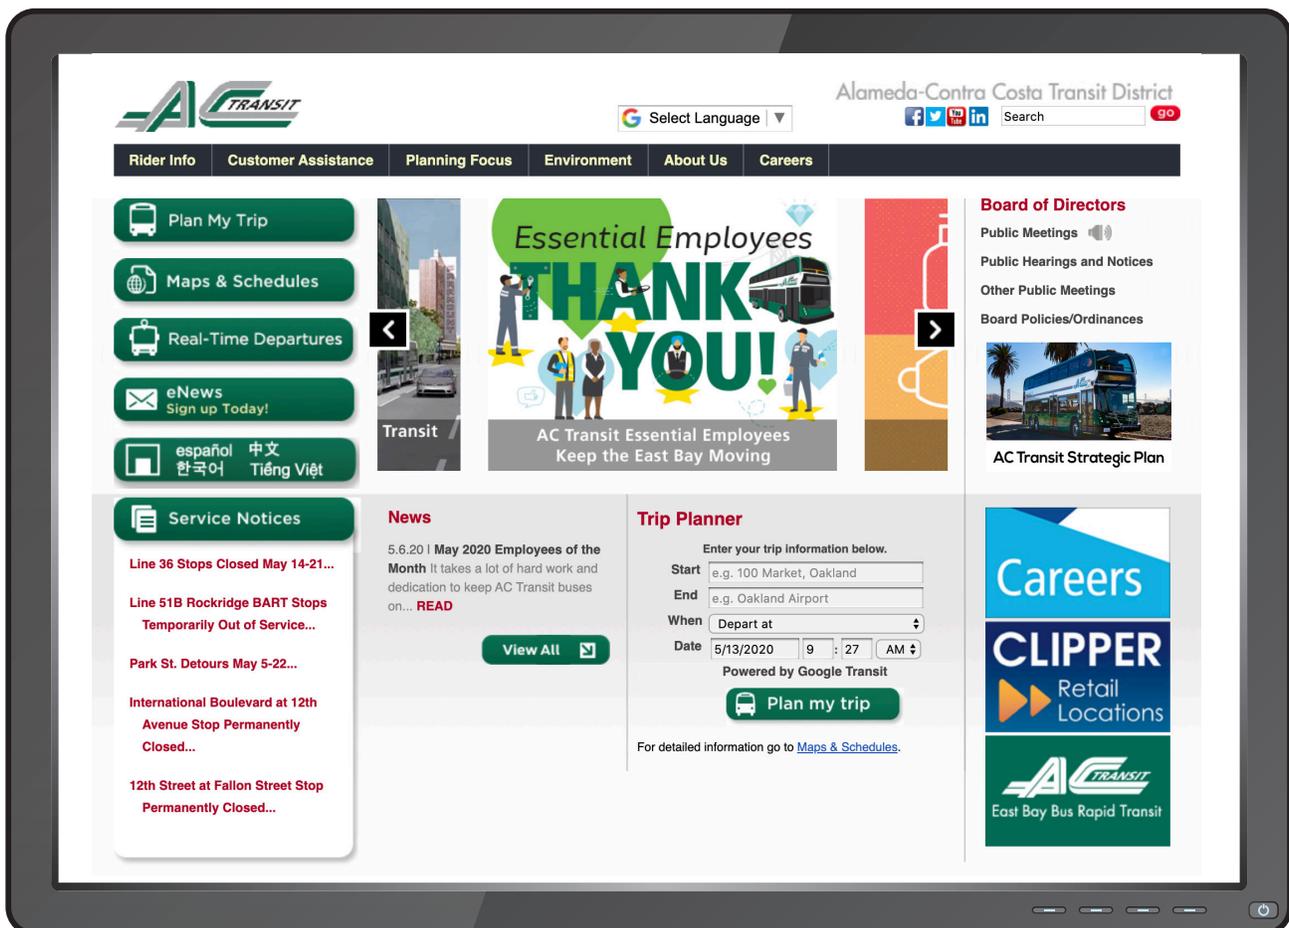

Per ICT Regulation a ZEB Rollout Plan must meet the following requirements:

- A goal of full transition to zero-emission buses by 2040 with careful planning that avoids early retirement of conventional internal combustion engine buses
- Identification of the types of zero-emission bus technologies a transit agency is planning to deploy, such as battery electric or fuel cell electric bus
- A schedule for construction of facilities and infrastructure modifications or upgrades, including charging, fueling, and maintenance facilities, to deploy and maintain zero-emission buses. This schedule must specify the general location of each facility, type of infrastructure, service capacity of infrastructure, and a timeline for construction

- d) A schedule for zero-emission and conventional internal combustion engine buses purchases and lease options. This schedule for bus purchases must identify the bus types, fuel types, and number of buses
- e) A schedule for conversion of conventional internal combustion engine buses to zero-emission buses, if any. This schedule for bus conversion must identify number of buses, bus types, the propulsion systems being removed and converted to
- f) A description on how a transit agency plans to deploy zero-emission buses in disadvantaged communities as listed in the latest version of "CalEnviroScreen"
- g) A training plan and schedule for zero-emission bus operators and maintenance and repair staff.
- h) Identification of potential funding sources
- i) Start-up and Scale-up Challenges

AC Transit's Board of Directors has approved a Strategic Plan, Clean Corridors Plan, Capital Improvement Program, Facilities Utilization Study, and Zero-Emissions Bus Study as the guiding documents to comply with the ICT Regulation requirements. The guiding documents can be found on the District's website.

AC Transit Website: www.actransit.org

SECTION C:

Technology Portfolio

Transition Goals and Technology Replacement

AC Transit remains committed to transition the fleet to 100% zero-emission buses. To initiate this process, AC Transit engaged the Center for Transportation & the Environment (CTE) in November 2017 to assess the applicability of zero-emission buses for AC Transit service and to develop a strategy and plan to transition AC Transit to a zero-emission fleet. The transition goal is to comply with the Innovative Clean Transit Regulation and have a 100% zero-emission fleet in place by 2040. The Zero-Emission Study developed five scenarios to inform AC Transit Board members and educate AC Transit staff of estimated cost, benefits, constraints, and risks to guide future planning and decision-making.

Zero-Emission Bus Study Scenarios

- 1) No changes to current fleet composition (Baseline)
- 2) All Battery Electric Bus Fleet (All-BEB)
 - a. Technology remains at current levels
 - b. Technology improves over time to maintain 1:1 replacement
- 3) All Fuel Cell Electric Bus Fleet (All-FCEB)
 - a. Technology remains at current levels
 - b. Technology improves over time to maintain 1:1 replacement
- 4) Mixed Fleet (BEB-FCEB)

An assessment of fleet, infrastructure, fuel, and maintenance cost estimates resulted in a total cost of ownership for each transition scenario. The table and chart below provide a side-by-side comparison of the cumulative transition costs for each scenario analyzed during this study.

Table 1: Transition cost estimates by scenario

* Note: scenario (a) technology remains at current levels, (b) technology improves over time to maintain 1:1 replacement

	Baseline	2a: All BEB*	2b: All BEB*	3a: All FCEB*	3b: All FCEB*	4: Mixed Fleet
Fleet	\$567,845,000	\$1,043,085,000	\$789,310,000	\$1,028,160,000	\$1,024,560,000	\$906,635,000
Infrastructure	–	\$247,896,976	\$176,231,508	\$45,220,000	\$45,220,000	\$176,231,508
Fuel	\$321,283,074	\$379,879,840	\$284,587,189	\$418,122,230	\$418,122,230	\$363,900,134
Maintenance	\$747,680,824	\$830,501,132	\$699,236,568	\$1,011,206,327	\$1,008,915,529	\$886,537,380
Totals	\$1,636,808,899	\$2,501,362,948	\$1,949,365,265	\$2,502,708,557	\$2,496,817,760	\$2,333,304,022
Incremental costs		\$864,554,049	\$312,556,367	\$865,899,659	\$860,008,861	\$696,495,124

Zero-emission bus technologies are in a period of rapid development and change. While the technology is proven in many pilot deployments, it is not yet matured to the point where it can easily replace current diesel and CNG technologies on a large scale. Battery electric buses will require significant investment in facilities and infrastructure and may require changes to service and operations to manage their inherent constraints. On the other hand, fuel cell electric buses are believed to provide an operational equivalent to diesels and CNG, however, the incremental cost of buses, fueling infrastructure, and fuel places this technology at a serious disadvantage.

As a result, AC Transit's transition approach is as follows:

1. **Remain proactive with ZEB deployments:** AC Transit has developed a reputation as an industry leader in the deployment of developing technologies. Significantly more development, data collection, and analyses are needed before the technology is ready for fleet-wide deployment. For example, BEBs will require charge management software, hardware, and standards to manage the fleet-wide transition. FCEBs will require lower fuel and station maintenance costs that will evolve over time with the production of hydrogen at scale. Thus, AC Transit will continue with small-scale deployments of both BEBs and FCEBs, taking advantage of various grant and incentive programs to offset the incremental cost. AC Transit's Board of Directors approved a Clean Corridors Plan, which identifies Disadvantaged Communities to be prioritized for zero emission bus service. Based on this proactive and strategic approach, AC Transit was awarded funds to purchase an additional 45 ZEBs.
2. **Target specific routes and blocks for early ZEB deployments:** AC Transit should consider the strengths of given ZEB technologies and focus those technologies on routes and blocks that take advantage of their efficiencies and minimizes the impact of the constraints related to the respective technologies. For example, depot-charged BEBs for shorter routes and blocks, on-route charged BEBs for mid-range routes with layovers at a transit center, and FCEBs for long routes or routes with higher speeds and/or heavier loads. These technologies cannot follow a "one-size-fits-all" approach from either a performance or cost perspective. Matching the technology to the service will be a critical best practice.
3. **Continue with both BEBs and FCEBs:** At this stage, it is too early to tell which technology will dominate the market 10-20 years from now. Having the capability to deploy both ZEB technologies creates an opportunity for AC Transit to fully assess BEBs and FCEBs to determine which technology can best meet the operational range requirements while being financially efficient and sustainable. This approach will allow staff to report annually to the AC Transit Board of Directors providing an update on ZEB performance, operations and maintenance (O&M) costs including the cost of fuel/energy, and infrastructure O&M costs. AC Transit can then modify the ZEB Rollout Plan as needed based on results of the annual report to the Board.

Rollout Plan Timeline

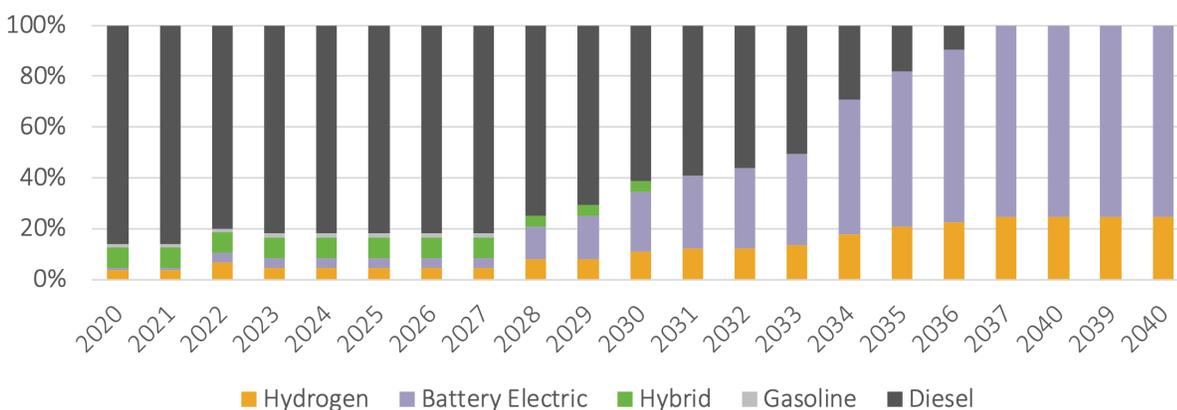

As a leader in early adoption of zero-emission bus (ZEB) technology, AC Transit (District) is in the position to fully assess which ZEB technology can best meet the service operational requirements while being financially efficient and sustainable. AC Transit's Board of Directors approved a Strategic Plan, Clean Corridors Plan, Capital Improvement Plan, Facilities Utilization Plan, and Zero-Emissions Bus Study as a foundation to forge a path towards the fleet transition and compliance with California Code of Regulations §2023.2. AC Transit's ZEB Rollout Plan serves as a blueprint for how the District is planning to achieve a full transition to zero-emission technologies by 2040, considering minimum useful life of buses.

Through more than 20-years of experience deploying ZEBs, AC Transit has learned there are still many unknowns and unexpected challenges to overcome. Both, battery electric and fuel cell electric bus technologies, have start-up and scale-up challenges as listed in Section I of the Plan. In order to successfully transition the fleet, AC Transit will need policy makers, industry original equipment manufacturers (OEMs) and energy providers to help address existing challenges and risks. As with any living document, the ZEB Rollout Plan is not binding and can be updated, adjustments will be made to the Plan as technology advances and solutions are realized.

Fleet Transition Schedule and Cost

Based on AC Transit’s current fleet replacement schedule and planned procurements, the following chart depicts the annual mixed fleet composition to achieve a goal of 100% zero-emission buses by 2040. The replacement schedule is based on the District’s Transit Asset Management (TAM) Plan, mandated by the Federal Transit Administration (FTA). ZEB technology mix is based on existing range capability and route block pairing where 75% of daily blocks are under a 170-mile range.

ZEB Fleet Transition Schedule

Using cost estimates based on the District’s current 45 ZEB deployment project, which assumes a 2020 year-of-expenditure, the total cost to successfully transition to a 100% ZEB fleet will reach \$1.1 billion. Based on earlier studies, an incremental cost of \$696 million is expected however, this may change and reduce during each procurement phase. Summarized on the chart below is the bus procurement and large-scale infrastructure cost to support each technology type. Infrastructure cost uses the current market scalability of \$28 million to deploy 50 battery electric buses (BEB) and \$31 million to deploy 200 fuel cell electric buses (FCEB).

ZEB Technology Cost

ZEB Technology	Fleet Qty	Bus Cost	Infrastructure Cost	Technology Total
Battery Electric Bus	530	\$580,000,000	\$297,000,000	\$880,000,000
Fuel Cell Bus	150	\$195,000,000	\$31,000,000	\$226,000,000
	680	\$778,000,000	\$328,000,000	\$1,106,000,000

Information Technology Infrastructure and Data Analytics Platform

AC Transit will need to invest in its Information Technology (IT) infrastructure, security, and data integration platform, to manage the increasing amount of ZEB energy and performance data. A robust and secure data collection, integration and management platform is being envisioned to minimize manual intervention when collecting data from disparate systems in real-time.

AC Transit sees tremendous value in collecting and reporting on all types of system and performance data. AC Transit will build a robust enterprise Data Analytics Platform to support the Zero Emission Buses program by optimizing energy consumption. This new Data Analytics Platform leverages the Cloud technology and includes modern database technology, Machine Learning, and enterprise Application Programming Interface (API) connectivity platform. This new platform will connect various data sources, internal and external, to acquire, store and manage the ZEB fleet related data and provide real-time reports as well as historical trends. In order to collect the data, AC Transit must have direct access to the data and the Zero Emission Bus (ZEB) equipment. Data from the ZEB equipment will be collected and uploaded to our enterprise data warehouse system using our data collection system. It will be necessary to configure and secure integrations between the ZEB data systems and our data collection system.

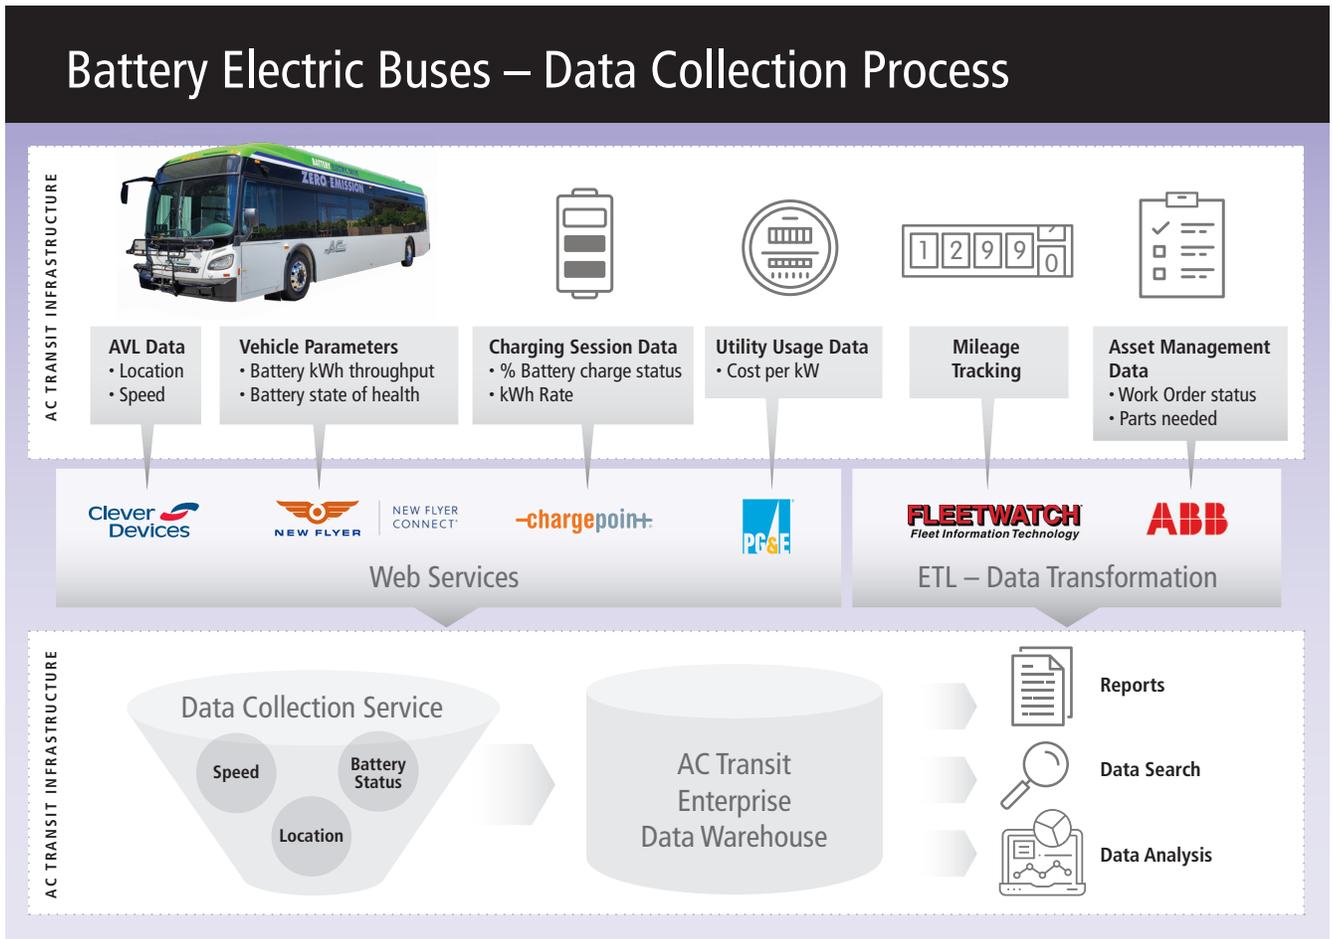

Robust, reliable and real-time connectivity will be a critical sub-system in assuring the timeliness and quality data collection. All ZEB equipment will be connected to our Local Area Network (LAN) or Wireless Local Area Network (WLAN). Network access switch ports will be made available to interconnect all ZEB equipment at our divisions and on our buses. Any data transmission outside of our network will utilize our secure Wide Area Network (WAN) infrastructure. Point to point secure VPN technology will be used to connect AC Transit to ZEB equipment and services providers.

Securing data, in transition or at rest, will be of the utmost importance for the success of this program. All transmitted and received data will be encrypted and scanned to ensure security compliance. Where appropriate, Virtual Local Area Networks (VLAN) and Access Control Lists (ACL) will be created to build logical segregation, isolate the touchpoints and protect all ZEB equipment. ZEB network traffic will be scanned, audited, and analyzed to detect unauthorized access using our network security tools. Direct access to any ZEB equipment from outside the company will be protected using secure user authentication tools and procedures.

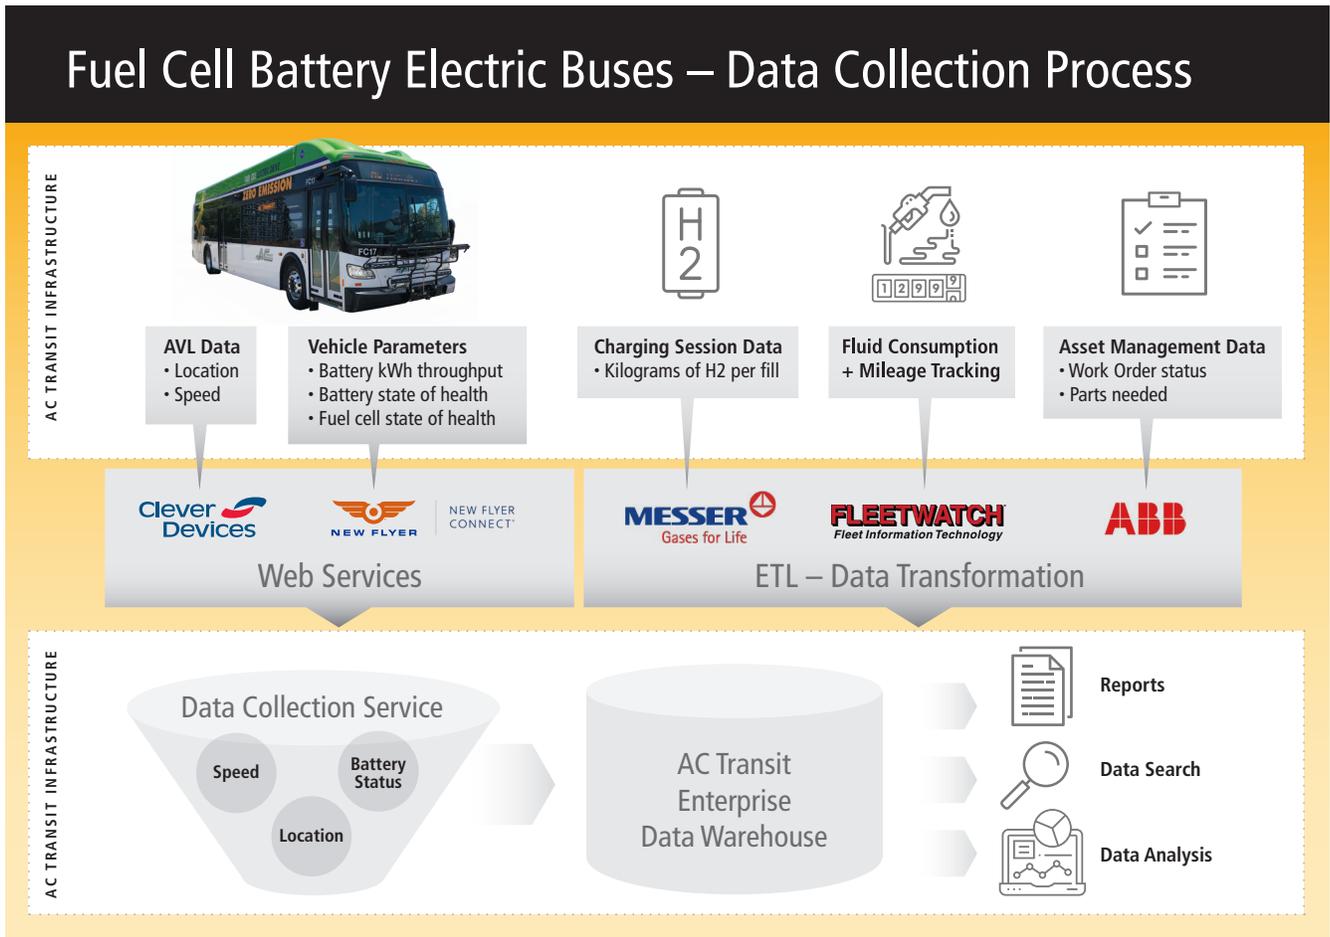

BEB Data Collection Architecture

The Battery Electric Bus data collection architecture will have a separate enterprise API module to support the collection, transformation, and analysis of electric energy and performance data due to different systems. The BEB Data Collection Architecture will use ChargePoint battery stations (% battery charge and kWh rate) and PG&E utility metering (cost per kW), Fleetwatch for mileage tracking, Vehicle Parameters from New Flyer, Clever Devices AVL for location/speed, ABB Ellipse assets and part refits for reliability and NWS for weather and environmental measurements. The Microsoft Azure Cloud software platform integrates with vendor API web services, performing data normalization and aggregation for new reports, data searches, and business intelligence/analytics, all within the AC Transit infrastructure.

FCBEB Data Collection Architecture

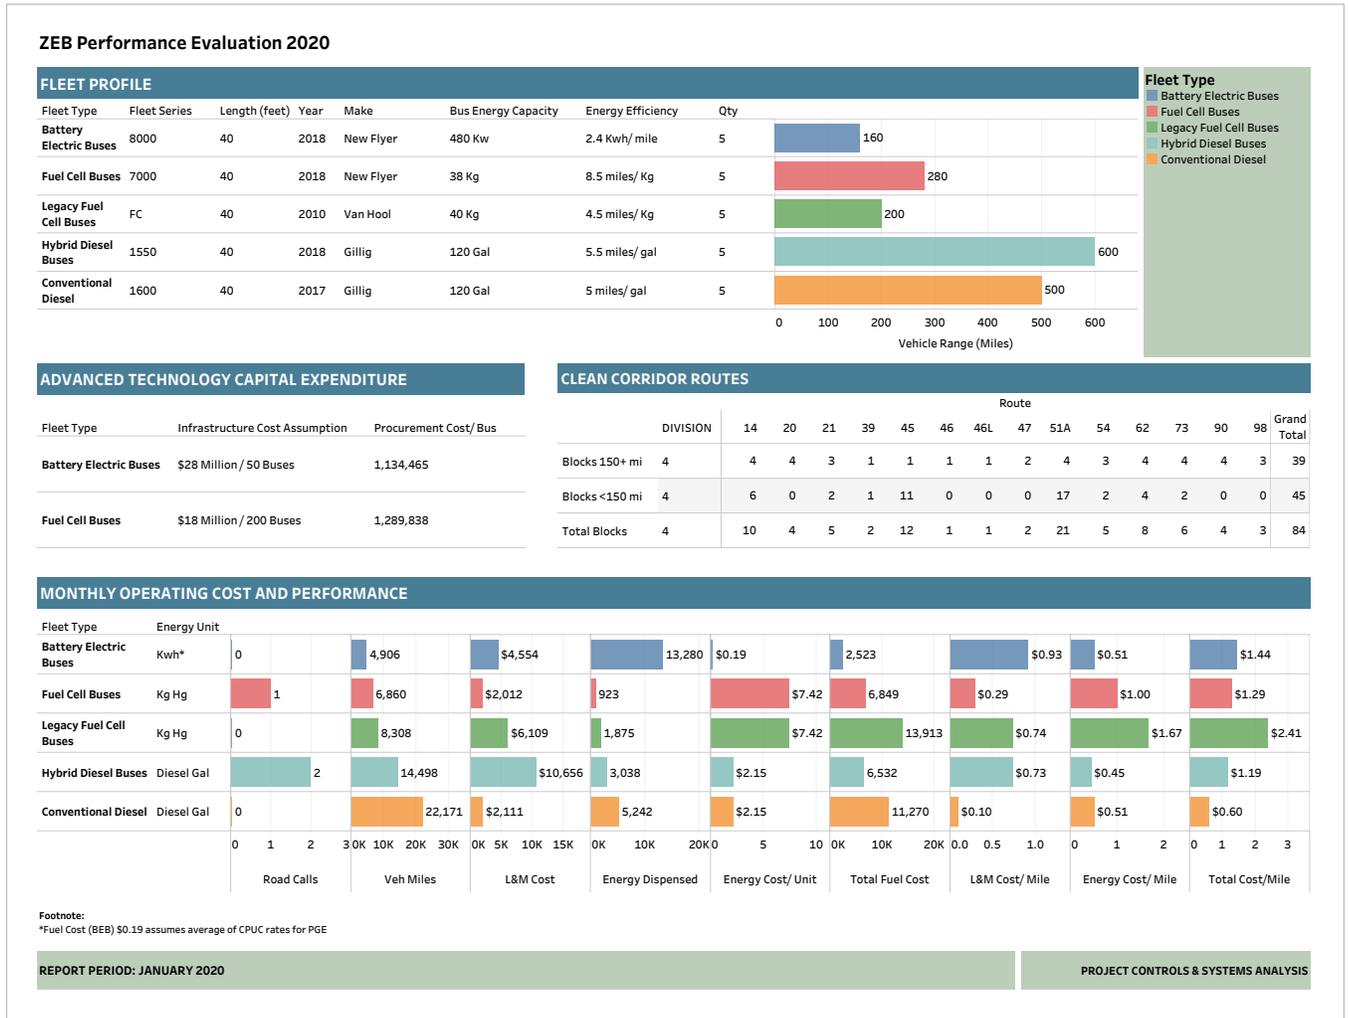

The Fuel Cell Battery Electric Bus data collection architecture will require a dedicated and separate enterprise API module to support the collection, transformation, and analysis of fuel-cell energy and performance data. Since the source of energy will be different; collection, transformation, and analysis of data will require a connectivity directly from various equipment and energy vendors. The FCBEB Architecture will use Messer H2 station, Fleetwatch for H2-kg per fill and mileage tracking, Vehicle Parameters from New Flyer, Clever Devices AVL for location/speed, ABB Ellipse assets and part refits for reliability and NWS for weather and environmental measurements. The Microsoft Azure cloud software platform integrates with vendor API web services, performing data normalization and aggregation for new reports, data searches, and business intelligence/analytics, all within the AC Transit infrastructure.

ZEB Performance Evaluation 2020

Collection, transformation, and analysis of ZEB energy, cost and performance data is currently operating within the District's on-premise servers. The retrieving feeds are used to populate reports on a set of common metrics such as mileage, road calls, fuel/energy dispensed, availability. The figure below provides an example of the District's ZEB Performance 2020 monthly report.

Report Example: ZEB Performance Evaluation 2020

SECTION D:

Current Fleet & Future Bus Purchases

Current Bus Fleet

AC Transit has over 630 active revenue vehicles that are comprised of 24, 30, 40, 42, 45, and 60-foot buses. These vehicles are distributed throughout the system based on capacity requirements of routes and trips with the busiest service using the 60-foot articulated buses. Individual routes often use a combination of bus types due to route interlining and the varying nature. The following table identifies the quantity of buses in the current fleet based on the service type.

Current Fleet Matrix

Type	Length	Year	Bus Technology	Bus Quantity
Cutaway	24	2014	Gasoline	10
Standard 30'	30	2006	Diesel	51
		2009	Diesel	39
Standard 40'	40	2003	Diesel	36
		2008	Diesel	27
		2010	FCEB (Depot fueling)	13
		2012	Diesel	65
		2014	Diesel	68
		2016	Diesel	55
		2016	Hybrid	25
		2017	Diesel	10
		2018	Diesel	35
		2019	FCEB (Depot fueling)	10
		2019	BEB (Depot fueling)	5
		2019	Hybrid	1
		2020	BEB (Depot fueling)	2
Transbay	40	2013	Diesel	54
	42	2018	Diesel	15
	45	2002	Diesel	36
Articulated	60	2006	Diesel	5
		2009	Diesel	9
		2013	Diesel	23
		2017	Diesel	28
		2019	Hybrid	27

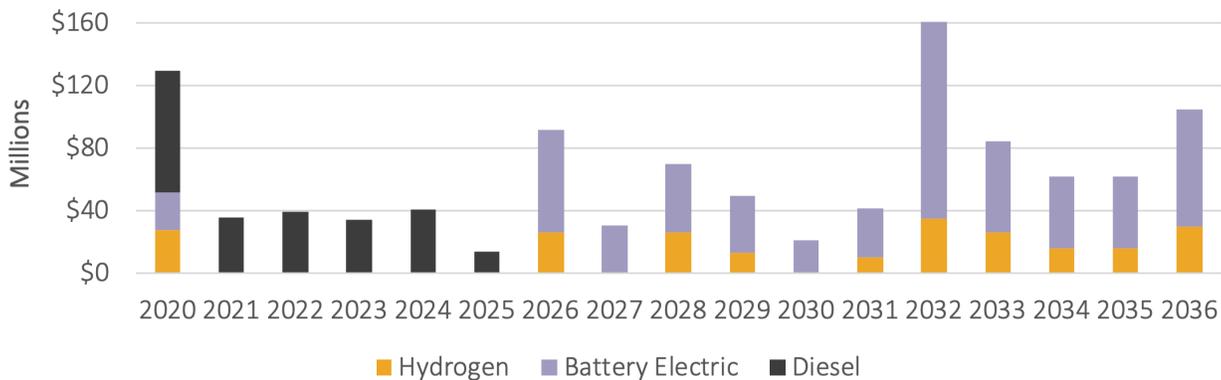

Bus Replacement Schedule

It is important to note AC Transit’s priority is to deliver safe, reliable, sustainable transit service that responds to the needs of our customers and communities, as stated in our Mission Statement. Providing transit service that is both convenient and reliable is AC Transit’s purpose. Our service and all the supporting functions in the District must be funded adequately to create convenient and reliable service. In order to comply with federal and state regulation while delivering AC Transit Board direction, the following ZEB transition guiding principles have been established.

1. Replace the fleet per Federal Transit Administration (FTA) mandated Transit Asset Management (TAM) Plan Performance Targets
2. Prioritize ZEB deployment per the AC Transit Board adopted Clean Corridors Plan
3. Procure ZEB’s based on vehicle and infrastructure technology capabilities to meet service requirements
4. Deploy ZEB technology that is most efficient and sustainable to operate
5. Meet the 2040 ICT Goal

AC Transit’s goal is to replace vehicles at the end of their useful life as defined in the Transit Asset Management (TAM) Plan. Based on the District’s current fleet replacement schedule and currently planned procurements, the following chart reflects the annual cost to purchase buses to achieve a 100-percent zero-emission bus fleet by 2040. The schedule is dependent upon funding and zero-emissions technology becoming available on more fleet types, to advance deployment on blocks that operate 300 or more daily miles, in order to move completely away from conventional diesel.

Fleet Replacement Cost

AC Transit is currently working on the purchase of 45 ZEBs and supporting infrastructure, funded by various state and federal sources. With the current committed funding, AC Transit will be able to deliver the first phase including purchase of 20 FCEBs and 20 BEBs, small-scale charging infrastructure at Emeryville, Division 2 (D2) similar to the existing charging infrastructure at Oakland, Division 4 (D4), and design of a larger, scalable charging infrastructure at D4. With additional funds, staff will purchase five additional BEBs and construct the charging infrastructure at D4.

The District is able to save considerable time and effort in the procurement process for Zero Emission Buses through the use of State Cooperative Purchasing Agreements. This is essentially a method of

the District “piggybacking” off contracts developed by State Purchasing Agencies without having to engage in the highly complex and time-consuming effort of conducting its own solicitation in advance of a properly vetted contract award. The District has recently utilized such a cooperative purchasing agreement awarded by the State of Virginia to purchase 2 BEBs and plans to purchase at least 38 more under that contract. The State of California has also recently awarded contracts to a range of BEB and FCEB manufacturers that can be used the same way. While the District engages in these types of cooperative purchases, it still conducts due diligence to ensure fair and reasonable pricing and proper contracting procedures have been undertaken during the original contract process.

Fleet Replacement Plan

Year Procured	ZEB Buses				Conventional Buses			Total Buses
	Qty	Type	Technology	Req. Range	Qty	Type	Fuel	
2020	2	Standard 40'	Battery - Depot	170	36	Over-the-road	Diesel	173

2036	68	Standard 40'	Battery - Depot	200				91
	23	Articulated	Fuel Cell	300				

SECTION E:

Facilities and Infrastructure

AC Transit has four operating Divisions supported by a Central Maintenance Facility (CMF) and a General Office (GO). CMF, located in Oakland, provides Administration, Warehouse and Maintenance functions that support all four Divisions.

AC Transit Facilities

Name	Address	Year Built	Size (sq. ft.)
General Office	1600 Franklin St, Oakland, CA 94612	1989	100,000
Central Maintenance Facility	10626 E. 14th St, Oakland, CA 94603	1984	517,000
D2 - Emeryville Division	1177 47th St, Emeryville, CA 94608	1987	392,000
D3 - Richmond Division	2016 MacDonald Ave, Richmond, CA 94801	1989	266,000
D4 - East Oakland Division	1100 Seminary Ave, Oakland, CA 94621	1987	579,500
D6 - Hayward Division	1758 Sabre St, Hayward, CA 94545	1987	833,500
Training and Educational Center	20234 Mack St, Hayward, CA 94545	1987	29,000

To accommodate projected operational needs, address current deficiencies, and continue to provide safe, reliable transit service, the District has developed a Facilities Utilization Plan to identify the District's operations and maintenance facility needs, provide a facility master plan that outlines a road map to meet near- and long-term needs, and provide a strategy for funding and financing that is coordinated with a detailed implementation plan. The Facilities Utilization Plan assumes that the District will operate a certain percentage of battery electric buses (BEBs) and fuel cell electric buses (FCEBs) and is technology neutral that will accommodate any zero-emission bus technology. The plan accommodates footprint required for fueling/charging infrastructure, maintenance capacity for FCEBs and BEBs, and bus parking reconfiguration for allowing BEB charging infrastructure. The Plan includes space to accommodate bus technology infrastructure whether it is BEB (transformers, switchgear, etc.), FCEB (hydrogen storage, compressors, etc).

While the District is working towards addressing facilities needs holistically and preparing to redevelop a Division ready to handle ZEBs, the District must also install ZEB infrastructure incrementally at the existing divisions. The needs articulated in the Facilities Utilization Plan is inclusive of ZEB infrastructure. While AC Transit needs to address the general facility needs to accommodate ZEBs, cost associated with ZEB infrastructure is estimated with \$176.2 million (2018 \$) if the fleet remains at 630 buses. For both BEBs and FCEBs, infrastructure and equipment shall be installed in advance of bus delivery.

With an initial BEB deployments, charging requirements are met relatively easily with a handful of plug-in pedestal chargers and small infrastructure investment. Scaling to a large BEB deployment requires a significantly different approach to charging and substantial infrastructure upgrade and smart charging software. Plug-in charging would not be practical for a large deployment as dispensers installed in the yard creates a hazard. Instead a preferred approach is to use overhead pantograph or dispensers attached to overhead structures, such as gantries and deck, installed across the yard. This would require reconfiguration of bus circulation and parking configurations at Divisions.

Currently Divisions 2 and Division 4 can accommodate fueling and maintenance of FCEBs. With the two divisions, AC Transit estimates maintenance capacity of 50 FCEBs and fueling capacity of 41 FCEBs. In order to expand FCEB infrastructure, such as canopy, fueling and maintenance bays. Canopy projects focus on building a structure that shall house the fueling islands where buses will be fueled with hydrogen. Since a canopy already exists at D2 and D4, these projects are only needed at D3 and D6. Each fueling project includes the design and construction of the hydrogen fueling station, including the installation of tanks, pumps and dispensers. Maintenance bays at each Division as well as CMF will require hydrogen detection and exhaust equipment. For a large scale FCEB deployment, it is best to allow all bays to accommodate FCEBs for maximum flexibility in operations.

ZEB Technology Cost Estimate

ZEB technology estimated costs were developed based on 2019 year-of-expenditure on the ZEB Performance 2020 bus procurements. The infrastructure costs were based on the ZEB technology preliminary engineering estimates and include the maximum vehicle deployment.

Bus and Infrastructure Estimated Capital Cost

ZEB Technology	Bus Procurement/ Unit	Infrastructure
Battery Electric Bus	\$1.1M	\$28M for 50 BEB Deployment
Fuel Cell Electric Bus	\$1.3M	\$18M for 200 FCEB Deployment

Construction Implementation

The District has four bus maintenance and operations facilities that require infrastructure modernization. Facility redevelopment project delivery methods are based on the facilities scheduled for the next ten years. Beyond these projects, the project delivery method will be evaluated based on experience with the initial projects and the District’s internal expertise. The Facilities Utilization Plan focuses on deploying a large-scale and scalable zero emission infrastructure, like the one planned for Division 4. Table 5 below specifies the location of each facility, and construction timeline. AC Transit is seeking funding for a large and scalable ZEB infrastructure; however, timing for delivering the infrastructure is unknown at this time.

In addition to the existing charging capacity of 6 BEBs and fueling 41 FCEBs, AC Transit is planning to add 20 BEB charging capacity at D2 in 2021. AC Transit plans to place a scalable BEB charging for 20 BEBs with a space for expanding to 50 BEBs at D4. Beyond the planned implementation, AC Transit will delivery infrastructure improvements strategically to meet the proposed vehicle replacement schedule as well as redeveloping Divisions per the Facilities Utilization Plan.

Table 5: Facilities Information and Construction Timeline

Division/ Facility Name	Address	Main Functions	Type of Infrastructure	Service Capacity	Needs Upgrade?	Estimated Construc- tion Timeline
Division 2	1177 47th Street, Emeryville	Operating Division	BEB plug-in chargers	20	Construction	2020-2021
Division 4	1100 Seminary Ave, Oakland	Operating Division	BEB overhead chargers	25 - 50	Construction	2022-2023
Division 4	1100 Seminary Ave, Oakland	Operating Division	BEB overhead chargers	200 - 250	Construction	2023-2028
			Hydrogen storage capacity and FCEB maintenance capacity		Upgrades	
Division 2 or new Division	1177 47th Street, Emeryville	Operating Division	BEB overhead chargers	180	Construction	2025-2030
			Hydrogen storage capacity, Canopy, and FCEB maintenance capacity		Upgrades	
Division 3	2016 MacDonald Ave, Richmond	Operating Division	BEB plug-in chargers	5 - 10	Construction	2023-2025
Division 3 or new Division	2016 MacDonald Ave, Richmond	Operating Division	BEB overhead chargers	100	Construction	2032-2035
			Hydrogen storage capacity, Canopy, and FCEB maintenance capacity			
Division 6	1758 Sabre Street, Hayward	Operating Division	BEB plug-in chargers	10 -20	Construction	2023-2025
			BEB overhead chargers			
			Hydrogen storage capacity, Canopy, and FCEB maintenance capacity	180		2035-2038
CMF	11600 International Blvd, Oakland	Maintenance	BEB chargers FCEB maintenance capacity	-	Construction	2025-2030

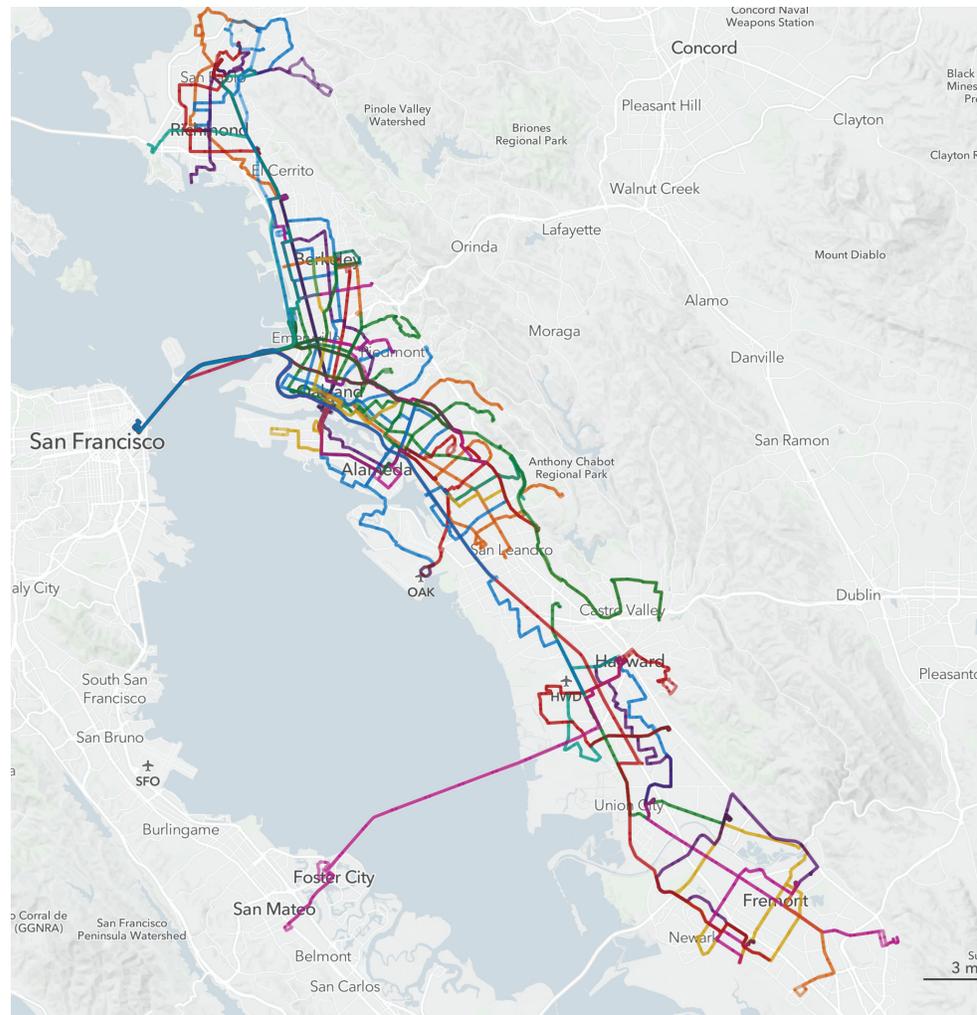

SECTION F:

Disadvantaged Communities

The District's Clean Corridors Plan identifies a series of corridors and communities to be prioritized for zero-emissions buses as the District procures more zero-emission buses. The overall goal of the plan is to have vehicles used on all lines serving these corridors and communities be completely zero-emission (whether battery-electric bus or hydrogen fuel-cell electric bus). The methodology for identifying and prioritizing the corridors and communities in that plan was as follows:

- 1) Evaluate existing conditions
- 2) Review areas identified as Disadvantaged Communities in the service area
- 3) Rank lines based on ridership and productivity to ensure maximum impact of the ZEB deployment
- 4) Consider constraints such as capacity/capability of divisions to accommodate ZEB growth
- 5) Scope out the number of vehicles and supporting infrastructure required to convert entire corridors/communities into Clean Corridors
- 6) Forecast operating and capital costs associated with conversion to Clean Corridors

Clean Corridor Lines

The clean corridor lines are grouped into their respective service area and community ridership rankings. The number of peak vehicles per line is a key factor to determine the relative impact of converting a line or service area into a purely zero-emission Clean Corridor. The average weekday ridership is divided by the number of peak vehicles required to operate that grouping of lines. Doing so allows the District to prioritize lines where the greatest number of customers can benefit from the new lines with the fewest number of buses being converted to zero-emission.

Clean Corridor Line Group

Area	Lines	Division(s)	Weekday Ridership	Peak Vehicles	Buses/ Hour/ Direction	Riders per Vehicle
Fruitvale	19, 20, 21, 39, 47, 51A, 54, O	D2, D4	19,012	41	27	704
Macarthur-Grand	57, NL, NXs	D2, D4	11,042	34	26	425
West Berkeley	51B, 52, 80, C, F, J, Z	D2, D3	16,615	38	21	791
Richmond	70, 71, 74, 76, L, LA	D3	7,400	31	20	370
West Oakland	14, 29, 36, 62, 88	D2, D4	13,503	35	17	794
Hayward	41, 56, 60, 83, 86, 97, M, S	D6	8,859	38	16	554
Coliseum	45, 46, 46L, 73, 90, 98	D4	7,758	19	14	554
North Oakland	6, 12, 18	D2	13,282	30	13	1,022
D o w n t o w n Oakland	33, 96, BS	D2, D4	6,663	18	13	513
Fremont	200, 212, 216, 232, 251, SB	D6	3,440	24	11	313
San Pablo Ave	72, 72M, 72R	D3	12,674	31	9	1,408
International	1	D4	11,469	18	8	1,434
Foothill	40	D4	8,951	13	5	1,790

SECTION G:

Workforce Training

Trained and skilled ZEB mechanics are not readily available on the job market. This will be a big hurdle for the transit industry that will require we re-think how to package ZEB training with bus procurements. Original Equipment Manufacturers (OEMs) will need to provide the training aids and tools required to advance the skills of our workforce as ZEB technology continues to evolve.

Working with technology partners and implementing the lessons learned from more than 20 years of experience, AC Transit staff developed training curriculum to kick off an ambitious ZEB University training program. Moving to a zero-emission fleet requires changes to the District's multiple operating functions. As bus charging infrastructure or hydrogen fueling capacity increases at the bus divisions, additional mechanics will need to learn maintenance techniques on zero emission bus technology. As part of the business culture, the District has a continuous training process to ensure advanced skillsets are taught to maintain zero-emission battery and hydrogen fuel cell buses.

AC Transit training staff work closely with ZEB manufacturers to ensure that required courses are implemented for all mechanics, service employees, and bus operators. This partnership between trainers and bus manufacturers also assists in developing curricula. Trainers are able to continue teaching requisite skillsets for new hires as well as for purposes of refresher training.

The training mock up (pictured right) consists of a Ballard fuel cell, air and water cooling system along with appropriate diagnostic software. The intent is to support mechanics' abilities to perform more complex fuel cell system maintenance. Topics included preventive maintenance inspections, corrective maintenance repairs, and diagnostic and troubleshooting techniques.

Safety & Familiarization

All mechanics begin with basic safety training in high voltage awareness, personal protective equipment, pertinent safety protocols, and preventive maintenance inspections. Additional training includes orientation on air systems, brakes, steering and suspension, door operations, and electrical and computer systems, including appropriate diagnostic software. More advanced or in-depth technical training entails familiarization on four major systems to include high-voltage battery energy storage system (ESS), fuel cell power plant, electric drive systems and high-pressure gaseous fuel system. The chart on the following page lists all current ZEB-related courses.

ZEB University Course Offerings

Course	Hours	Fleet
A123 Battery Training (Vendor)	8 hrs	Gillig Hybrid New Flyer FCEB
Ballard Fuel Cell - ZEB (Vendor)	24 hrs	New Flyer FCEB
Ballard Fuel Cell 10k miles PMI - ZEB (Vendor)	32 hrs	New Flyer FCEB
Fuel Cell Power Plant - ZEB	8 hrs	New Flyer FCEB Van Hool FCEB
High Voltage Electrical Safety - ZEB (Vendor)	8 hrs	FCEB/BEB
Hydrogen FC Safety and Familiarization - ZEB	8 hrs	Van Hool FCEB
Hydrogen Fuel Cell Bus Hands-On - ZEB	240 hrs	Van Hool FCEB
Lithium Ion Battery Familiarization - ZEB	8 hrs	ZEBs
New Flyer BEB Orientation - ZEB (Vendor)	3 hrs	New Flyer BEB
New Flyer BEB Srv/Maintenance - ZEB (Vendor)	24 hrs	New Flyer BEB
New Flyer FC Orientation - ZEB (Vendor)	3 hrs	New Flyer FCEB
New Flyer FCEB Maintenance - ZEB (Vendor)	32 hrs	New Flyer FCEB
New Flyer FCEB Safety & PM - ZEB (Vendor)	8 hrs	New Flyer FCEB
New Flyer Safety/Familiarization FCEB/BEB - ZEB	24 hrs	New Flyer Safety
Siemens ELFA - ZEB (Vendor)	8 hrs	VH/New Flyer FCEB and BEBs

5-Week Technical Training Program

Perhaps the most in-depth and notable course staff developed is a five-week, hands-on technical program. This program helps mechanics' understanding and retention of the training as the individual learns by working alongside a zero-emission trainer. Mechanics learn how to practice safety measures, perform preventative maintenance, advanced diagnostics and troubleshooting.

Similar to mechanics, training staff also work closely to train employees who drive zero-emission buses. Drive training is provided to both bus operators and service workers wherever a BEB or FCEB is deployed. Drive training provides each employee with both academic and behind-the-wheel drive time experiences. Topics covered include awareness of high voltage, dash controls and indicator lights, specific start-up and shut-down procedures, and defensive driving safety.

The District believes that implementing the training programs address the safety, reliability and sustainability of zero-emission buses to fully deploy this technology in public transit.

To date, AC Transit has provided mechanics with sixteen different zero-emission training programs totaling over 20,558 hours. Equally significant, staff has trained all drivers at multiple operating divisions deploying BEBs and FCEBs.

ZEB & Infrastructure Project Delivery

Operating ZEBs requires careful planning and decision making well in advance of project initiation. It takes a team of staff from many departments collaborating with precision to purchase ZEBs with timely delivery of the related infrastructure project. Training programs are being developed to provide attendees with the context and knowledge needed to understand the complexity of a ZEB deployment. Examples of topics to be covered include: ZEB procurement process, ZEB related infrastructure project delivery, the importance of pre-planning techniques, assembling a vast team of internal and external stakeholders, building and maintaining successful relationships with technology providers, regulatory compliance agencies, utility companies, fuel suppliers, contractors, first responders and other fleet operators considering electrification.

SECTION H: Funding

Sufficient funding is critical in ensuring the District can successfully implement the Rollout Plan. Replacing nearly the entire District fleet of diesel, hybrid, and older FCEB buses with new zero-emissions buses will have a significant cost impact over replacement with standard diesel buses. The new infrastructure required for fueling/charging and reconfiguration of existing facilities adds further to the cost.

Due to the uncertain nature of transit funding over a 19-year timeframe, the District will need to constantly monitor funding and financing opportunities. Through the Metropolitan Transportation Commission’s existing Transit Capital Priorities (TCP) Program, the District is eligible to receive Federal Transit Administration (FTA) funds for 70-80% of the cost of a bus replacement, with the District responsible for the remaining 20-30% local matching funds. The table below identifies the most common funding source that District could possibly utilize to fund the Rollout Plan.

The District intends to pursue funding opportunities vigorously; however, given the 2020 Pandemic and uncertain future of transit financing and ridership, it is highly likely the implementation timeline, and fleet size will change. The District will keep the Board of Directors, Funding Partners, and Regulatory Agencies apprised of this evolving situation.

Existing Funding Sources

Agency Level	Program Name
Federal	FTA Formula funds (TCP)
	FTA Low and No Emissions Program
	FTA Bus & Bus Facilities Program
State	Cap & Trade - Low Carbon Transit Operations Program (Revenue)
	Cap & Trade - Affordable Housing & Sustainable Communities
	Cap & Trade - Transit & Intercity Rail Capital Program
	SB1 Local Partnership Program (Formula and Competitive)
	SB1 State of Good Repair
Regional	Bridge Toll Capital Funds (TCP)
	Regional Measure 3
	Carl Moyer Program (CARB, BAAQMD)
	Transportation for Clean Air (BAAQMD)

SECTION I:

Start-up and Scale-up Challenges

Through more than 20-years of experience deploying ZEBs, AC Transit has learned there are still many unknowns and unexpected challenges to overcome:

- Deployment of ZEBs and infrastructure adds significant capital and operating costs
- Procurement of ZEBs now require careful timing to deliver ZEB infrastructure capital projects when ZEBs arrive on property
- Not all ZEBs are yet a one-for-one exchange of a diesel bus in terms of range and capability
- ZEB operation is vulnerable to utility company priorities and limited numbers of fuel suppliers
- ZEB technology is evolving at a rapid pace, which complicates O&M with compatibility of components and charging infrastructure.
- IT Infrastructure cost/challenges
- Funding challenges due to the uncertainty of funding availability such as the Hybrid and Zero-Emission Truck and Bus Voucher Incentive Project (HVIP), and the complexities of funding matches by type and percentages.
- Unexpected short-term and long-term impacts due to an emergency such as the COVID-19 pandemic or a natural disaster.

Without a doubt, ZEBs are readily available; however, in order to successfully transition the fleet, AC Transit will need policy makers, industry OEMs and energy providers to help address the existing challenges and risks.

It is important to note, the District's ZEB Rollout Plan is a living document meant to guide the implementation of zero-emission bus fleets and help the District work through many of the potential challenges to explore solutions. The Plan provides estimated timelines based on best available information for bus purchases, infrastructure upgrades, workforce training, or any other timelines in the Plan. AC Transit may update the Plan as needed with the most current information and industry best practices.

Subject: Brief Comments on Informational Update on Control Measure for Ocean-Going Vessels At Berth

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Clerk of the Board,

We encountered technical issues and were unable to submit our comments through the web interface. Please find those brief comments below, thank you

Dear CARB Board Members,

We appreciate the opportunity to comment on this draft of the Proposed Control Measure for Ocean-Going Vessels At Berth, and have submitted comments over the past two years including our last comment in April 2020. We join our fellow ports and various statewide partners to encourage the California Air Resources Board (CARB) to consider the delay the implementation dates of some the proposed timelines included in the rule. The main reason for this request are the substantial and material changes impacting our industry resulting from the COVID-19 pandemic and ensuing economic recession that have drastically altered our operational capabilities and circumstances. These impacts have rendered the hypothetical future estimates of emissions and cargo growth predictions, upon which the proposed control measures are based, drastically inaccurate. More time is needed to understand how the economic fallout from the COVID-19 pandemic affects California ports, the automobile and RoRo industry, and the abilities of the industry to fund the required infrastructure to implement the proposed regulations. For example, the Port of Hueneme has experienced a 35% reduction in cargo revenue and a 75% reduction in automobile cargo tonnage since the onset of the COVID-19 pandemic. Over the next year, most predictions estimate a 20% reduction in the global automobile industry and thus we anticipate seeing a correlated reduction in RoRo vessel calls. We need more time to see the impacts of how this pandemic and economic recession alter our industry.

Historically and in the present, the Port of Hueneme has been in full support of statewide emissions reductions and has been implementing a comprehensive Clean Air Plan since 2013, including the installation of a \$15 million shorepower system for container vessels. Shorepower, along with fuel regulations, have helped reduce the emission of diesel particulate matter from Port operations by more than 80% since 2008! Just last year, the Port took initiative to fund and install the only reference grade air quality monitors in our air basin. This installation will enable the calibration of various smaller monitors for use in the community and to share data with our local VCAPCD (the Ventura County Air Pollution Control District). Last year, in partnership with the Coalition for Clean Air, the Port also was the founding host of the first-ever Clean Air Day for Ventura and Santa Barbara Counties. The Port is also being proactive in building infrastructure on-dock (partially funded by CARB's ZANZEFF Grant) to power a new generation of zero emission cargo handling equipment, including an electric hybrid crane. All of these efforts are part of the Port's pursuit of a more equitable, decarbonized, zero emission future.

15-
B-15.2

However, the costs for the new infrastructure required by the proposed regulations will be shouldered by the Port of Hueneme alone, as we are both the Public Port Authority and terminal operator. The Port is a State Special District, not a wealthy multinational corporation as previous commenters have suggested. The scale of the investments needed to comply with the proposed rule are so significant that in the revenue-limited environment we are in due to the pandemic, it will be extremely challenging to meet the proposed timelines in the draft rule. With this in mind, we ask that the CARB Board consider the unprecedented downturn of the global economy and their role in the upcoming economic recovery for our community as they review the proposed deadlines of these new regulations. The Port of Hueneme is the fourth largest employer in our County, and is devoting significant resources to comply with the current regulations while keeping thousands of workers employed during this unprecedented time. We hope that the State will ensure sufficient funds are available to assist willing, enthusiastic partners like the Port of Hueneme in achieving the investment needed to clean the air we all breathe.

Best Regards,
Giles Pettifor
Environmental Manager of the Port of Hueneme

THE INDUSTRIAL ASSOCIATION
OF CONTRA COSTA COUNTY

June 24, 2020

To: California Air Resources Board
c/o Clerk of the Board
1001 I Street
Sacramento, CA 95814

Re: Proposed Control Measure for Ocean-Going Vessels at Berth

I write on behalf of the Industrial Association of Contra Costa County (IACCC), which represents approximately 50 small, medium-size, and large companies throughout the County. As members of this community, we support achieving emission reductions in port communities. It is imperative, however, that this be done in a way that is safe and achieves meaningful, lasting reductions. As currently proposed, the At-Berth Rule puts these goals at risk.

15-B-16.1 The IACCC is concerned that the latest proposed revisions have shortened the regulatory timelines without any meaningful data to support this change. This makes the implementation of this Rule, even under an ideal scenario, infeasible due to the time consuming permitting and environmental review processes we have in place throughout our region.

15-B-16.2 In addition, the new “innovative concepts” provision fails to establish a meaningful alternative path to comply with this Rule. This leaves regulated entities with no proven technologies to
15-B-16.3 comply with the regulation. Moreover, the technologies discussed in support of the Rule have not been tested for the tanker sector and could result in substantial safety issues.

15-B-16.4 For the safety of our communities, we cannot support a Rule that fails to establish safe and effective compliance mechanisms prior to adoption. We ask the Board to defer adoption of this Rule so that the safe implementation can be thoroughly understood and vetted, and so that the Rule can achieve our mutual goal of safely and effectively reducing emissions.

Your consideration is greatly appreciated.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Mark Hughes', is written in a cursive style.

**WSC Statement on Control Measure for Ocean-Going Vessels At Berth
CARB Board Hearing
June 25, 2020**

The World Shipping Council (WSC) is a non-profit trade association that represents the liner shipping industry, which is comprised of operators of containerships, roll-on/roll-off (ro-ro) vessels and vehicle carriers. WSC's members operate approximately 90% of the world's liner vessels, which make frequent calls in California ports.

CARB's current at berth rule imposes essentially all of the regulatory obligations and penalty risk on ocean carriers. To fix this problem, WSC and its members have actively encouraged CARB to modify the structure of the current rule to establish clear and appropriate obligations for shore side entities to provide the shore power infrastructure that is required to connect arriving vessels. We support the proposed rule's inclusion of appropriate infrastructure, connection and performance obligations on ports, marine terminal operators and on emissions control strategy operators.

WSC and its members have worked with CARB staff for several years to revise and improve the current at-berth rules to ensure ocean carriers are not subject to requirements that are impracticable or that fall outside of their control. While the proposed rule addresses some of WSC and the industry Coalition's concerns, many issues remain.

Our formal written comments on the December 2019 proposed rule and on the recent "15-day changes" to the rule flag the remaining problems with the rule and include reasonable and practicable recommendations to address those problems. Our comments highlight the need for changes to the proposed requirements for connection time, infrastructure planning, vessel incident exceptions and other provisions that are likely to create compliance problems for carriers.

15-B-17.1

An issue about which we continue to have serious concerns is CARB's proposal to expand, and even accelerate, the rule's applicability to ro-ro vessels (including vehicle carriers) without a definitive cost-benefit analysis and based on the hope that emissions capture technology, which has significant problems today, will become a viable control option for ro-ro vessels.

Ro-ro vessels make infrequent and very short port calls in California. Over the course of a year, each vessel in a ro-ro fleet will call only 2 or 3 times and for a very short interval. This means the CARB requirement would become a fleet requirement. The problem is that ro-ro vessels and the terminals they call have limited viable compliance options due to operational issues. For example, barge-based emissions capture systems present safety and reach issues due to the significant vertical and lateral distance to reach the vessel exhaust stacks. Shore-based emissions capture systems would obstruct cargo operations and exceed the load bearing capabilities at certain California ports.

15-B-17.1

CARB's proposal fails to demonstrate that a cost-effective and practicable pathway exists for controlling ro-ro vessels' auxiliary emissions, fails to address the major operational, safety and cost issues the proposed emissions capture systems pose for ro-ro vessels and fails to account fully for the emissions generated by emissions capture systems.

Compelling ro-ro carriers to try to comply with the rule using the operationally impractical, complex and costly emissions capture systems currently on the market is not appropriate and will delay the adoption and benefits of more practicable zero-emission technologies that still need to be developed.

Finally, WSC would support adjustments of the implementation dates back, as described in the staff brief. This additional time must be used to ensure adequate shoreside infrastructure plans are approved and implemented, address the remaining problems with rule as discussed in our comments, and properly assess the costs versus benefits and feasibility of regulating ro-ro auxiliary emissions.

Thank you for your consideration.

Doug Schneider
Vice President
World Shipping Council

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

15-B-18.1 This rule should be approved no later than August. Electric shore Power though only controls 50% emissions.
15-B-18.2 The technology of Ship Emissions capture, control and treatment is MORE EFFECTIVE. The rule must also
15-B-18.3 comply with IMO ship mandatory requirements and penalties. CARB needs to add mitigation measures. It is a
15-B-18.4 shame that the Ports use COVID-19 as the reason to extend the implementation of the rule to 2027.

Su: CARB Board Meeting Thursday June 25, 2020
20-6-4: Public Meeting To Hear An Informational Update On The
Control Measure for Ocean-Going Vessels At Berth

Re: Public Comments Submission In Response To Tanker Shipping Industry Comments

CARB Board:

The Coalition For A Safe Environment and the supporting et al organizations wish to submit our joint public comments on the proposed Control Measure for Ocean-Going Vessels At Berth Amendments.

We do not accept the majority of CARB management and staff recommended Amendments for the reasons that we have described in these written comments. In addition, there are numerous errors and omissions of information that the public has a right to know that we have also described in these public comments.

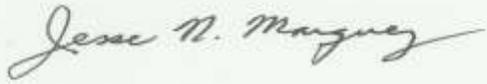

A speaker Saul ... at approximately 5:00pm representing the Tanker Ship Industry stated that the Ship Emissions Capture & Treatment Technology has never been tested or proven on a Tanker Ship. Advanced Environmental Group (AEG) the manufacturer of the AMECS-Advanced Maritime Emissions Control System has asked the Petroleum Industry to provide a ship for testing and demonstration and all companies have denied.

The Port of Los Angeles, Port of Long Beach, South Coast AQMD and CARB have done nothing to facilitate a test or demonstration project.

AEG has designed and built a new unique AMECS SPUD Barge design specifically for the Tanker Ship Industry. It addresses all Tanker Ship Industry Safety Concerns and design engineering information was submitted to the U.S. Coast Guard for their review and comment. The U.S Coast Guard found no safety issues.

For additional information the primary contact is Jesse N Marquez for these public comments.

Respectfully Submitted,

Jesse N. Marquez
