Mary D. Nichols, Chair
California Air Resources Board
1001 I Street
Sacramento, CA 95814

Re: Delay At-Berth Regulations – California’s Economic Recession

Chair Nichols:

15-B-3.1 On behalf of the International Longshore and Warehouse Union (ILWU), I am writing to request that
15-B-3.2 the proposed At-Berth regulations include protections for port workers and flexibility as California is
15-B-3.3 facing health and economic challenges. The California Air Resources Board's (CARB) Initial
Statement of Reasons supporting At-Berth regulations made a number of predictions that are no longer
likely because of the COVID-19 pandemic. The ILWU supports improving air quality in the
communities where we work and live. However, the current health crisis and resulting economic
recession have caused a decrease in work for port workers. The proposed regulations would impose
financial burdens on terminal operators and ports that would result in additional job loss. Given the
current crisis, and for the reasons detailed below, the proposed At-Berth regulations should be changed
to include the following:

- 15-B-3.4 1. **Timeline:** The current regulations mandate roll on, roll off vessels **must comply by 2024**. A vast
challenge lies ahead to develop and commercialize alternative emission capture and control
technologies and to deploy infrastructure. **The deadline for roll on, roll off vessels to be pushed
back to 2027 so that we can work with ports to find public funding opportunities to build
some of the infrastructure including bonnets.** For example, Ports such as San Diego and
Hueneme have limited or no funding to build such infrastructure. The current
economic downturn makes it impossible to meet the 2024 deadline.
- 15-B-3.5 2. **Investment:** In order to comply with the At Berth regulation, California ports will need to
purchase several systems. The State of California should invest to develop, purchase and deploy
these technologies. The funding must support equipment that is operated by a worker. **We request
that cap and trade funding and other types of funds are allocated to ports to build the infrastructure.**
- 15-B-3.6 3. **Reassessment** - We are facing an unprecedented public health crisis, which has and will continue
to have negative impacts as COVID-19 positive cases continue to increase. Countries and states
continue to assess the negative impacts and many have opened their economies only to close those
again. **We request a mechanism in the regulations that allows for a timely reassessment and greater
flexibility in the event that economic conditions require it.**

California's Economic Recession – COVID-19 Pandemic

CARB released its Initial Statement of Reasons on October 15, 2019 when California's unemployment rate was at a record low (below 4 percent). In December 2019, the State of California added 12,600 non-farming jobs. However, in March 2020, California's economy came to a halt as the State of California and local governments issued Stay at Home Orders in response to the COVID-19 outbreak. Then, California's unemployment rate jumped to 5.3 percent and 99,500 non-farming payroll jobs were lost. This is the State's largest unemployment rate increase on record since 1976. California continues to face high unemployment rates.

CARB's Initial Statement of Reasons for the At-Berth regulations stated, "Staff anticipates an increase in cargo shipping activity in upcoming years...", and highlighted a report published by Mercator International in 2016 estimating "that cargo activity in the United States will grow 50 percent between 2021 and 2032, as measured in TEUs, with activity at the POLA and POLB projected to grow by 57 percent."

15-B-3.7 However, from January 2020 to April 2020, cargo volumes have continued to decrease at California's ports because of the COVID-19 pandemic. Specifically, ports in California have experienced the following declines:

- The Port of Oakland experienced a 7.4 percent decrease in cargo volume in March 2020 compared to March 2019;
- The Port of Long Beach experienced a 6.4 percent decrease in cargo volume in March 2020 compared to the March 2019; and
- The Port of Los Angeles experienced a 30.9 percent decrease in cargo volume in March 2020 compared to March 2019.

Roll on, Roll off Vessels and Job Losses

15-B-3.8 CARB's Initial Statement of Reasons asserts that the regulations "provide job opportunities for emission control equipment manufacturers and installers, as well as engineering and construction companies." However, in addition to not accounting for the COVID-19 health crisis, the Initial Statement of Reasons fails to consider the number of jobs that will be lost as roll on, roll off Vessels go to other ports that do not impose At-Berth regulations. Roll on, roll off vessels can and will take vehicles to ports outside of California, which will eliminate port workers jobs. CARB ignores this economic impact.

Small ports in California generate a large portion of their revenue from the importation of vehicles from overseas manufacturers. In the last two months, these ports have seen a substantial decrease in vehicle imports as California's car dealer's inventory is overstocked and consumers are not making vehicle purchases. The United States is expected to see a 26.6 percent decrease in domestic vehicle sales, which is the lowest volume since 2010. Further, global light-duty vehicle production is expected to drop 21.1 percent due to the COVID-19 virus pandemic this year.

15-B-3.9 According to CARB's Initial Statement of Reasons for roll on, roll off vessels "to utilize shore power, every vessel in a fleet would have to be retrofit for shore power to maintain maximum flexibility. Shore power installations would also require significant electrical infrastructure upgrades. Most roll on, roll off terminals resemble parking lots and do not have a large amount of existing electrical equipment." Small ports do not have the economic resources to make such large investment during the current economic crisis.

15-B-3.10 Jobs at ports are middle class jobs that cannot be replaced. These jobs are a key ingredient to the economic wellbeing of the surrounding communities. CARB must take into consideration that the proposed regulations will result in job loss, which will have a devastating impact on families that have worked for generations at the ports and need these jobs now more than ever.

The ILWU looks forward to working with CARB to improve air quality in our communities in harmony with the maintenance and creation of jobs.

Sincerely,

William E. Adams
International President
International Longshore and Warehouse Union

Affiliation: Coalition For A Safe Environment

Subject: Public Comments
Comment:
CARB Board:

The Coalition For A Safe Environment and the supporting et al organizations wish to submit our joint public comments on the proposed Control Measure for Ocean-Going Vessels At Berth Amendments.

We do not accept the majority of CARB management and staff recommended Amendments for the reasons that we have described in these written comments. In addition, there are numerous errors and omissions of information that the public has a right to know that we have also described in these public comments.

Please see attachment of all public comments.

Su: CARB Board Meeting Thursday June 25, 2020
20-6-4: Public Meeting To Hear An Informational Update On The
Control Measure for Ocean-Going Vessels At Berth

Re: Public Comments Submission In Opposition To Specific Proposed Amendments
And Requests To Correct And Include Additional Information

CARB Board:

The Coalition For A Safe Environment and the supporting et al organizations wish to submit our joint public comments on the proposed Control Measure for Ocean-Going Vessels At Berth Amendments.

We do not accept the majority of CARB management and staff recommended Amendments for the reasons that we have described in these written comments. In addition, there are numerous errors and omissions of information that the public has a right to know that we have also described in these public comments.

INTRODUCTION

Ocean-Going Vessels commonly known as ships are one of the largest sources of air pollution at ports. Each ship releases 2-4 tons of air pollution daily while docked at a port terminal. Ships

burn the dirtiest petroleum fossil fuel product called Bunker Fuel which is actually a thick liquid oil fuel. Ship emissions come from three sources: Main Engines, Auxiliary Engines and Boilers.

The current At Berth Rule requires that ships must use Electric Shorepower or an Equivalent Alternative Ship Emissions Capture and Treatment Technology. The At Berth Rule does not currently apply to all categories of ships.

We support California's transition to Zero Emission Freight Transportation and Emission Capture and Treatment Technologies. We cannot meet California's air quality standards and reduce our public health crisis with weak regulations, long implementation dates, no technology certification protocols, allowing mitigation measures that by-pass compliance asap and allowing ship exemptions.

Electric Shorepower

Every major port in California is required to have at least one terminal that offers Electric Shorepower. Ships must be retrofitted to be able to plug into Electric Shorepower and most ships have not been retrofitted or because of the design cannot be retrofitted. Some port terminals only offer shorepower on one end or location of a terminal so cannot be used on all ships.

15-B-4.1

Ship Emissions Capture, Control & Treatment Technology

There is an current existing and CARB Executive Order approved technology that is using basic vacuum cleaner technology to suck-in ship emissions from ship exhaust pipes and then processes these ship air pollution emissions with a series of filters so that clean emissions are released into the atmosphere. Ship Emissions Capture, Control & Treatment Technology can be built on-dock at a terminal or on a barge which can be maneuvered alongside a ship.

The AMECS-Advanced Maritime Emissions Control System was the first Ship Emissions Capture, Control & Treatment Technology to be invented by ACTI/AEG and is approved by a CARB Executive Order that complies with the At Berth Rule. ACTI/AEG owns eight US Technology Patents and is the only company to have built both an on-dock system at a terminal that works and an on-barge system tested and used At Anchor.

Electric Shorepower vs Ship Emissions Capture, Control & Treatment Technology

Electric Shorepower can only stop and prevent about 50% of ship emissions because shorepower can only connect to the Main Engines Exhaust Pipes. Toxic air pollution is still being released into the atmosphere untreated from Auxiliary Boilers. Boilers are used to heat a ship and crude oil in tanker ships. Ships were not designed to allow extra-large cables and supporting equipment etc. to be added later. Ship Emissions Capture, Control & Treatment Technology can capture and treat 99% of emissions and therefore are more effective than shorepower. A large vacuum hose attached to an extendable articulated arm is connected to the Main Engine, Auxiliary Engines and Boilers exhaust pipes.

15-B-4.2

ISSUES

1. The Majority Of New Proposed Revisions Are Attempts By CARB Management and Staff To Support The Private Shipping Industry Making Maximum Profits And To Delay Implementation, A Continuing Historical Example of Environmental Racism

The Environmental Justice Community and Public have already seen CARB Management and Staff delay the At Berth Rule Amendments 5 years with no justification. Public Health in Disadvantaged Communities and Significant Reductions of Toxic Ship Emissions and Greenhouse Gases continues to be a low priority to CARB.

AB 617 Port Communities have already identified ship pollution as a priority reduction requirement in their CERP's (Community Emissions Reduction Plans). CARB has NO LEGAL AUTHORITY to grant any exemptions or extensions of time that it cannot legally validate.

The Environmental Justice Community and Public only requested 4 basic changes:

Commented [J1]:

- That the regulation include all categories of ships with no exemptions
- That the regulation be adopted asap
- That there be no extensions of dates or time to comply with Rule requirements
- That CARB create a standardized industry technology certification protocol

15-B-4.3

2. Major Amendments Were Made That Were Not Requested by EJ Organizations, The Public & CARB Board Members

CARB management and staff made amendments that were not requested by the EJ Community or the Public nor were they directed by CARB Board members during the public hearings.

15-B-4.4

CARB management and staff illegally accepted public comment from the shipping industry after the public comment deadline of May 1, 2020 and incorporated some of the shipping industries requests into the current proposal. The purpose of this CARB Informational Hearing is to try to cover up this illegal action by the CARB staff. The public was not allowed or advised they could continue to submit additional public comment.

The majority of Environmental Justice Community and Public Comments that were submitted were not included in the current Amendments.

15-B-4.5

3. We Want CARB Approved Ship Emissions Control Technology Certification Requirement No Strategy

We want to replace the current CARB inappropriate technology approval process of using an Executive Order and want an industry standardized CARB Approved Ship Emissions Control Technology Certification Requirement. EO's allow personal bias, industry and political influence to interfere and approve less qualified companies which is occurring now.

15-B-4.6

We want no discretionary Executive Officer approval. A technology Applicant either passes or fails a CARB Approved Ship Emissions Control Technology Certification Protocol and Requirements.

15-B-4.6

A Strategy is only a Goal as clearly stated in all Dictionaries. A Strategy is not a requirement, condition or control measure. We want clearly defined and certified Ship Emissions Technology Control Certification Requirement and Mitigation Measures.

We want all references to CARB Approved Emission Control Strategy (CAECS), emission control strategy, innovative concept and innovative concept compliance terminology to be replaced throughout the regulation with CARB Certified Approved Ship Emissions Control Technology.

The regulation states that, "To receive CARB approval, a person must demonstrate that the emission controls strategy achieves emission The word person must be replaced with "Technology."

15-B-4.7

Current Available Technologies:

- A. On-Dock Ship Electric Shorepower
- B. On-Dock Stationary Emissions Capture, Control & Treatment Technology (AMECS)
- C. At-Dock At Anchor Ship Barge Emissions Capture, Control & Treatment Technology (AMECS). Ship is docked but the barge is alongside the ship.
- D. At Anchor Ship Barge Emissions Capture, Control & Treatment Technology (AMECS) Ship is not docked but anchored in the harbor.

Available In 2020:

- A. At Dock Tanker Ship SPUD Barge Emissions Capture, Control & Treatment Technology (AMECS)
- B. At Anchor Tanker Ship SPUD Barge Emissions Capture, Control & Treatment Technology (AMECS)

Future Potential Technologies:

- A. At Anchor Ship Barge Zero Emissions Electric Fuel Cell Power
- B. Ship On-Board Emissions Capture, Control & Treatment Technology

4. We Want A CARB Ship Emissions Control Technology Certification Protocol and Procedures

15-B-4.8

We are not here to play games or here to allow CARB to continue to obfuscate its responsibilities of failing to establish badly needed standardized shipping industry Technology Certification Requirements, Compliance Protocols and Testing Procedures.

We additionally request that CARB include in the Certification Requirements that the manufacturer and/or seller provide evidence of ownership of technology patents or permission to use Emissions, Capture, Control and Treatment Technologies. CARB has issued an EO's to a company that does not own the patents or rights for its technologies and allowed that they also be awarded CARB grant subcontracts.

15-B-4.9

The regulation requires a manufacturer to provide a Warranty but Carb Staff is currently waiving those requirements and allowing a company to continue to operate out of compliance and in violation of a CARB Executive Order and CARB Subcontract requirements. i.e. Port of Los Angeles Green OMNI Terminal Project - Clean Air Engineering-Maritime, Inc. Marine Exhaust Treatment System (METS-1) and ShoreKat System.

15-B-4.10

5. We Want All Ports & Terminals To Have Specific Compliance Requirements In The Regulation

CARB staff has created unacceptable non-compliance schemes such as TIE's and VIE's for Ports and Terminals to avoid planning their ship compliance needs in advance, budgeting funds in advance, ordering adequate equipment in advance, building electric utility infrastructure in advance and purchasing sufficient equipment in advance.

15-B-4.11

Ships are required to file an Inward Forwarding Manifest with the U.S. Customs and the average ship travel time to the US is 10 days. So Ports and Terminals know in advance when a ship will arrive.

Reference: 19 CFR § 4.7a - Inward manifest; information required; alternative forms

(xv) Date of departure from foreign, as reflected in the vessel log (this element relates to the departure of the vessel from the foreign port with respect to which the advance cargo declaration is filed (see § 4.7(b)(2) or § 4.7(b)(4)); the time frame for reporting this data element will be either:

(A) No later than 24 hours after departure from the foreign port of lading, for those vessels that will arrive in the United States more than 24 hours after sailing from that foreign port;

The Ports and Terminal Operators can list 99% of all possible worst case scenarios and prepare emergency back-up contingency plans today now.

15-B-4.11

These are CARB Management and Staff elaborate schemes to allow ships to continue to maximize their profits, pollute our air and waters and allow significant Public Health Impacts to continue in our communities.

6. Applicability Shall Refer To A CARB Ship Emissions Control Technology Certification Protocol/Procedure

We do not except the meaningless CARB staff proposed CARB Approved Emissions Control Strategy. We want a CARB Ship Emissions Control Technology Certification Program, Protocols and Procedures to be referenced.

We want all responsible parties, the ports, terminal operators, ships and third party testing companies to be held jointly and severally liable for violating this Control Measure. We do not accept Staffs wording of "may be held Liable." Again another CARB staff attempt to minimize enforcement in EJ Port Communities.

15-B-4.12

7. We Want No Ship Category Exemptions For Dry Bulk, Break Bulk Or General Cargo Ships

CARB staff was directed by CARB Board Members at the December CARB Meeting to include Dry Bulk, Break Bulk and General Cargo Ships but staff has failed to include them in Table 1. CARB was presented an engineering firms data in December showing the significant amount of emissions of Dry Bulk, Break Bulk and General Cargo Ships and staff has not provided any evidence or data to validate an exemption.

15-B-4.13

Table 1: Compliance Start Dates by Vessel Type	
January 1, 2021	Container and refrigerated cargo vessels
January 1, 2021	Passenger vessels
January 1, 20242025	Roll-on roll-off vessels
January 1, 20252027	Tanker vessels that visit the ports of Los Angeles or Long Beach
January 1, 20272029	All remaining tanker vessels

- A. Container Ships
- C. Tanker Ships
- D. Dry Bulk Carrier Ships
- E. General Cargo Ships
- F. RORO-Roll-On Roll-Off Ships
- G. Passenger-Cruise Ships

CARB staff also did not include Dry Bulk, Break Bulk and General Cargo Ships in Terminal Plans. Reference: Section 93130.14. Terminal and Port Plans and Interim Evaluation

15-B-4.14

CARB staff also did not include Dry Bulk, Break Bulk and General Cargo Ships in Table 4: Remediation Fund Hourly Amount.

Table 4: Remediation Fund Hourly Amount		
Vessel Type	Hourly Remediation Payment Beginning in 2021*	
	Normal Rate	Tier III Rate
Container, Reefer, Ro-ro	\$1,900	\$1,100
Tanker with electric pumps	\$1,600	\$1,000
Tanker with steam driven pumps	\$3,400	\$2,700
Passenger vessels with capacity under 1,500 combined passengers and crew	\$5,300	\$3,200
Passenger vessels with capacity of 1,500 or more combined passengers and crew	\$12,000	\$7,100

CARB staff also did not include Dry Bulk, Break Bulk and General Cargo Ships in Table 5: Innovative Concept Application Due Date.

<u>Table 5: Innovative Concept Application Due Date</u>	
<u>Vessel Type</u>	<u>Due Date</u>
<u>Container/ Reefer</u>	<u>July 1, 2021</u>
<u>Passenger</u>	<u>July 1, 2021</u>
<u>Ro-ro</u>	<u>December 1, 2021</u>
<u>LA/LB Tankers</u>	<u>December 1, 2021</u>
<u>Other Tankers</u>	<u>December 1, 2021</u>

8. We Want Ship Emissions Compliance At All Ship Locations

15-B-4.15

- A. At-Dock
- B. At-Anchor In Port Waters
- C. At-Anchor Outside Of Break Water
- D. At-Anchor In California Coastal Waters

9. We Do Not Want CAPCOA To Be A Remediation Fund Administrator, CARB has this Responsibility Or A Qualified Mitigation Non-Profit Foundation

We do not want CAPCOA or an Air District to be a Remediation Fund Administrator and we do not approve of the use of an unenforceable and unappealable Memorandum of

15-B-4.16

<p>Understanding or "similar agreement". We want a legal signed contract between all parties.</p>	<p>15-B-4.17</p>
<p>CAPCOA and Air districts have not supported EJ Communities Proposals, Requests, Recommendations, Appeals and Lawsuits 90%+ of the time in the past.</p>	
<p>The Harbor Community Benefit Foundation in San Pedro in Southern California and the Rose Foundation in Oakland in Northern California are qualified to administer this fund.</p>	
<p>10. We Want No Extension Of Originally Proposed Dates Or Times Compliance Requirements</p>	
<p>CARB staff has proposed numerous date and time extensions which are not necessary.</p>	<p>15-B-4.18</p>
<p>11. We Want CARB To Establish Minimum At Berth Rule Port Responsibilities Information Requirements</p>	
<p>We do not want to wait for Ports to take 2-3 years to develop their responsibilities. We want CARB to hold 2-3 public hearings within 6 months to develop preliminary Port Responsibilities. They can be fine-tuned by ports who may have some special circumstances.</p>	<p>15-B-4.19</p>
<p>12. We Want No At Berth Rule Interim Requirements</p>	
<p>Any and all requirements must be mandatory and clearly defined. We want no waivers, variances and extensions for non-certified technology. There can be an approved Pilot Project or Test Demonstration in preparation for final CARB Certification.</p>	<p>15-B-4.20</p>
<p>13. We Want The At Bert Rule To Include MARPOL ANNEX VI & XIII Engine Requirements & For Ships To Provide Certificate Information</p>	
<p>International Air Pollution Prevention Certificate (IAPPC)</p>	
<p>Engine International Air Pollution Prevention Certificate (EIAPPC)</p>	<p>15-B-4.21</p>
<p>14. We Want The AT Bert Rule To Include The U.S. EPA North American and U.S. Caribbean Sea Emissions Control Areas Penalty Policy for Violations by Ships of the Sulfur in Fuel Standard and Related Provisions</p>	
<p>The regulation fails to reference and include all international IMO ship mandatory requirements and penalties. We request that CARB research and include all applicable IMO requirements for inclusion in this regulation.</p>	<p>15-B-4.22</p>
<p>15. We Want PM Emissions Standards & Compliance Data In Addition To Opacity Requirements</p>	

There is no definition of Opacity and Opacity Requirements. It essentially means how dark is the black smoke that you see and the volume. You cannot see or see clearly the smoke in the rain, on a foggy day and at night.

15-B-4.23

Opacity Requirements require a person to take a class and having opacity charts/scales to look at or to confirm an observation. So there is some personal opinion and best judgement allowed

We want to include CARB PM Standards and Testing Requirements included in the regulation.

16. We Do Not Want To Expand Use Of Vessel and Terminal Incident Events (VIE's and TIE's) To New & Growing Vessel Fleets & Terminals

15-B-4.24

All Ports, Terminal Operating and Shipping Industry have known and will know all new AT Berth Rule Requirements. All Ports and Terminal Operators have had a minimum of five years to prepare for the expansion of the At Berth Rule.

CARB staff has created acceptable non-compliance schemes such as TIE's and VIE's for Ports and Terminals to avoid planning their ship compliance needs in advance, budgeting funds in advance, ordering adequate equipment in advance, building electric utility infrastructure in advance and purchasing sufficient equipment in advance.

These are CARB Management and Staff elaborate schemes to allow ships to continue to maximize their profits, pollute our air and waters and allow significant Public Health Impacts to continue in our communities.

99% of all possible worst case scenarios are already known, can be listed and can be prepared for now, so there is no excuse to not be ready with back-up emergency power, additional emissions control and treatment technologies and including complete shut-down protocols.

All required ship forms, documentation and report requirements already exist, are on-line and there will only be a few changes and updates. 90%+ of all ship forms, documentation and reports can be prepared in advance before arrival at a port.

17. CARB's Reference To A Second Qualified Ship Emissions Capture & Control Technology Company Is A Fraud & Example of CARB Management Discrimination Against A Superior Minority Owned Technology Company

15-B-4.25

18. The Definitions Of Words Has Words That Are Not Defined In The Definitions

As one example: The definition of Anchorage includes the words "moor" and "California waters," but there are no definitions of these words.

15-B-4.26

The average person does not know what the word moor means and does not know how far out in the ocean is the California water boundary.

15-B-4.27

CARBS failure to include all important word definitions is an attempt to deceive the public as to how far outside a breakwater the At Bert Rule applies. Ports do not want any responsibility to acknowledge, identify, quantify and mitigate ship emissions outside the port. During the Covid-19 Pandemic and other events such as the Ports of Los Angeles and Long Beach ILWU union strikes and ports failures to assure that Terminal Operators had sufficient truck drivers and container chassis resulted in over 30 ships being “At-Anchorage or At-Anchor” outside the breakwater. Ships did not plug-in or use alternative ship emission control, capture and treatment technology so 100’s of tons of ship air pollution went unmitigated and public health was negatively impacted. CARB, the AQMD’s and Ports took no corrective or remedial action whatsoever.

The term At Anchor is used more often than At Anchorage and should also be included in the definitions.

15-B-4.28

We want the requirement and definition of Certification to be included in the definitions.

15-B-4.29

19. CARB Staff Has To Stop Making Up Definitions That Confuse The Public & Use Governmental Agency Or Industry Definitions

CARB staff needs to clean-up definitions. There are numerous errors and omissions.

There is no definition for IMO and does reference all the mandatory worldwide ship requirements that are applicable in this At Berth Rule.

15-B-4.30

The rule defines Remediation Fund but has no definition of Remediation.

15-B-4.31

There is a Tanker Boiler definition but fails to state that all ships have and use Boilers. Tanker Ship Boilers are also the largest source of emissions.

15-B-4.32

There is a Utility definition that is not correct or accurate. One accurate definition of Electric Utility is: An electric utility is a company in the electric power industry that engages in electricity generation and distribution of electricity for sale generally in a regulated market. Where does staff get the word “any person engaged in...?”

15-B-4.33

We want a review of all word definitions and all words contained in this regulation.

15-B-4.34

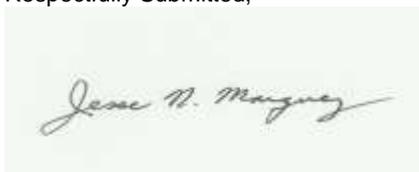

20. CARB Staff has Proposed No Enforcement, Penalties And Fines Section

We want a chapter or section that clearly outlines and describes CARB’s Enforcement, Penalties And Fine Responsibilities.

15-B-4.35

For additional information the primary contact is Jesse N Marquez for these public comments.

Crowley's¹ Written Comments for the July 25-26, 2020 CARB Board Meeting:

**The Case for Including Large Articulated Tug Barges
In the At-Berth Rule**

Crowley submits that it would be serious regulatory mistake for California to exclude articulated tug-barges (ATBs), especially those capable of carrying more than 120,000 bbls., from the emissions reduction requirements of the proposed At-Berth Rule.² CARB currently proposes to append a specific ATB exclusion to the Rule's definition of ocean-going tankers, a definition that would otherwise clearly apply to ATBs of more than 120,000 bbl. capacity.³

From an environmental perspective, CARB should seek to adopt a regulation that, as a matter of policy, is as comprehensive as possible. The citizens of California, including, not the least, the disadvantaged communities living in the vicinity of the State's port facilities, are owed such a regulation. The exclusion of ATBs from the At-Berth Rule is inconsistent with this goal.

ATBs account for more than half of the Jones Act tank vessel fleet carrying clean petroleum products (CPP) on the U.S. West Coast.⁴ Annually, ATBs carry at least 15%, by volume, of the total CPP transported by sea to and from California ports; Crowley's ATBs alone carried 32,072,420 bbls. of CPP in California from January 2019 through April 2020.⁵ By any measure, ATBs are a major part of ocean-going tanker traffic in California today. To exclude ATBs from the At-Berth Rule therefore makes no sense.

The only rationale offered for the proposed ATB exclusion is the following comment, set forth in the Initial Statement of Reasons ("ISR"):

"When an articulated tug barge is fully connected, it may meet the definition of an ocean-going vessel, as defined in this chapter (Section 93130.2(b)). However, despite being defined as a subcategory of tankers, articulated tug barges are considered a barge and a tug separately." [ISR, p. IV-6.]

¹ "Crowley" refers herein to Crowley Maritime Corporation and its affiliates. Crowley is a privately-held family- and employee-owned diversified U.S. maritime company. One of Crowley's business segments owns, operates and manages conventional and dual fuel (LNG) vessels, including tankers, container ships, multipurpose, tugboats and barges. See, www.crowley.com.

² The Proposed Control Measure for Ocean-Going Vessels at Berth ("the At-Berth Rule").

³ 17 California Code of Regulations, section 93130.2(b) provides a definition of "ocean-going vessel", which, but for the specific exclusion, would clearly apply to ATBs with more than 120,000 bbl. capacity. Moreover, the definition of an ocean-going vessel is referred to in the Initial Statement of Reasons, specifically the requirement that the vessel be "generally greater than 400 feet, weigh more than 10,000 gross tons, and have per-cylinder engine displacement of greater than 30 liter/cylinder", *exactly describes* Crowley's 550 and 650 Class ATBs.

⁴ There are 9 ATBs and 7 Medium Range (MR) tankers currently operating in the U.S. West Coast Jones Act clean petroleum product trade.

⁵ These figures are based on Crowley's internal analysis and up to date data.

The ATB exclusion is evidently based on the last part of the second sentence: that ATBs are “considered a barge and a tug separately”.

This comment is unattributed and unsupported by reference to any industry studies. Most importantly, as applied to operations of ATBs at berth, this statement is untrue. Indeed, it betrays a fundamental misconception of what an ATB is and what it does.

Operationally, there can be no justification for discriminating between an ATB of at least 120,000 bbl. capacity and any other ocean-going tank vessel. While in transit, maneuvering, and at anchor, ATBs fully comply with all Federal and California requirements applicable to all tankers of similar capacity, including CARB’s Vessel Clean Fuel Regulation. While at berth, a 120,000 bbl. capacity ATB is undoubtedly the functional equivalent of a tanker.⁶

Crowley, a leader in the U.S. maritime industry, has developed an unrivaled ATB fleet that includes the newest and most sophisticated U.S.-flagged ATBs of more than 120,000 bbl. capacity. As an interested person and through its experience and expertise, Crowley is uniquely positioned to provide CARB with the information it needs to understand these ATBs.

From the start of the rulemaking process, Crowley has urged CARB to reexamine the ATB exclusion. Crowley personnel have repeatedly, and in a timely manner, brought to the attention of CARB staff and Board Members the problematic issues of excluding ATBs from the At-Berth Rule and have consistently responded fully to all questions from CARB on this topic.

For instance,

-- At CARB public meetings in February 2019 regarding the At-Berth Rule, Crowley raised the issue about the inclusion of ATBs in the emissions inventory, and were told that, at that stage, ATB emissions were not included.⁷ Following those meetings, Crowley reached out to CARB in April 2019 and arranged a face to face meeting with CARB Staff in May 2019 to explain the sense of including ATBs in the At-Berth Rule, and Crowley subsequently submitted a letter and ATB information and data to CARB.⁸

⁶ The ISR defines tanker vessels as those vessels “designed to carry liquid or gaseous products, including crude oil or other hydrocarbon products, such as Liquid Liquefied Petroleum Gas (LPG), Liquid Natural Gas (LNG); chemicals, such as ammonia, chlorine, and styrene monomer, asphalt, and even fresh water. [ES-2] As with the definition of ocean-going vessels, this exactly describes Crowley’s 550 and 650 Class ATBs.

⁷ It remains unclear if any statistics relating to ATBs, for instance, data as to vessel calls, were ultimately been included by CARB in the analysis set forth in the ISR. This is crucially important, for there is an obvious problem with excluding ATBs from data relating to calls and emissions from other ocean-going tankers: not taking into account over half of the Jones Act West Coast CPP fleet when drawing up the emissions inventory would distort and obscure the true situation -- specifically, by understating the overall emissions from ocean-going vessels and understating the percentage contribution of non-ATB tank vessels. Any analysis that excludes ATBs will be misleading.

⁸ Letter dated May 31, 2016 from Bill Metcalf, Vice President, Crowley Shipping, to CARB Staff. The May 31, 2016 letter enclosed detailed data demonstrating the similarities between the operations of three Crowley ATBs, and three Crowley-managed ocean-going tankers.

-- Crowley was in contact with CARB during June, July and October 2019, and on hand should CARB need further information regarding ATB operations and regulation.

-- In December, 2019, Crowley submitted formal comments on initial At-Berth Rule⁹, and thereafter submitted comments on the 15-day changes¹⁰, and the CARB Commercial Harbor Craft concepts.¹¹

-- In April and May 2020¹², Crowley has consistently been in contact with CARB about this issue. U.S. Representative Garamendi has also reached out to CARB to give his view that the exclusion of ATBs makes no sense.¹³

The removal of the ATB exception from the At-Berth Rule is crucial for the continuation of Crowley's ATB operations in California. As its comments and communications demonstrate, Crowley is committed to the regulation of its ATB fleet under the At-Berth Rule because it believes that this is best for strengthening California's air quality regulatory scheme, and for the sake of fairness among the maritime industry. Including ATBs in the At-Berth Rule would allow for consistency in the regulations applied to all other ocean-going tank vessels, and it just makes common sense. Crowley will therefore continue to press for the adoption of the correct regulation, including, if necessary, by petitioning for a specific amendment to remove the ATB exclusion and, if no action is taken, by resorting to legal options.

Section 93130.2(b) of the proposed regulation defines an ATB as "a tanker barge that is mechanically linked with a paired tug that functions as one vessel".¹⁴ But an ATB is much more than that.

An ATB is an innovative, highly efficient, and flexible form of modern tank vessel. Crowley's ATBs, developed over years of research, testing and partnering with customers, are designed to operate and perform at service speeds of up to 12 knots for the 550 and 650 class. Cargo is carried in a hydrodynamically-efficient tank barges with a double hull configuration, and built under ABS SafeHull program for maximum environmental protection, which are equipped with sumped cargo tanks, remote radar gauging, two ballast pumps, a dual-mode inert gas vapor

See, also, correspondence dated May 6, 2020 from Dan Smith, Crowley Director of Sustainability, to David Quiros of CARB, and enclosed scope of work cold ironing analysis for Crowley's ATB, supplementary data to the reclassification request and data regarding Crowley barge and tug engines, a response to Mr. Quiros' email of May 4, 2020.

¹³ Rep. Garamendi letter dated April 6, 2020.

¹⁴ Section 93130.2(b)(5); ISR, p. IV-6.

collection system for maximum safety, and other systems designed for safety and efficiency. The vessel cargo systems are designed to provide maximum flexibility and cargo integrity while also allowing for transfer rates of up to 20,000 to 30,000 barrels per hour, depending on vessel class.

ATBs are propelled and maneuvered by a high-horsepower tug that is physically a part of the whole vessel, positioned in a notch in the stern of the barge, and attached by rigid, articulating pins. Through this attachment, ATBs function as a single unit in a system that allows for improved maneuverability and sea-keeping.

Crowley operates seven of the nine ATB class vessels currently operating on the U.S. West Coast; three 550 Class ATBs¹⁵ three 650 Class¹⁶, and a newer ATB that is currently operated primarily in the Alaska market.¹⁷

The 550 Class ATBs were developed and designed specifically for West Coast operations and weather conditions, with advanced safety features such as double hulls, segregated ballast and radar gauging systems. The 550 Class ATBs have a capacity of 155,000 barrels at 96% capacity; they are designed to carry clean petroleum products, and provide maximum cargo flexibility. 550 Class ATBs include several innovative safety features.

The three 650 Class ATBs are part of a fleet of ten 650 Class vessels.¹⁸ Each 650 Class ATB has a capacity of 178,000 barrels at 96% capacity. The 650 Class ATBs have a proven design for full ocean service, coupled with systems that enable multiple trading capabilities, so allow for use in the U.S. Gulf to West Coast, and West Coast trades. The 650 Class ATBs are designed to carry clean petroleum products, and heated cargoes to provide maximum cargo flexibility. Crowley's ATBs feature other safety features, including a cargo pump in each of the 14 cargo tanks to assure maximum cargo integrity and segregation flexibility.

During operations in California waters, which include transit, maneuvering, at anchor and operations at berth, Crowley ATBs do not detach the tug from the barge and the tug does not come out of the notch of the barge. At berth, an ATB of over 120,000 bbl. capacity functions as an ocean-going tanker. Under the circumstances, CARB's stated reason for excluding ATBs from the At-Berth Rule -- that ATBs are "considered a barge and a tug separately"¹⁹ -- is clearly incorrect. To base the ATB exclusion on such a statement would be arbitrary and capricious. In the absence of any justifiable reason, the CARB exclusion should be removed from the regulation.

¹⁵ Sea Reliance /550-1, Sound Reliance /550-2, and Ocean Reliance / 550-3.

¹⁶ Vision/ 650-10, Gulf Reliance / 650-2 and Commitment / 650-6.

¹⁷ The Aveogan/Oliver Leavitt, an Alaska Class 100,000 bbl. capacity ATB used to transport multiple clean petroleum products for the Alaska market.

¹⁸ For business reasons, Crowley requires that all of its 10 650 Class ATBs be California-compliant. Therefore, in calculating its total potential costs of complying with California regulations, Crowley takes into account all 10 vessels in the 650 Class fleet.

¹⁹ ISR, p. IV-6.

The existing California regulations, as they are applied to ATBs, are far from ideal. Until now, CARB has chosen to regulate the engines on ATB tugs under the Commercial Harbor Craft rule. Even if intended only as an interim measure prior to the extension of the At-Berth Rule, this was never a perfect solution.

Crowley's ATBs perform only a fraction of their activities in California waters and, when they do, their California operations are functionally the same as other ocean-going tankers; most notably, the ATB tug is not detached from the ATB and is part of a single unit. Under the circumstances, regulating the engines on ATB tugs as if the tugs were performing the same operations as harbor tugs is nonsensical when the At-Berth Rule provides a better alternative.

In addition, the operations conducted on Crowley ATB barges are not regulated under California rules at all. While federal and international standards apply to such operations, California has not adopted a regulation to cover the at-berth operations of an ATB barge of at least 120,000 bbl. capacity.

There are several aspects of that proposed At-Berth Rule that provide the opportunity to correct these anomalies, and to regulate ATBs properly. The Rule will now extend to ocean-going tanker operations in California ports, of which, as discussed above, ATBs are a substantial portion. The Rule also recognizes the need to regulate not only the emissions from main engines on tankers, but also emissions from diesel auxiliary engines that provide the vessel's electrical power needs and product pumping requirements while the vessel is at berth. ATBs should be regulated in a similar fashion. Finally, the proposed regulation also provides for flexibility in using shore power or alternative controls, including capture and control systems and onboard technologies, that may be an effective way to reduce at-berth emissions. It therefore makes sense to regulate ATBs under the At-Berth Rule.

There is no objective evidence to suggest that it would be environmentally preferable to retain the regulation of ATBs under the Commercial Harbor Craft Rule. CARB does not refer to any study based on empirical research that addresses potential emissions from ocean-going ATBs conducting operations at berth in California. The decision to not to include ATBs in the At-Berth Rule appears based only on an arbitrary choice that reflects a misunderstanding of the nature and operations of ATBs, especially those of more than 120,000 bbl. capacity.

Under the circumstances, if ATBs are included, the At-Berth Rule would represent a substantial step forward for California. By contrast, if ATBs were excluded, the effectiveness of the At-Berth Rule would be undermined.

Removing the ATB exclusion, in addition to being common sense, would strengthen both the At-Berth Rule and the Commercial Harbor Craft regulation, which otherwise may be open to legal challenge on Constitutional grounds. Crowley's ATBs are engaged in commercial operation for major U.S. companies. As U.S. flag vessels, they operate coastwise and carry petroleum products between terminals in other states and California marine terminals. ATBs of at least 120,000 bbl. capacity are thus vitally important articles of interstate commerce. In this case, if the practical effect of excluding Crowley ATBs from the At-Berth Rule is that ATB engines must comply with the new proposed Commercial Harbor Craft rules, it is possible that Crowley would no longer be in a position to operate at least some of its ATBs economically in California.²⁰

Therefore, if the At-Berth Rule were to exclude ATBs, the effect of California's regulatory scheme for ATBs may be to exclude from the U.S. West Coast trade a notable portion of the vessels currently carrying clean petroleum products. If so, the ATB exclusion from the At-Berth Rule may, in addition to other defects, be found to constitute an impermissible discrimination or a disruption of interstate commerce, and, on this ground, may be unenforceable.

There is a simple, common sense solution: remove the ATB exclusion from the At-Berth Rule. The exclusion is based on an arbitrary, capricious, unsupported and unsupportable rationale that makes no common sense. The text of the At-Berth Rule should be amended to remove the ATB exclusion, either now or by subsequent amendment following the submission of a petition to amend.

²⁰ Crowley has previously disclosed to CARB, (see, Comment on Commercial Harbor Craft concept dated April 29, 2020) the likely costs of retrofitting or replacing the engines on its ATB fleet.

Subject: Control Measure for Ocean-going Vessels At Berth

Comment:

Air emissions from vessels at berth in California ports are composed of dangerous quantities of Particulates and Nitrogen Oxides - each day and on an annual basis - that seriously affect the air quality of nearby communities, especially children and other vulnerable residents. The carbon dioxide emissions from vessels at berth significantly contribute to climate impacts and ocean acidification, negatively affecting marine life ecosystems and our commercial aquaculture industry. **The organization I represent in these comments FULLY SUPPORTS ARB in finalizing the statewide Proposed Control Measure for Ocean Going Vessels At Berth.**

15-B-9.1

Thank you for acting to protect public health and welfare in our state.

California Air Resources Board
P.O. Box 2815
Sacramento, CA 95812-2815
Submitted Via Electronic Comment Log

Subject: Comments for CARB Board Meeting on June 25, 2020, Agenda Item 20-6-4: Public Meeting to Hear an Informational Update on Control Measure for Ocean-Going Vessels At Berth

Dear Ms. Csondes:

The Port of Oakland (Port) appreciates the opportunity to comment on the Proposed Control Measure for Ocean-Going Vessels At Berth (Proposed Control Measure). The Port understands that the California Air Resources Board (CARB) is planning for the Proposed Control Measure to replace the current Airborne Toxic Control Measure for Auxiliary Diesel Engines Operated on Ocean-Going Vessels At Berth in a California Port (current At-Berth Regulation), with the goal of having the new rule in place in 2021.

Briefly, the Port has the following comments:

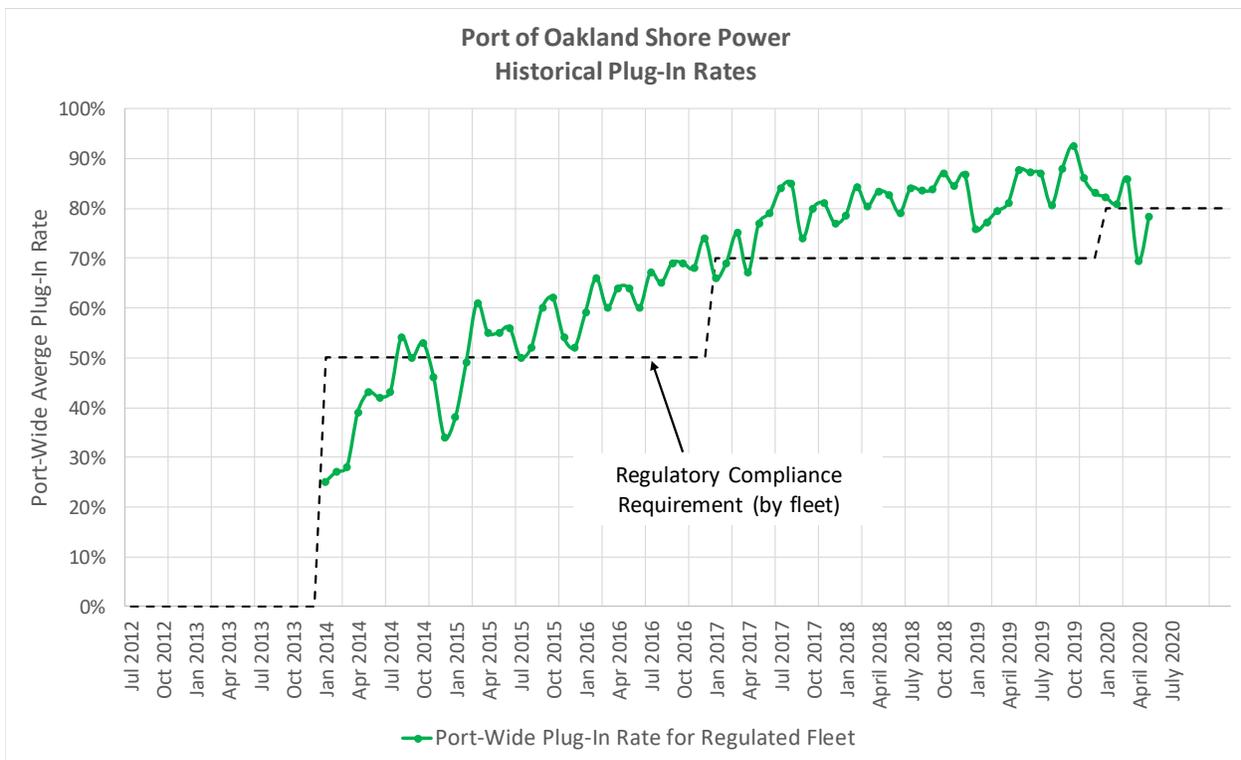

- The current at-berth regulation is successful and should be maintained for containerships
- The Port of Oakland has no feasible Alternative Compliance Method
- The foundational analysis for the Proposed Control Measure is flawed
- TIEs vs. VIEs create a potential for conflict

Before giving detailed comments on the regulation, the Port questions whether CARB's timeline for implementing the Proposed Control Measure is still appropriate and feasible. As CARB is aware, California and U.S. seaports and goods movement industry stakeholders are responding to an unprecedented global economic and public health crisis. The maritime industry, which includes California and U.S. seaports, is included within the transportation critical infrastructure sector defined by the Department of Homeland Security. The maritime industry, operating under extraordinarily challenging public health, safety and financial conditions due to the COVID-19

15-B-10.1 pandemic, has swiftly reprioritized and reallocated scarce personnel and financial resources to ensure the continuity of essential supply chain services to the public, communities, businesses and local, state and federal government agencies around the United States. It seems problematic and inattentive to these challenges for CARB to require California seaports, terminal operators, and shipping companies to divert their limited resources and attention to this rulemaking process and subsequent requirements when lives and jobs are at risk. We respectfully request that CARB place the rulemaking process on “pause” to allow the maritime industry to focus its resources and attention on the performance of its critical supply chain functions and services in response to the COVID-19 pandemic. CARB could use this time to refine the analysis that serves as the foundation for the Proposed Control Measure

The Current At-Berth Regulation is Successful and Should be Maintained for Containerships

The current At-Berth Regulation has proven to be successful for containerships. The graph below shows the Port of Oakland’s shore power plug-in rate since 2014 for the regulated fleet.¹ This graph underscores the effectiveness of the current At-Berth Regulation.

It is clear that ships coming to the Port of Oakland consistently over-perform in terms of the required regulatory compliance plug-in rates. The decline in plug-ins in April 2020 was due to

¹ Steamships and infrequent callers not subject to the current regulation are not included in this graph.

the Port’s inability to perform vessel commissioning due to COVID-19, however the Port fully expects the plug-in percentages to rise since that the Port resumed commissioning in May 2020.

15-B-10.2 The Innovative Concepts provision provides a pathway “for regulated vessel fleets to continue using fleet averaging methods to comply with the Proposed Regulation.” If the current regime is already acceptable as an Innovative Concept, why not let the current regime stay in place? Why force the carriers to re-apply every three years for a proven method that is already working? The application process with public review is burdensome and the three-year limit injects uncertainty.

The Port of Oakland recommends that CARB maintain the framework of the existing At-Berth Regulation for containerships. California’s container shipping industry has successfully coalesced around this existing regulation, is complying well with the regulation and is achieving the desired compliance levels and air quality reduction outcomes.

The Port has No Feasible Alternative Compliance Method

15-B-10.3 According to CARB’s own analysis, the Port of Oakland has no feasible alternative compliance method at three out of four of its terminals (representing 83% of the Port’s call volume). This means that carriers relying on a barge-mounted bonnet system for compliance at the San Pedro Bay Ports will not be able to call Oakland, where the only feasible compliance method is shore power. This puts the Port of Oakland at a substantial competitive and operational disadvantage, especially as compared to its competitor ports outside California in Tacoma, Seattle, Vancouver, and Prince Rupert. Diverting cargo to distant seaports leads to increased emissions, undermining the purpose of the regulation.

The Foundational Analysis for the Proposed Control Measure is Flawed

The analysis that serves as the foundation for this rule both underestimates the efficacy of the current At-Berth Regulation *and* overstates the benefit of the Proposed Control Measure. The discrepancies listed below need to be addressed.

15-B-10.4 a. The emissions benefit calculation caps the benefit of the current regulation at 80%. This is incorrect because it ignores demonstrated overcompliance due to 1) the provision requiring every vessel capable of plugging in to do so, 2) the long call durations at the San Pedro Bay Ports resulting in ~96% emission reductions, and 3) the fact that some infrequent callers are plugging in even though they are not required to do so.

15-B-10.5 b. CARB’s 2016 baseline data do not seem reliable. Comparing summaries by vessel class size to the Port of Oakland’s own data (used for billing and subject to audit), the values are off by up to 40% in critical areas.

15-B-10.6 c. As recognized by CARB staff, the assumed growth rate for the Port Oakland is too high. The inventory assumes a 5% compounded annual growth rate (CAGR) for the Port of Oakland, which CARB staff have agreed should be lowered to 2.2% to be in line with the recently finalized Bay Area Seaport Forecast (by Tioga Group for the San Francisco Bay Conservation and Development Commission, dated May 22,

2020). Considering the current COVID-19 crisis and the related documented decline in cargo throughput at California seaports, the 5% CAGR is highly speculative and unreliable at best and should not serve as the analytical basis to estimate projected emissions reductions and cost-effectiveness of the Proposed Control Measure.

15-B-10.7 CARB inventory staff have acknowledged these issues in a many phone calls and emails to Port of Oakland staff. CARB staff members have said that they will address these issues in Summer 2020, which is too late to make the required adjustments or revisions under the proposed rulemaking and adoption schedule.

The Port suggests that CARB take the time available now during the COVID-19 crisis to reassess its baseline data, compliance assumptions, and inventory calculations. The Port has kept meticulous shore power records and would be happy to share information and provide reliable data sets to CARB.

TIEs vs. VIEs and the Potential for Conflict

15-B-10.8 The Port is concerned about the Proposed Control Measure's potential to create conflict and failure rather than collaboration among terminal operators, vessel operators and a local seaport. The Port of Oakland has expressed this concern in previous correspondence (i.e., letters submitted in the public record) to CARB. Specifically, the Port is very concerned that the proposed complex regime of TIEs and VIEs will lead to disputes, rather than collaboration, among terminal operators, vessel operators, and a local seaport. It is doubtful whether CARB enforcement staff possesses the necessary dispute resolution expertise to referee the foreseeable conflicts. Again, the Port of Oakland recommends that CARB maintain the framework of the existing At-Berth Regulation in place for containerships.

Closing

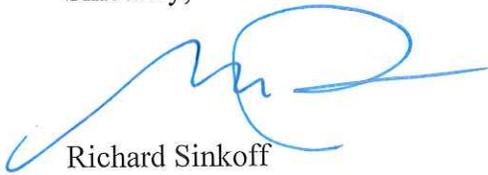

Lastly, the Port of Oakland notes that today's June 25, 2020, letter is the Port's sixth (6th) letter to CARB providing comments and expressing concerns regarding the Proposed Control Measure. (See attachments to this letter, below.) The Port has expended considerable time and personnel resources combing through the proposed regulation and raising substantive concerns and questions about many different details of the proposed regulation and the data upon which it is based.

15-B-10.9 To date, CARB staff have not provided written responses to the questions and comments posed in the Port of Oakland's first five letters. The Port has attached the previous five letters to today's letter, and specifically requests detailed responses to each of the questions raised in all the Port's letters. The Port believes that CARB's expressed intention to provide meaningful stakeholder engagement requires that CARB timely and diligently provide substantive written responses to questions raised and comments made by the Port of Oakland and other stakeholders.

The Port of Oakland is fully engaged and committed to reducing at-berth emissions and increasing shore power usage. The Port firmly believes that California seaports can achieve the desired outcomes of the existing shore power rule without getting mired in an unnecessarily complicated new regulation that is analytically flawed and presents the potential for conflict among seaports, terminal operators and vessel owners and operators.

The Port of Oakland looks forward to working with CARB on the emissions inventory and associated analyses. Please contact Ms. Tracy Fidell, P.E., Port Associate Environmental Planner/Scientist at tfidell@portoakland.com with any follow-up questions and responses.

Sincerely,

Richard Sinkoff
Director of Environmental Programs and Planning

Subject: Comments on March 26, 2020 Notice of Availability of Modified Text for Proposed Control Measure for Ocean-Going Vessels at Berth (15-day changes)

Dear Ms. Csondes:

The Port of Oakland (Port) appreciates the opportunity to comment on the rulemaking materials posted March 26, 2020, for the Proposed Control Measure for Ocean-Going Vessels At Berth (Proposed Control Measure). The Port understands that the California Air Resources Board (CARB) is planning for the Proposed Control Measure to replace the current Airborne Toxic Control Measure for Auxiliary Diesel Engines Operated on Ocean-Going Vessels At Berth in a California Port (current At-Berth Regulation), with the goal of having the new rule in place in 2021.

The Port of Oakland has a very successful shore power program, underscoring the effectiveness of the current At-Berth Regulation. In 2018, 83% of regulated vessel calls¹ at the Port of Oakland drew shore power, surpassing the regulatory requirement of 70% compliance. The plug-in rates at the Port of Oakland are increasing as more carriers retrofit their vessels for shore power. In 2019, the success rate for the regulated fleet was 84% and year to date for 2020, the rate is tracking at 83%. Once safety exemptions are taken into consideration, compliance is much higher, surpassing 90% at some berths.

Before listing comments on the regulation, the Port questions whether CARB's timeline for implementing the Proposed Control Measure is still appropriate and feasible. As CARB is aware, California and U.S. seaports and goods movement industry stakeholders are responding to an unprecedented global economic and public health crisis. The maritime industry, which

¹ Steamships and infrequent callers (<25 calls/year) are exempt from the current regulation.

includes California and U.S. seaports, is included within the transportation critical infrastructure sector defined by the Department of Homeland Security. The maritime industry, operating under extraordinarily challenging public health, safety and financial conditions due to the COVID-19 pandemic, has swiftly reprioritized and reallocated scarce personnel and financial resources to ensure the continuity of essential supply chain services to the public, communities, businesses and local, state and federal government agencies around the United States. It seems problematic and inattentive to these challenges for CARB to require California seaports, terminal operators, and shipping companies to divert their limited resources and attention to this rulemaking process when lives and jobs are at risk, especially since many of the proposed measures are not due to take effect for several years. We respectfully request that CARB place the rulemaking process on “pause” to allow the maritime industry to focus its resources and attention on the performance of its critical supply chain functions and services in response to the COVID-19 pandemic.

Specific Comments and Questions on the Proposed Control Measure

1. One of the Port of Oakland’s main concerns about the Proposed Control Measure is its potential to create conflict and failure rather than collaboration among terminal operators, vessel operators and a local seaport. The Port of Oakland has expressed this concern in previous correspondence to CARB (see attachments to this letter, below). Specifically, the proposed complex regime of TIEs and VIEs has the potential to lead to disputes, rather than collaboration, among terminal operators, vessel operators, and a local seaport. Similarly, the proposed requirement for each port to prepare a “Port plan” and agree upon a “division of responsibilities” between terminal operators and the local seaport adds another potential arena of conflict for each port and its terminal tenants. It is doubtful whether CARB enforcement staff possess the necessary dispute resolution expertise to referee the foreseeable conflicts. The Port of Oakland recommends that CARB maintain the framework of the existing At-Berth Regulation in place for containerships. California’s container shipping industry has successfully coalesced around this existing regulation and has demonstrated consistent overcompliance with the rule.
2. According to the 15-day changes, the Innovative Concepts provision provides a pathway “for regulated vessel fleets to continue using fleet averaging methods to comply with the Proposed Regulation.” If the current regime is already acceptable as an Innovative Concept, why not let the current regime stay in place? Why force the carriers to re-apply every three years for a proven method that is already working? The Port suggests that CARB allow current fleet averaging methods to stay in place for all carriers who desire it without the need to constantly re-apply every three years. The shipping industry thrives on certainty.
3. According to CARB’s own analysis, the Port of Oakland has no feasible alternative compliance method at three out of four of its terminals (representing 83% of the Port’s call volume). This means that carriers relying on a barge-mounted bonnet system for compliance at the San Pedro Bay Ports (SPBP) will not be able to call Oakland, where the only feasible compliance method is shore power. This puts the Port of Oakland at a real disadvantage, especially as compared to its competitor ports in Tacoma, Seattle, Vancouver, and Prince Rupert. Diverting cargo to distant seaports only serves to increase emissions, undermining the purpose of the regulation.

4. The inventory that serves as the foundation for this rule is flawed. It underestimates the efficacy of the current regulation and overstates the benefit of the Proposed Control Measure. The discrepancies listed below invalidate the conclusions of CARB's analysis.
 - a. CARB's 2016 baseline data do not seem reliable. Comparing summaries by vessel class size to the Port of Oakland's own data (used for billing and subject to audit), the values are off by up to 40% in critical areas.
 - b. The inventory calculation caps the benefit of the current regulation at 80%, which disregards current overcompliance primarily due to 1) the provision requiring every vessel capable of plugging in to do so, 2) the long call durations at the SPBP resulting in ~96% emission reductions, and 3) the fact that some infrequent callers are in fact plugging in even though they are not required to do so.
 - c. As recognized by CARB staff, the assumed growth rate for the Port Oakland is too high. The inventory assumes a 5% compounded annual growth rate (CAGR) for the Port of Oakland, which CARB staff have agreed should be lowered to 2.2%. Considering the current COVID-19 crisis and the related documented decline in cargo throughput at California seaports, it is evident that the 5% CAGR is speculative at best and should not serve as the analytical basis to estimate projected emissions reductions and cost-effectiveness of the Proposed Control Measure.

CARB inventory staff have acknowledged these issues in a variety of phone calls and emails to Port of Oakland staff. CARB staff members have said that they will address these issues in Summer 2020, which is obviously too late to make the required adjustments or revisions under the proposed rulemaking and adoption schedule.

The Port suggests that CARB take the time available now during the COVID-19 crisis to reassess its baseline data, compliance assumptions, and inventory calculations. The Port has kept meticulous shore power records and would be happy to share information and provide reliable data sets to CARB.

5. Lastly, the Port of Oakland notes that today's May 1, 2020, letter is the Port's fifth letter to CARB providing comments and expressing concerns regarding the Proposed Control Measure. (See attachments to this letter, below.) The Port has expended considerable time and personnel resources combing through the proposed regulation and raising substantive concerns and questions about many different details of the proposed regulation and the data upon which it is based. To date, CARB staff have not provided written responses to the questions and comments posed in the Port of Oakland's first four letters. The Port has attached the previous four letters to today's letter, and specifically requests detailed responses to each of the questions raised in all the Port's letters. The Port believes that CARB's intention to provide meaningful stakeholder engagement requires that CARB timely and diligently provide substantive written responses to questions raised and comments made by the Port of Oakland and other stakeholders.

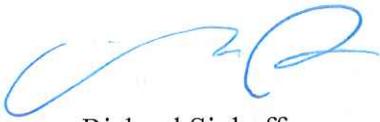

Closing

The Port of Oakland appreciate the opportunity to review the 15-day changes to the Proposed Control Measure. As the Port of Oakland's maritime air quality policies and plans – Maritime

Air Quality Improvement Plan (2009) and Seaport Air Quality 2020 and Beyond Plan (2019) – emissions inventories, and shore power records and data show, among other policies and documents, the Port of Oakland is fully engaged and committed to reducing at-berth emissions and increasing shore-power usage. However, the Port believes that California seaports can achieve the desired outcomes of the existing shore power rule without getting mired in an unnecessarily complicated new regulation that is analytically flawed and presents the potential for conflict among seaports, terminal operators and vessel owners and operators.

The Port of Oakland looks forward to working with CARB on the emissions inventory and associated analyses. Please contact Tracy Fidell, P.E., Port Associate Environmental Planner/Scientist at tfidell@portoakland.com with any follow-up questions and responses.

Sincerely,

Richard Sinkoff
Director of Environmental Programs and Planning

Subject: Comments on May 10, 2019, Draft Proposed Control Measure for Ocean-Going Vessels At Berth and Supporting Documents

Dear Ms. Csondes:

The Port of Oakland (“Port”) appreciates the opportunity to comment on the rulemaking materials posted May 10, 2019, for the Proposed Control Measure for Ocean-Going Vessels At Berth (“Proposed Control Measure”). The Port understands that the California Air Resources Board (“CARB”) is planning for the Proposed Control Measure to replace the current Airborne Toxic Control Measure (“ATCM”) for Auxiliary Diesel Engines Operated on Ocean-Going Vessels At Berth in a California Port (the “At-Berth Regulation”), with the goal of taking the Proposed Control Measure to the CARB Governing Board in December 2019. On May 10, 2019, CARB posted the revised text of the Proposed Control Measure, and provided, as supporting documents, the presentation from the May 14 and May 16, 2019 public workshops, Cost Inputs and Assumptions in PDF format, and Cost Estimates in Excel format.

The Port supports CARB’s ongoing efforts to reduce emissions from ocean-going vessels (“OGVs”) at berth and is working diligently to maximize the number of vessel visits using shore power. Port staff work collaboratively with shipping lines to provide education and resources about the shore power program. Port staff also track shore power usage in real time, collecting detailed information from marine terminal operators. The Port posts shore power usage statistics, reasons for equipped vessels not plugging in, and cost information on our shore power website: <https://www.oaklandseaport.com/development-programs/shore-power/>. In 2018, 75% of all calls to the Port drew shore power.

Public comments on the Proposed Control Measure are due to CARB June 10, 2019. Port staff understand CARB will then finalize the regulatory language and prepare an Initial Statement of

Reasons (“ISOR”) to release on October 18, 2019, with public comment on the ISOR closing on December 2, 2019. The CARB Governing Board is scheduled to hear the Proposed Control Measure on December 5, 2019. Do CARB staff intend to respond to public comment on the ISOR? Three days does not leave time for meaningful CARB response to public comment or public review of subsequent changes to the Proposed Control Measure. Port staff suggest a minimum of 14 days for CARB staff to review and respond to public comment, and for the public to review any changes, before the Proposed Control Measure can be heard.

The Proposed Control Measure includes the concept of an Incident Exemption, which is new since CARB published its draft Proposed Control Measure in August 2018. Vessel fleets would be granted Vessel Incident Exemptions (VIEs) and terminals would be granted Terminal Incident Exemptions (TIEs). Starting in 2021 for container ships and terminals, VIEs and TIEs would be granted at levels of 5% of the previous calendar year’s calls. CARB stated at the May 14, 2019, public workshop that the expected plug-in level for the container fleet is 90% in 2021.

Port staff submit the following comments and questions, divided into the topic areas of the draft regulatory text of the Proposed Control Measure, the presentation from the May 14, 2019 and May 16, 2019 public workshops, and the Cost Inputs and Assumptions in PDF format.

Comments and Questions on the Draft Regulatory Text of the Proposed Control Measure

1. Port staff request clarification on the definition of “necessary infrastructure...that will enable a terminal to comply with this Control Measure” in Section 93130.10(b) of the Proposed Control Measure and what, in this context, “subject to verification by [CARB] enforcement staff” means. From Table XI Berth and Terminal Counts, Anticipated Infrastructure Needs, and Unique Vessels of the CARB Cost Inputs and Assumptions in PDF format, it appears that CARB believes that three new shore power vaults “would be installed in response to the Draft Regulation [Proposed Control Measure]...” at the Port. Accordingly Port staff request documentation supporting CARB staff’s berth-by-berth infrastructure analysis and determination that three new shore power vaults would be required at the Port in response to the Proposed Control Measure.
2. Regarding the Terminal and Port Plans required for Container terminals in Section 93130.11 of the Proposed Control Measure, the deadline of June 1, 2020 does not allow for sufficient time after the anticipated adoption of the Proposed Control Measure for ports and terminals to submit plans. Port staff object to the text in Section 93130.11(a) that “[a]s an alternative, Ports may submit plans for their terminal operators.” Ports should not be expected to submit plans for terminal operators. In addition, the statement in Section 93130.10(b) of the Proposed Control Measure that “Ports should use terminal plans as [the] basis for developing port plans” seems to indicate that the deadline for Port Plans should be adjusted to come after the deadline for Terminal Plans.
3. The definition of “Fleet” in Section 93130.2(b)(22) of the Proposed Control Measure does not explain how fleets will be established. What will CARB require at the beginning

of each compliance year to establish fleets? Will this be part of the online Freight Regulations Reporting System (“FRRS”) mentioned in the presentation from the May 14, 2019 and May 16, 2019 public workshops?

Port staff request an initial accommodation for new fleets entering the California market. New entrants should be given an opportunity to estimate the coming year’s ship calls and estimate the number of VIEs to be awarded for the coming year.

The definition of Fleet and the requirements for VIEs also need to be responsive to changes in the shipping industry, for example when businesses merge or alliances change. Likewise, CARB should clarify what provisions will accommodate changes in the terminal industry, such as new terminals or changes in ownership, in the allocation of TIEs.

4. Port staff have two comments regarding vessel commissioning. Port staff request that vessel commissioning events that do not successfully connect to shore power as discussed in Section 93130.7(f)(2) of the Proposed Control Measure be considered eligible for exceptions under the regulation. The commissioning attempt shows that the goal was to reduce emissions through shore power and as such an Exception should be available to operators in this situation. Port staff conduct each vessel commissioning (with the exception of those at the Matson Terminal) to ensure the safety of the vessel, terminal, and workforce. Vessel commissioning is an invaluable safety procedure and should not be penalized under the Proposed Control Measure.

Port staff request that the definition of “Vessel Commissioning” in Section 93130.2(b)(61) of the Proposed Control Measure be expanded to include the case in which the port authority is the commissioning agent, as is the case at the Port of Oakland. Likewise, in Section 93130.7(d)(1) (“If applicable, commission vessel as required by terminal operator”), Section 93130.8(a)(4) (“It is the terminal operator’s responsibility to commission vessels equipped with shore power”), and Section 93130.8(d)(1) (“If applicable, commission vessel for use of shore power”), the commissioning requirement should be determined by the port authority or the terminal operator.

5. The reduction in VIEs and TIEs for Container, Reefer, and Passenger vessels from 5% each to 3% each discussed in Sections 93130.7(g)(1)(A)(ii) and 93130.8(h)(1)(A)(ii) of the Proposed Control Measure serves to increase the usage of the Remediation Fund [Section 93130.12(a)] in and after 2023. Port staff request further information from CARB on when and where the Remediation Fund will be deployed, given that CARB anticipates zero-emissions regulation on trucks, transport refrigeration units, forklifts, and cargo-handling equipment in the time frame of enhanced usage of the Remediation Fund, making those categories ineligible for incentive-funded emissions reductions.

6. The allotted VIEs and TIEs for vessels other than Container, Reefer, and Passenger vessels in Sections 93130.7(g)(1)(A) and 93130.8(h)(1)(A) of the Proposed Control Measure reduce from 5% to 3% after only one year. Port staff note that at the advent of the ATCM, the requirement was 50% of all calls in the first year. An initial expectation of 90% usage does not accommodate the fact that the Proposed Control Measure is the first-of-its-kind requirement for Ro-Ro and Tanker vessels in the world, and the technologies and equipment required do not exist at this time and have not been tested.
7. Regarding the Remediation Fund described in Section 93130.12 of the Proposed Control Measure, what is the procedure and timeline for CARB to approve a public entity to manage the funds generated at the Port?
8. Port staff request clarification from CARB of what constitutes a failure to achieve “full emission reductions” as referenced in Section 93130.12(a)(3) of the Proposed Control Measure, regarding when the Remediation Fund may be used.
9. In response to the suggestion in Section 93130.8(a)(2) of the Proposed Control Measure that a terminal operator should be responsible to interrupt a vessel call to shift the vessel to a berth with shore power if no berth was previously available, Port staff request CARB prepare and share an analysis of harbor craft emissions associated with such a shift at each port. Second to OGV, harbor craft are the second-highest emitting sources of emissions in the Port’s 2017 Emissions Inventory. Given the short duration of the average vessel call to the Port, the suggestion to call additional harbor craft to reduce the remaining hours of an OGV call’s auxiliary emissions could lead to increased overall emissions.
10. Likewise, Port staff question if the suggestion in Section 93130.8(a)(3) of the Proposed Control Measure that a terminal operator should be responsible to provide an alternative CARB-approved emission control strategy if a commissioned shore power vessel is berthed such that it cannot connect to shore power is necessary. CARB’s own analysis in the Cost Inputs and Assumptions in PDF format, Table XI, declares that no barge-based capture and control system is anticipated for the Port.
11. Port staff note that the “power meter readings at the time of shore power connection and disconnection” requested in Section 93130.8(e)(2)(C) of the Proposed Control Measure are typically not available within 7 calendar days of a vessel’s departure, as anticipated by CARB. Power meter readings at the Port are typically available at the close of the calendar month and not sooner.
12. In Section 93130.1 of the Proposed Control Measure, the stated intent of the Proposed Control Measure is “to ensure that operators of ocean-going vessels reduce emissions using a California Air Resources Board (CARB) approved emission control strategy to reduce PM, NOx, and ROG emissions at berth without increasing overall GHG emissions from this Control Measure...” How will CARB monitor GHG emissions after

implementation of the Proposed Control Measure and what is the GHG emissions baseline?

Comments and Questions on the presentation from the May 14, 2019 and May 16, 2019 public workshops

13. On Slide 4 of the presentation for the May 14, 2019 and May 16, 2019, public workshops, CARB staff show OGV at-berth emissions for the entire state. Port staff request to see these emissions totals further tabulated both by port or marine terminal and by vessel type. This is especially important as, per Section 93130.7(g)(2) of the Proposed Control Measure, VIEs are specific to the Fleet-Port pairing they are granted to.
14. On Slides 5 and 29 of the presentation for the May 14, 2019 and May 16, 2019 public workshops, CARB staff show a table of cost effectiveness for this rulemaking. The Port provides specific comments on the cost estimates below. Port staff request to see the total cost estimates and cost effectiveness estimates further tabulated both by port and by vessel type.

Comments and Questions on the Cost Inputs and Assumptions in PDF format

15. In Table V. Auxiliary Engine Effective Power Values, CARB states that it is relying on “the same power values cited in Table 7 of the emission inventory methodology <https://ww3.arb.ca.gov/msei/ordiesel/draft2019ogvinv.pdf>. Values used in cost analysis for container/reefer and tanker vessels are calculated as one kW-average per vessel type, weighted by average vessel kW at each port/terminal and vessel visits to each port/terminal.”

As noted in the Port’s February 15, 2019 letter to CARB regarding the emissions inventory, the emissions inventory relies on the assumption that container vessel effective power is a function of vessel size bin. Will this assumption in the emissions inventory be modified to align with the cost estimate?

16. In Table VI. Duration of Emission Control at Berth, CARB shows that it is estimating statewide emissions reductions based on average duration of emission control at berth per vessel visit. The Port requests an emissions and cost analysis specific to each port or marine terminal and each vessel type. The stated average Container/Reefer duration of emission control at berth of 38.8 hours is about twice the average time for shore power connections at the Port. The difference between Port data and the average shows that the statewide average is not meaningful for the Port, and the conclusions of the averaging analysis may not apply to the Port.
17. Table VIII. Electricity and Fuel Cost Inputs and the associated Cost Estimates in Excel format show that CARB expects 100% of any Low Carbon Fuel Standard (“LCFS”) credits would be reinvested into shore power. It is not guaranteed that the credits would

all be reinvested into shore power. What assumptions did CARB staff make in projecting the LCFS credit value through 2032?

18. Related to the duration of emission control at berth in Table VI, Port staff would like to reiterate that shore power usage at the Port is billed based on hours of use, not kWh drawn. This affects the assumptions in Table VIII. Electricity and Fuel Cost Inputs, as well. While the cost of Pacific Gas & Electric electricity is relevant to the Matson Terminal and the overall discussion of electricity costs, the Port is the utility serving shore power at all but the Matson Terminal.
19. The growth assumptions in Table IX. Growth Factors overestimate actual TEU growth for the Port between 2016 and 2018 and continue to use a 3.9% compound annual TEU growth rate between 2018 and 2032. Port staff request that in addition to this high estimate of TEU growth, CARB prepare an estimate of emissions using a realistic growth estimate. For reference, the Port's CAGR between 2008 and 2018 was 0.4%. Port staff understand that the growth estimates CARB is using for emissions and costs for the Port will align with the vessel fleet projections (such as larger vessels each year) that are being used for the Ports of Long Beach and Los Angeles.
20. Port staff note that the cost of compliance with the existing At-Berth Regulation is high and requires frequent vessel retrofits. In 2018, the Port commissioned or re-commissioned nearly 100 vessels, or about 25% of the ever-commissioned vessel list. The ongoing costs of retrofitting vessels when the line rotation changes, maintaining vessel equipment, and commissioning vessels with the current At-Berth Regulation apply equally to comply with the Proposed Control Measure and should be included in the cost estimates as they are real and necessary costs of compliance with the Proposed Control Measure. The Proposed Control Measure is not additive and incremental to the At-Berth Regulation, but rather a replacement and as such the entire cost to comply with the Proposed Control Measure needs to be factored into the cost effectiveness.

Closing

Port staff appreciate the opportunity to review the Proposed Control Measure and attend the public workshop on May 14, 2019. We look forward to working with CARB on refinements to improve the Proposed Control Measure, emissions inventory, and associated analyses.

Please contact Catherine Mukai, P.E., Port Associate Environmental Planner/Scientist at cmukai@portoakland.com with any follow-up questions.

Sincerely,

Colleen Liang, Port Environmental Supervisor, for

Richard Sinkoff

Subject: Comments on *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results* for the Proposed Control Measure for Ocean-Going Vessels At Berth and At Anchor

Dear Ms. Csondes:

The Port of Oakland (“Port”) appreciates the opportunity to comment on the *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results* posted January 15, 2019, for the Proposed Control Measure for Ocean-Going Vessels At Berth and At Anchor (“Proposed Control Measure”). The Port understands that the California Air Resources Board (“CARB”) is planning for the Proposed Control Measure to replace the current Airborne Toxic Control Measure (“ATCM”) for Auxiliary Diesel Engines Operated on Ocean-Going Vessels At Berth in a California Port (the “At-Berth Regulation”), with the goal of taking the Proposed Control Measure to the CARB Governing Board in December 2019. CARB posted the text of the Proposed Control Measure on August 31, 2018. The *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results* was prepared in support of the Proposed Control Measure.

The Port supports CARB’s ongoing efforts to reduce emissions from ocean-going vessels (“OGVs”) at berth and is working diligently to maximize the number of vessel visits using shore power. Port staff work collaboratively with shipping lines to provide education and resources about the shore power program. Port staff also track shore power usage in real time, collecting detailed information from marine terminal operators and posting that information on the Port’s website for public information purposes.¹

¹ <https://www.oaklandseaport.com/development-programs/shore-power/>

The *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results* document includes emissions from California ports and CARB-defined Marine Terminal Complexes (“MTCs”). The emissions for 2016 are tabulated in Appendix B, while emissions for other years are only represented graphically in figures in the document and in tables published by CARB on November 9, 2018.

Comments on the *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results* are due to CARB February 15, 2019. CARB will then host a public workshop to discuss the emissions on February 26, 2019. After that, Port staff anticipate the need for a revised emissions inventory for the Proposed Control Measure that responds to public comments. The Port provides wharfinger information to CARB annually as required by grant funding obligations. In addition, Port staff request that CARB staff work with the Port to refine assumptions made in the emissions estimates.

Given the scheduling of the public workshop after the public comment period has closed, this letter includes comments and questions that may best be addressed in the workshop. Thus, the Port is providing a list of comments and questions on the draft emissions inventory and topics for discussion at the February 26 public workshop.

Comments and Questions on the *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results*

1. Why was 2016 selected as the baseline calendar year for the emissions inventory? Does CARB plan to conduct in-depth emissions inventories for 2017 and 2018?
2. Table 4 of the *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results* shows vessel visit counts to California ports and MTCs in 2016 only. However, current trends are for fewer calls by larger vessels for a given amount of containerized cargo. The discussion on page 25 of the draft clarifies that “vessel practice changes” are not considered, even as the total number of calls is dropping in real time. Since 2013, total annual calls to the Port have been decreasing. Container cargo throughput is thus decoupled from vessel call activity. CARB should expand the vessel growth forecasting for the baseline scenario to include the effects of larger vessels and fewer calls for the same amount of containerized cargo.
3. Table 7 of the *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results* relies on the assumption that for all ports and MTCs, container vessel effective power will match that of the Ports of Los Angeles and Long Beach in 2016. The effective power does not appear to be a function of vessel size bin, so the level of detail with which the effective power is classified by CARB-defined size bin is not appropriate. In addition, given the variation between data from the Port of Los Angeles and the Port of Long Beach within the same CARB-defined size bin, the data may not be meaningful when averaged by CARB-defined size bin. CARB should use an average effective power for container vessels regardless of size.

4. The growth rates in the Freight Analysis Framework (“FAF”) for ports and MTCs outside of the San Pedro Bay are at odds with current trends. The FAF assumption for container cargo at the Port of Oakland is a 5% year-over-year growth rate between 2016 and 2020. Actual growth rates between 2016 and 2018 have not kept pace, with current Oakland planning documents estimating about half the FAF compound annual growth rate.² CARB should adjust the FAF growth forecasting for the baseline scenario to align with actual trends.
5. Page 27 of the *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results* discusses statistical significance in the context of the emission forecasting. If CARB staff have conducted an uncertainties analysis, it should be included in the methodology and results document.
6. Table 15 of the *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results* does not treat all ports and vessel types equally when assuming “Projected 2020 and Later Time on Shorepower,” without justifying the differences. For instance, CARB assumes container vessels at the Port of Hueneme spend 80% of their time on shore power after 2020, while CARB assumes at the Ports of Los Angeles and Long Beach container vessels spend only 65% of their time on shore power. Impossibly, CARB-defined size bins 7, 9, and 12 container vessels at the Port of Oakland are assumed to spend 100% of their time at berth on shore power.³ Port staff request further justification for and synchronization of the assumptions for “Projected 2020 and Later Time on Shorepower.”
7. In the discussion of the “static age distribution model” versus a survival and turnover model, CARB staff do not consider the abnormally high number of OGV keels laid in 2015. How did CARB decide that the spike in keels laid in 2015 was not material to estimating NOx emissions through 2050?
8. CARB should revise its assumption that sulfur content in fuel is 0.1% based on the results of enforcement analyses of in-use fuel sulfur. The sulfur content of in-use fuel as sampled by the CARB enforcement team in calendar years 2017 and 2018 is lower than 0.1% by 30% and almost 50%, respectively, presenting information that actual emissions are lower than those estimated by CARB. (As stated on page 12, information from CARB’s enforcement team is already used to determine reduced emissions from reduced engine activity time.)

² <https://www.portfoakland.com/community/environmental-stewardship/maritime-air-quality-improvement-plan/>

³ Vessels arriving at berth need time to tie lines and lower gangways before they can connect shore power and likewise vessels need time to disconnect from shore power when leaving the berth. With these bookends on each vessel call, a vessel cannot be plugged into shore power for 100% of the time at berth.

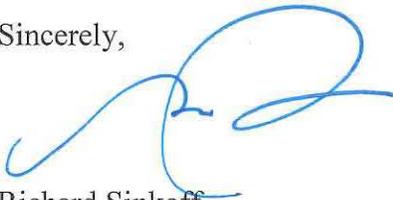

9. CARB should elaborate in the text on the Particulate Matter (“PM”) emission factor for Marine Gas Oil (“MGO”) at 0.1% sulfur. The 2007 Initial Statement of Reasons for At-Berth Regulation rulemaking used a value of 0.25 g/kW-hr for 0.1% S MGO. The *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results* uses a PM emission factor of 0.18 g/kW-hr for the same fuel. The root source for OGV auxiliary engine emission factors is stated in both cases as the 2002 Entec study, with no description of why two different values of PM emission factors are used for the same fuel.
10. Please add References to the Table of Contents and to the document (Sources of emission factor information are only included at the end of Appendix A).
11. On page 42, should the last sentence read “it excludes emissions from boilers,” not “it excludes emissions from auxiliary engines”?

Closing

Port staff look forward to working with CARB to support the updated emissions inventories referred to in the *Draft 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results* after the workshop on February 26.

Please contact Catherine Mukai, P.E., Port Associate Environmental Planner/Scientist at cmukai@portoakland.com with any follow-up questions.

Subject: Comments on Preliminary Draft Health Risk Assessment (“HRA”) for the Proposed Control Measure for Ocean-Going Vessels At Berth and At Anchor

Dear Ms. Csondes:

The Port of Oakland (“Port”) appreciates the opportunity to comment on the Preliminary Draft HRA posted November 5, 2018, for the Proposed Control Measure for Ocean-Going Vessels At Berth and At Anchor (“Proposed Control Measure”). The Port understands that the California Air Resources Board (“CARB”) is planning for the Proposed Control Measure to replace the current Airborne Toxic Control Measure (“ATCM”) for Auxiliary Diesel Engines Operated on Ocean-Going Vessels At Berth in a California Port (the “At-Berth Regulation”), with the goal of taking the Proposed Control Measure to the CARB Governing Board in December 2019. CARB posted the text of the Proposed Control Measure on August 31, 2018. The November 5, 2018, Preliminary Draft HRA and associated air dispersion modeling files that CARB released December 14, 2018, were prepared in support of the Proposed Control Measure.

The Preliminary Health Analyses document contains two types of assessment, 1) an HRA using air dispersion modeling and impacts estimation guidance from the California Environmental Protection Agency Office of Environmental Health Hazard Assessment (“OEHHA”) and 2) an Incidents per Ton (“IPT”) analysis.

The Port supports CARB’s ongoing efforts to reduce emissions from ocean-going vessels (“OGV”) at berth and is working diligently to maximize the number of vessel visits using shore power. Port staff work collaboratively with shipping lines to provide education and resources about the shore power program. Port staff also track shore power usage in real time, collecting

detailed information from marine terminal operators and posting that information on the Port's web site for public information purposes.¹

The key input to the Preliminary Draft HRA is the estimated emissions from vessels at berth, which are not yet final. Emissions estimates need to be final and the Preliminary Draft HRA updated before the Preliminary Draft HRA results can be used.

CARB conducted two HRAs addressing only the Ports of Long Beach and Los Angeles together and the Richmond Complex. CARB's use of AERMOD and the 2015 OEHHA Risk Assessment Guidelines for HRAs represents current best practices. However, the robustness of the findings is limited by the emissions estimates. Emissions estimates are typically completed before the HRA but in this case are open for public comment and discussion through the end of February 2019, at which point they may be refined.

The air dispersion model AERMOD, which CARB selected for the Preliminary Draft HRA is the preferred model from the US Environmental Protection Agency. Required inputs to AERMOD include meteorological data, emissions information for each pollutant considered, and exhaust parameters for release points. Of these inputs, the estimated emissions are key, since emissions have a direct linear relationship with the estimated ambient concentrations and health impacts from each source.

On November 5, 2018, CARB posted the Preliminary Draft HRA. CARB then posted a hard-coded spreadsheet of "Draft At Berth Emissions Estimates" used in the Preliminary Draft HRA on November 9, 2018, and air dispersion modeling files in mid-December with a public comment period for the Preliminary Draft HRA closing January 31, 2019.

CARB also posted the "Draft: 2018/2019 Update to Inventory for Ocean-Going Vessels: Methodology and Results"—for the emissions that were entered into the Preliminary Draft HRA—on January 16, 2019, with a separate public comment period for the emissions methodology and results closing February 16, 2019.

Without greater understanding of the emissions used as data inputs to the air dispersion model and risk estimation calculations, the utility of the Preliminary Draft HRA is limited. Port staff are reviewing the emissions methodology released on January 16, 2019, and are comparing it with the spreadsheet posted November 9, 2018. Port staff look forward to discussing the emissions with CARB staff at the public workshop CARB scheduled for February 26, 2019. After that, Port staff anticipate the need for a revised HRA for the Proposed Control Measure that relies on emissions that have been reviewed and understood by all parties.

The AERMOD input and output files and risk estimation databases CARB provided on December 14, 2018, appear to carry out the methodology discussed in the Draft Preliminary HRA, but further review is not warranted until emissions are finalized. In addition to the

¹ <https://www.oaklandseaport.com/development-programs/shore-power/>

wharfinger information provided by the Port to CARB annually as required by grant funding obligations, Port staff are happy to work with CARB staff to refine assumptions made in the emissions estimates.

The role of the Preliminary Draft HRA posted November 5, 2018, in rulemaking for the Proposed Control Measure is not clear.

The Proposed Control Measure is not an ATCM, in fact its stated purpose is to reduce NO_x, PM, and GHG but not the toxic air contaminant DPM—which is the focus of the Preliminary Draft HRA. The inclusion of an HRA for any of the ports in California is therefore not a fundamental driver of the Proposed Control Measure (leaving the CARB Governing Board direction, Mobile Source Strategy, and Sustainable Freight Action Plan as drivers). Thus, any reductions in risk shown in the Preliminary Draft HRA are purely informational. Indeed, CARB’s elimination of the At-Berth Regulation ATCM by focusing on a Proposed Control Measure for NO_x and PM but not DPM seems to imply that no further risk reductions are required.

The Preliminary Health Analyses report announces that the risk reductions of the Proposed Control Measure are “significant,” a term defined in the California Environmental Quality Act (“CEQA”) and used in CARB’s Certified Regulatory Program, but not defined in the CARB rulemaking process. While CARB staff present the percentage of reduction in risk of the Proposed Control Measure over the current At-Berth Regulation, the total residual risk should be compared to that of other source categories to prioritize the need for the Proposed Control Measure.

Health impacts from Criteria Air Pollutants are managed through SIP Planning, which does not require a new Proposed Control Measure for the container fleet.

PM_{2.5} is a criteria air pollutant, not a toxic air contaminant, and the California Ambient Air Quality Standards (“CAAQS”) and National Ambient Air Quality Standards (“NAAQS”) are the appropriate health-protective standards for PM_{2.5}. Regional ambient air concentrations of PM_{2.5} are managed to levels below the CAAQS and NAAQS through SIP planning. Even so, CARB’s Mobile Source Strategy calls for an evaluation of emissions reductions from currently unregulated fleets, not the already regulated container fleet which calls Oakland. Thus, SIP planning for PM_{2.5} attainment does not mandate an amended At-Berth Regulation to reduce statewide emissions through an “every vessel, every visit” control strategy like CARB staff have proposed.

The Incidents Per Ton (“IPT”) methodology presented for PM_{2.5}, a criteria air pollutant, is not a cost effectiveness metric.

The IPT methodology provides information on health effects assuming ambient PM_{2.5} concentration is the sole contributor to adverse health effects, with a direct linear relationship. The IPT methodology is not, however, part of a cost-effectiveness evaluation. CARB released a “Preliminary Cost Information” document in August 2018 as part of this rulemaking effort,

which relies on the same assumptions as the emissions inventory (which, as discussed above, may need refinement). The preliminary costs data evaluated total costs of the Proposed Control Measure, but not cost effectiveness of proposed measures calculated in terms of cost per ton of emissions removed. CARB has also not yet prepared a socio-economic impact analysis of the proposed rule.

Closing

Port staff are interested in working with CARB to improve the current ATCM focused on DPM to allow for 100% compliance. We look forward to seeing enhanced supporting documentation for the CARB emissions estimates and a revised HRA and cost effectiveness analysis once the emissions are updated.

Subject: Comments on October 15, 2019, Draft Proposed Control Measure for Ocean-Going Vessels At Berth and Supporting Documents

Dear Ms. Csondes:

The Port of Oakland (“Port”) appreciates the opportunity to comment on the rulemaking materials posted October 15, 2019, for the Proposed Control Measure for Ocean-Going Vessels At Berth (“Proposed Control Measure”). The Port understands that the California Air Resources Board (“CARB”) plans to replace the current Airborne Toxic Control Measure for Auxiliary Diesel Engines Operated on Ocean-Going Vessels At Berth in a California Port (the current “At-Berth Regulation”) with the Proposed Control Measure, with the goal of taking the Proposed Control Measure to the CARB Governing Board on December 5, 2019 at a special meeting to be held in West Oakland. The Port understands that the CARB Governing Board will not vote on the Proposed Control Measure on December 5, 2019, and that comments are due December 9, 2019.

The Port fully supports CARB’s efforts to reduce emissions from ocean-going vessels at berth and is working diligently to maximize the number of vessel visits using shore power. Port staff work collaboratively with shipping lines to provide education and resources about the shore power program. Port staff track shore power usage in real time, collecting detailed information from marine terminal operators. The Port regularly posts up-to-date shore power usage statistics, reasons for vessels not plugging in, and cost information on the Port’s shore power website: <https://www.oaklandseaport.com/development-programs/shore-power/>.

In 2018, 75% of all vessel calls at the Port of Oakland drew shore power (the number for all vessel calls includes steamships and “infrequent callers” which are both exempt from the current At-Berth Regulation), which surpassed the regulatory requirement of 70% compliance. The plug-in rates at the Port of Oakland continue to increase. For example, in October 2019, 100% of vessels

that were equipped with shore power plugged in and 83% of all vessel calls plugged in. This was the third time in 2019 and the second consecutive month where shore power plug-in rates were above 80%. For 2019, the year-to-date average, including October 2019, was 76%.

The Port has commented on previous drafts of the Proposed Control Measure and various supporting documents, and those previous comment letters are enclosed with this comment letter. The Port appreciates CARB's consideration of its past comments and sets forth its new and continuing comments and concerns below.

Comments on Emissions Inventory

The Port has reviewed Appendix H: 2019 Update to Inventory for Ocean-Going Vessels at Berth: Methodology and Results. This inventory is extremely important, as it lays the foundation for the need for, and cost-effectiveness of, the Proposed Control Measure.

The Port appreciates all the hard work that went into the inventory, and the willingness of CARB staff to attempt to explain their methodology. At the same time, Port staff (along with other public seaport authorities and shipping partners that operate in the State) have struggled to understand the inventory results and implications for both Oakland and the State as a whole. Based on the collective feedback that has been received from stakeholders, CARB staff continues to revisit the baseline and forecasted emissions assumptions with updated calculations and results even as this Proposed Control Measure is being put before the CARB Governing Board. In other words, the methodology and analysis upon which the Proposed Control Measure is based, are still in flux.

To highlight just one particularly notable example, the 2020 estimated total hours at berth divided by typical call durations by vessel size indicate that there will be 2,580 calls for the Port of Oakland in 2020, which is a dramatic departure and increase (a deviation of over 40%) from observed operational realities and shipping trends. For context, the Port of Oakland had 1,175 calls in the first 10 months of 2019, 1,543 calls in 2018, and 1,598 calls in 2017. The same calculation applied to CARB values for the Ports of Los Angeles and Long Beach predicts 2,405 calls in 2020, which means Oakland would see 175 more calls than the Ports of Los Angeles and Long Beach combined. Such an order of magnitude difference has implications for evaluating the effectiveness and potential impact of the Proposed Control Measure and any marginal benefits that could be achieved by it.

Port staff compared the 2016 baseline values used by CARB in the inventory to 2016 actual values recorded at the Port. It appears that CARB's 2016 values for total time at berth are about 8% higher than actual, and that CARB's estimates for average power by ship size (which were derived from values at the ports of Los Angeles and Long Beach) are about 9% higher than actual for Oakland. Additionally, it seems that CARB has underestimated the total activity for the regulated fleet in 2016 by about 11%, which makes it appear that the Proposed Control Measure overestimates projected reductions. These over- and under-estimates do not balance out. In fact, they lead to further discrepancies which are compounded by CARB's assumed 21.5% growth rate which is applied equally across all vessel size bins. The Port understands that this growth rate was

developed from the Federal Highway Administration’s Freight Analysis Framework and requests that CARB explain how this growth rate applies to hours at berth, cargo volumes, emissions, ship calls, and cost.

The Port appreciates CARB staff’s recent acknowledgment that the cargo growth rate for Oakland needs to be adjusted. Port staff and CARB staff have had multiple discussions about the growth rate issue, and the Port understands that CARB will consider instead the Oakland-specific cargo forecast commissioned by the Bay Conservation and Development Commission (“BCDC”)¹. This will lower the forecasted annual growth rate for Oakland from ~4.6% to a more realistic, but still high, forecast of 2.2%. For reference, the Port’s historical compounded annual growth rate from fiscal year 2008 to fiscal year 2018 was 0.4%.²

We look forward to evaluating the results and implications of these revised forecasts when the technical work is presented at a future date by CARB staff. The Port seeks assurance that no CARB vote will proceed until the emission reduction estimates reflect more realistic growth rates, for example as provided in the BCDC report.

The Port appreciates CARB staff’s willingness to apply an “efficiency factor” that acknowledges efficiency gains produced by moving more cargo on fewer, larger ships. One point of caution is that the layering of percentages makes it extremely difficult to follow the logic and relate CARB’s forecasted activity and emissions to any real-world metrics. Small errors and invalid assumptions with an initial set of data points can be magnified as these results are extrapolated into later forecast years, which lead to unrealistic and unreliable conclusions. The Port understands the complexity of the task, but a regulation as important and expensive as the one being proposed needs to be based on data that can be fact-checked, and must include forecasts that are grounded in factual operational data.

As an alternative, the Port of Oakland prefers and requests that CARB re-evaluate the inventory using 2016 baseline values provided by the Port and a Port-specific growth forecast. The Port further requests that the forecast activity levels be related to ship calls, which can be readily understood by all ports, regulatory agency staff as well as by the public. This would be consistent with how the Port tracks shore power usage and compliance. Lastly, and most importantly, the Port asks that these changes be made and the inventory fully peer-reviewed before the CARB Governing Board contemplates further action on the Proposed Control Measure.

Broad Concerns about the Proposed Control Measure

The Port is extremely concerned that the Proposed Control Measure adds a substantial additional regulatory burden and cost to carriers and terminals that are already achieving high levels of plug-ins and emissions reductions. As the Port has discussed with CARB previously along with other California seaports, CARB could achieve more cost-effective emissions reductions from other source categories. In fact, during a conference call with CARB staff on Friday, November 22,

¹ BCDC is currently amending its Seaport Plan for the San Francisco Bay Area.

² From Budget and Finance report at May 23, 2019 Port Board Meeting (File ID 098-19), slide 6.

2019, the Port joined its sister ports in proposing potentially preferred emissions reductions project alternatives based upon readily available specific equipment replacements, which will result in a significant reduction of emissions.

A second broad concern is that the Port of Oakland would be disadvantaged under the Proposed Control Measure because it does not have the option of a CARB approved emission control strategy (“CAECS”) other than shore power. As CARB itself found, the Port of Oakland cannot use a barge-based capture and control (“C+C”) method at three of its four terminals “due to concerns expressed from SF Bar Pilots about wave interaction from passing vessels and channel space and navigational constraints.” (See Appendix E: *Berth Analysis*.) The three terminals cited in CARB’s Appendix E (Everport, Matson, and OICT) account for over 83% of the Port’s call volume.

To elaborate, the potential negative impact to the Port and its carriers, tenants, and the community from the Proposed Control Measure is foreseeable. It is well established that almost every vessel calling Oakland also calls the ports of Los Angeles and Long Beach. Unlike Oakland, the ports of Los Angeles and Long Beach can use a barge-based C+C strategy. What will happen if carriers rely on a barge for compliance at the ports of Los Angeles and Long Beach, and then come to Oakland where a barge is not possible? The Port is very concerned that carriers may bypass Oakland if the Proposed Control Measure is enacted as currently written. Oakland has no feasible C+C alternative³, which could put the Port of Oakland at a serious competitive disadvantage.

To address the fact that a barge-based C+C will not work in Oakland, the Port requests that CARB grant Oakland exemptions corresponding to the number of calls that rely on barge-based C+C in Southern California.

As a third concern, the Port understands that the Proposed Control Measure anticipates other emission control strategies such as a land-based C+C system. However, the Port is concerned that landside emissions control approaches were never contemplated for use in the container fleets, have not been analyzed by CARB staff for use in the container shipping trades, and by CARB’s own analysis can result in an increase in greenhouse gas emissions⁴, which would seem to be an unacceptable outcome given the purpose and intent of this rulemaking.

The Port’s fourth concern is the introduction of shared responsibility which potentially creates conflict among vessels, terminals, and ports (see Table 5 of Proposed Control Measure) where none now exists. Upon the adoption of the initial At-Berth Regulation, CARB rightly acknowledged that in a global shipping environment it was not reasonable to expect that every vessel in every fleet would be equipped to receive shore power, hence the creation of fleet compliance averages and an exemption for infrequent callers. The Port has seen that its diligent involvement with carriers and terminals has resulted in a continuous positive trajectory in shore power usage.

³ Appendix E of the ISOR, page 12

⁴ Appendix C-1 of the SRIA, page 15

The Proposed Control Measure continues the acknowledgement that there will be instances when ships cannot plug in, due to circumstances on the vessel or at the terminal, hence the inclusion of alternative compliance options and a complex regime of Terminal Incident Events (“TIEs”) and Vessel Incident Events (“VIEs”). The Port understands the goal of the TIE and VIE regime, but it creates more problems such as record-keeping and dispute resolution, than it solves. The Proposed Control Measure has no clear grievance or dispute resolution process when conflicts arise

Specific Comments on Proposed Control Measure

1. Regarding the Terminal and Port Plans required for Container terminals in Section 93130.14, the deadline of July 1, 2021 is confusing because the Compliance Start Date listed in Section 93130.7(b) is shown as January 1, 2021. Shouldn’t the Plans and associated 90-day review window be completed prior to requiring compliance?

Port staff object to the text in Section 93130.14(a) that “[a]s an alternative, Ports may submit plans for their terminal operators.” Ports should not be expected to submit plans for terminal operators. In addition, the statement in Section 93130.14(b)(1) that “Ports should use terminal plans as [the] basis for developing port plans” seems to indicate that the deadline for Port Plans should be adjusted to come after the deadline for Terminal Plans.

2. The definition of “Fleet” in Section 93130.2(b)(29) does not explain how fleets will be established. What will CARB require at the beginning of each compliance year to establish fleets? How will this work?

The proposed regulation does not address how or whether VIEs will be granted for new fleets entering the California market, or for fleets that expand. New entrants should be allowed to estimate their annual ship calls and be granted the associated number of VIEs for the coming year. Otherwise, this is a barrier to entry for new fleets because they will be granted zero VIEs in their very first year of operation. This puts California ports at a competitive disadvantage compared to ports in Oregon, Washington, Canada, Mexico, and on the U.S. Gulf and East Coast.

The definition of Fleet and the requirements for VIEs also need to be responsive to changes in the shipping industry, for example when businesses merge or alliances change. It is not clear whether VIEs will be granted on a port-specific or State-wide basis. It is also not clear how disagreements will be resolved on whether a specific instance should use a TIE or a VIE. Will CARB adjudicate these?

3. The Port is glad to see that Vessel Commissioning is specifically exempt from the rule, as listed in visit exception Section 93130.8(c). However, the Port notes that it should not be limited to only the first visit, and should not matter whether the commissioning was successful. What happens if the commissioning was not successful? The Port of Oakland requires that vessels be re-commissioned if they have not been in Oakland for over a year. Further, the same vessel might need commissioning on both port side and starboard side. For these reasons, the same ship might require multiple commissioning trips.

Port staff request that vessel commissioning events that do not successfully connect to shore power as discussed in Section 93130.8(c) be eligible for exceptions under the regulation without the use of a VIE. The commissioning attempt shows that the goal was to reduce emissions through shore power and as such should be an exception in this situation. Port staff conduct each vessel commissioning (with the exception of those at Berths 61-6⁵ to ensure the safety of the vessel, terminal, and workforce. Vessel commissioning is an invaluable safety procedure and should not be penalized under the Proposed Control Measure.

The Port requests that the definition of “Vessel Commissioning” in Section 93130.2(b)(76) of the Proposed Control Measure be expanded to include the port authority as the commissioning agent, as is the case at the Port of Oakland. The same language is found in Section 93130.7(e)(2) (“Ensure the vessel is commissioned as required by terminal operator”), Section 93130.8(c)(2) (“The terminal requires that the vessel be recommissioned”), and Section 93130.9(a)(2) “The terminal operator is responsible for commissioning vessels equipped with shore power.”). The commissioning requirement should be determined by the port authority or the terminal operator.

4. The Port requests that the definition of “Ready to Work” in Section 93130.2(b)(55) be expanded to include “Auxiliary Marine Power (AMP) container has been loaded on the ship and is in position, if applicable.” This is crucial for the requirement in Section 93130.9(d)(2)(D) that the vessel be plugged in “within 1 hour of vessel “Ready to Work”.” Many of the ships that call at the Port of Oakland rely on an AMP container to connect to shore power. The AMP container is often domiciled at the terminal and needs to be loaded onto the vessel by a ship-to-shore crane prior to plugging in. Some of the major carriers calling in Oakland rely on an AMP container to use shore power [MOL, NYK, K-Line (the ONE Alliance), Hyundai, and APL]. A vessel is not ready to plug in until the AMP container is in position.

Likewise, the Port requests that the disconnection requirement in Section 93130.9(d)(2)(E) be re-written to accommodate certain situations where the AMP container has been removed from the ship prior to the pilot boarding.

5. The Port appreciates the increase in TIEs to 15% for the first four years of the regulation as listed in Table 3 of Section 93130.11. The Port requests that the number of TIEs and VIEs be rounded *up* to the nearest whole number instead of rounding to the nearest whole number for instances where the number of TIEs or VIEs is calculated at a fraction of ship call as stated in Section 9310.11(a)(2). Any fractional call should be counted as a whole call. For example, if a carrier made 49 calls to a California port in 2019, the VIE calculation

⁵ The Port does not commission vessels at the Matson Terminal because these shore power vaults were installed by the former tenant, APL. The current terminal operator has assumed responsibility for these vaults.

would award 2.45 VIEs at the 5% level. This should be rounded up to three, not down to two.

6. Regarding the Remediation Fund described in Section 93130.15 of the Proposed Control Measure, what is the procedure and timeline for CARB to approve a public entity to manage the funds generated at the Port? What happens if no Remediation Fund administrator is established per Section 93130.15(a)? Does that mean the Remediation Fund would not be an option?
7. Port staff request further information from CARB on when and where the Remediation Fund will be deployed. Given that CARB anticipates zero-emissions regulation on trucks, transport refrigeration units, forklifts, and cargo-handling equipment in the time frame of enhanced usage of the Remediation Fund, would those categories be ineligible for incentive-funded emissions reductions?
8. Port staff note that the power meter readings required in Section 93130.9(d)(2)(C) and (F) and Section 93130.9(d)(3)(I) are not available until the close of each calendar month. This means that it will often not be possible to report the power usage within seven calendar days of a vessel's departure, as required in the Proposed Control Measure.
9. In Section 93130.1 of the Proposed Control Measure, the stated intent of the Proposed Control Measure is "to reduce oxides of nitrogen (NOx), reactive organic gases (ROG), particulate matter (PM), diesel particulate matter (DPM), and greenhouse gas (GHG) emissions from ocean-going vessels while docked at berth at California ports." How will CARB monitor GHG emissions after implementation of the Proposed Control Measure? What is the GHG emissions baseline?
10. The Port requests that maintenance events of landside shore power equipment be included in Section 93130.9(f) along with "construction or repair" so that maintenance events also have the option of using a TIE.
11. The Port requests that the Proposed Control Measure include an exemption for liquefied natural gas (LNG) powered vessels. This would have the desired effect of incentivizing cleaner ships, which would provide significant emission reductions throughout the ship's voyage, not just the small fraction of time while the ship is at berth in California.

Conclusion

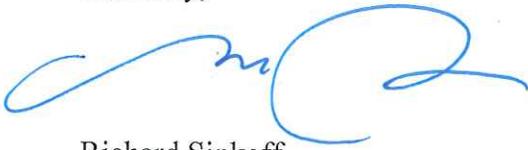

In conclusion, the Port of Oakland is fully committed to reducing emissions, and is proud of the results achieved with its industry and regulatory partners. In fact, the Port is unaware of any other port authority in the world that plugs in as many container vessels on an annual basis as the Port of Oakland. The partnership and collaboration with CARB, the Bay Area Air Quality Management District, and the Port's shipping and marine terminal customers have been a key to the success of

this program. The Port believes that these efforts can be used a model for other states and nations who might seek to reduce localized emission from ships at berth.

Port staff appreciate the opportunity to review and comment on the Proposed Control Measure and attend the public workshop on December 5, 2019. We look forward to continuing to work with CARB towards improving shore power effectiveness, emissions inventories, and associated analyses and to collaborate together to achieve cost-effective and feasible air quality improvements to protect public health.

Please contact Ms. Tracy Fidell, P.E., Port Associate Environmental Planner/Scientist at tfidell@portoakland.com with any follow-up questions.

Sincerely,

Richard Sinkoff

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

On behalf of the East Bay Leadership Council, a regional public policy and advocacy organization representing hundreds of employers across Contra Costa and Alameda Counties, we are supportive of achieving emission reductions in port communities. The mechanism by which we do that is important and must be done in a way that is safe and achieves meaningful, lasting reductions. Unfortunately, the 15-day language has advanced the timelines and put forward “innovative concepts” that can’t be meaningfully used to comply with this regulation. This leaves regulated entities in a situation where the only way they can comply with the regulation will be with vessel-based technologies which, at this point, have not been tested for the tanker sector and could result in substantial safety issues. For the safety of our communities, we can’t support a rule that fails to establish safe and effective compliance mechanisms. We strongly encourage the board to ensure that this rule can be complied with in a manner that is safe and effective and results in the community reductions we all seek.

Dear Clerk of the Board,

Please find the attached cover letter and Attachment A, which includes letters from more than 3,400 Californians supporting moving forward with a strong regulation to clean up pollution from ships at berth in California. Please put these documents into the record for the Ocean-Going Vessels at Berth Rule once it opens at 9am tomorrow.

All the best,
Adrian

-- Sent from **M .** to **California Air Resources Board** on Jun 12, 2020 --

Dear Chair Nichols and Members of the Board:

My name is M ., and I live in San Francisco.

15-B-12.1 I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
M .

Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Jessica Agramonte

-- Sent from **Faiza Ali** to **California Air Resources Board** on Jun 17, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Faiza Ali, and I live in Oakland.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Faiza Ali

Dear Chair Nichols and Members of the Board:

My name is Stephen Andersen, and I live in San Mateo. I like to breath clean air just like the neighbors around our shipping ports and highways, truckers and shippers and those that drive our highways and freeways and want to get the shipping industry to have motivation to go to cleaner propulsion...not to mention help slow down the momentum of climate change and cooking our goose within a few more years.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Stephen Andersen

As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Bonnie Arbuckle

-- Sent from **Ken Arconti** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Ken Arconti, and I live in Santa Cruz.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

-- Sent from **Judy Atterholt** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Judy Atterholt, and I live in Mountain View. With the epidemic of asthma and COPD that is compromising the health of the most vulnerable in our community, cleaning up the shipping and freight industry is an important first step.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Judy Atterholt

Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Barbara Balestieri

Dear Chair Nichols and Members of the Board:

My name is Marilyn Barthelow, and I live in Auburn.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Marilyn Barthelow

Dear Chair Nichols and Members of the Board:

My name is William Barthen, and I live in Burbank. As international trade will be on the rise again and we have discovered the effects of clean air due to COVID-19, it now time to step up, get serious and enact stricter emission rules. We've seen the evidence of clean air and the public is ready for it. The earth deserves and so do future generations.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Suzanne Becket

Dear Chair Nichols and Members of the Board:

My name is clark bell, and I live in South San Francisco.

I'm writing to request strengthening three regulations that will clean up harmful air pollution from the freight industry. This industry has harmed our lungs and our climate for decades. One is for cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth. The second and third are regulations to clean up transportation refrigeration units and commercial harbor craft--both critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

I've become aware that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. Please, I urge you to have the courage to defend our lungs and public health by adopting these regulations in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

-- Sent from **Mercedes Benet** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Mercedes Benet, and I live in Carlsbad.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Dear Chair Nichols and Members of the Board:

My name is Lourdes Best, and I live in East Palo Alto. I care about the planet and well being of futures to come.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Lourdes Best

-- Sent from **Brent Blaes**i to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Brent Blaes, and I live in Fair Oaks, CA 95628. I am writing to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Brent Blaes

Dear Chair Nichols and Members of the Board:

My name is Kate Bolton, and I live in Petaluma. It's not only clean air and social justice - the microscopic soot released by diesel engines is often carried to the snowy mountains where it traps the heat of the sun and causes the snowpack to melt sooner. With climate change producing warmer CA winters, the soot deposits have a magnified effect on a reduced snowpack, resulting in reduced water storage and, consequently, less summer water runoff for human use.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Maya Bon

In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Jason Bowman

Dear Chair Nichols and Members of the Board:

My name is Michael Braude, and I live in Menlo Park.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Michael Braude

-- Sent from **Jonica Brooks** to **California Air Resources Board** on Jun 23, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Jonica Brooks, and I live in San Francisco.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Jonica Brooks

-- Sent from **Claudia Bugarin** to **California Air Resources Board** on Jun 17, 2020

--

Dear Chair Nichols and Members of the Board:

My name is Claudia Bugarin, and I live in Bakersfield.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Claudia Bugarin

-- Sent from **Mary Bull** to **California Air Resources Board** on Jun 22, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Mary Bull, and I live in San Francisco. We know that living near these polluting facilities seriously impacts health! This is one reason why poor people of color are impacted disproportionately by COVID-19: They are forced to live in proximity of these toxic sites and have respiratory problems because of that. Please stop this pollution now!

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. My name is UC Burton, and I live in Santa Monica.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
UC Burton

-- Sent from **Carolyn Canterbury** to **California Air Resources Board** on Jun 22, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Carolyn Canterbury, and I live in [@advCity]. Because we all need clean air and drink water to survive.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Carolyn Canterbury

My name is James Carpenter, and I live in Oakland.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
James Carpenter

In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Michael Cavanaugh

Dear Chair Nichols and Members of the Board:

My name is Edward Cavasian, and I live in Palo Alto.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

-- Sent from **Margie Chen** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Margie Chen, and I live in San Francisco. As a physician, I strongly recommend reducing air pollution to reduce health consequences and premature deaths.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Margie Chen

San Francisco, CA 94123

Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Dear Chair Nichols and Members of the Board:

My name is Elizabeth Claman and I live in an area hard hit by toxic fumes and chemicals.

I am writing to request that you strengthen the regulations in order to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

I have recently become aware that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving, common-sense regulations. I therefore strongly urge you to have the courage to defend our lungs and public health by adopting these regulations, even in the face of powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,

-- Sent from **Ellea Concha-Leafequus** to **California Air Resources Board** on Jun 23, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Ellea Concha-Leafequus, and I live in Richmond. I've visited the port of OAKLAND several times since I moved to OAKLAND in 2008. Most recently this week, June 2020.

The air and water pollution are increasing all around the port. I train sniffer dogs for enforcement of anti-poaching laws- we have detected contraband in containers brought into that busy port. There is no way now, with COVID slowdowns, that any agency or private consultants like mine can work there - we can't breathe well enough, with or without masks, in the increasing smog of countless diesel smoking trucks. The bilges dumped nearshore while tugs and barges also burn oil are killing the entire bay- estuary nesting/breeding/feeding critical habitats for many species of shorebirds are ruined, creating more endangered species and disallowing any recovery. There are now endangered mammals and here's added to the growing list of birds- and we should have been improving habitat restoration by now. Not dredging the fragile Bay for more oil-bilge-dumping traffic. We need to limit all cargo ships and trucks to only electric now, phase in the automated electric vehicles that Tesla has perfected here. We are investing now in solar et al renewable energy which will soon take over the infrastructure of this model port- we should be by now the cleanest and most automated- working with increasing humans trained in green-collar jobs- the Green New Deal will save our jobs AND the environment. After we finish implementing it now, we can soon return to new work - more efficient import/ export/ recycling, no more polluting here and we will be again an international example. I will return to enforcement of CITES & ILOS as soon as we stop killing OAKLAND and all this unique Bay's lovely wildlife sanctuary around a clean exemplary efficient port.

Thank U for implementing and enforcing all cleaner electric vehicle requirements.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Suzanne Connors

In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
gail costa

-- Sent from **David Coulter** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is David Coulter, and I live in Berkeley.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. -- Sent from **jesse croxton** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is jesse croxton, and I live in Los Angeles.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

-- Sent from **Carmel Dagan** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Carmel Dagan, and I live in Los Angeles.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Dear Chair Nichols and Members of the Board:

My name is Ryan Davis, and I live in Burbank.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Ryan Davis

Burbank, CA 91502

-- Sent from **Shellee Davis** to **California Air Resources Board** on Jun 12, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Shellee Davis, and I live in Cotati. It is an outrage and a crime that right now toxic diesel pollution from oil, shipping and freight industries is allowed. This must stop because it poisons communities, creating cancer clusters and other debilitating diseases. Citizens should not have endure poisoning, illness and death to ensure profits for these polluting industries.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
JOHN DEFOREST

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Syvia Dhenin

Dear Chair Nichols and Members of the Board:

My name is Suzanne Dods, and I live in San Rafael. Clean air, clean water are unquestionably vital to our survival in our one Earth. This is a critical time and this is undoubtedly a step forward.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Suzanne Dods

Dear Chair Nichols and Members of the Board:

My name is Harry Drandell, and I live in Fresno.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Harry Drandell

As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

-- Sent from **Laura Dutton** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Laura Dutton, and I live in Los Angeles. We all have to breathe and it helps if the air is clean. We all have to live on this planet-including the shipping industry. Clean it up!

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Dear Chair Nichols and Members of the Board:

My name is Chris Eaton, and I live in Los Angeles. Here in LA we have the nation's busiest ports at San Pedro and Long beach and most of the merchandise ships to warehouses and distribution centers in Riverside and San Bernardino counties spreading this pollution across the basin and valleys. We need pollution free vehicles to accomplish this process so all of Southern California can breathe easy. This will also go a long way in meeting our climate change goals.

Please make this happen ASAP because WE CAN'T BREATHE!

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. -- Sent from **W El-Ahdab** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is W El-Ahdab, and I live in Oakland.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
W El-Ahdab

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Scott Emsley

-- Sent from **M. Epstein** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is M. Epstein, and I live in Los Angeles. I am a resident of CA. Being an asthmatic, I know too well the constant struggle for air and the abject terror of suffocation. I know the long term effects of air pollution first hand. My asthma appeared when I moved to Los Angeles as an adult. Human callousness and vane greed allows this continual source of environmental devastation, a devastation which, in the long run, exacts a cost far greater than its profits. Human intellect and creativity also provides for solutions- alternative energy supplies to continue business, continue profit, but in a way that eliminates existential harm to all - shippers, state residents, the environment upon which all survive.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. My name is Lawrence Fait, and I live in Riverside.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Lawrence Fait

-- Sent from **Thomas Ferrito** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Thomas Ferrito, and I live in Los Gatos. We need clean air.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Thomas Ferrito

-- Sent from **Elise Ficarra** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Elise Ficarra, and I live in San Francisco. As a voting resident of the Bay Area, I am increasingly concerned about the harmful environmental impact of the shipping industry on the communities adjacent to the ports and on greenhouse gas emissions in general. As the nation awakens to the violent legacy of systemic racism, it is time to acknowledge that communities of color bear the brunt of the damage from current shipping practices. Now is the time for California to take a leadership role in addressing these issues by electrifying the industry, and *not sourcing* electricity from coal.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. Dear Chair Nichols and Members of the Board:

My name is Sara Flamm, and I live in Los Angeles.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Sara Flamm

In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Madonna Fowler

-- Sent from **Jason Fragulia** to **California Air Resources Board** on Jun 17, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Jason Fragulia, and I live in Merced.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

-- Sent from **Jed Fuhrman** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Jed Fuhrman, and I live in Topanga. I breathe

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Jed Fuhrman

Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Belinda Gallardo

-- Sent from **Joe Galliani** to **California Air Resources Board** on Jun 22, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Joe Galliani, and I live in Redondo Beach. I have seen the horrific damage this super polluting industry is responsible for in the Harbor Area 10 miles from my house. We can't breathe and we cannot accept the death and destruction caused by this irresponsible industry that pollutes for profit. I find the shipping and freight industry's actions to be blatantly racist based on the impact to People of Color

I write to demand strengthening regulations to clean up deadly air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate and lies about it. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is an absolute necessity to protect us from harmful air pollution. In addition, moving immediately to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that lying industry lobbyists are fighting hard to prevent your corporate captured agency from adopting these life-saving and common-sense regulations. Show the fucking courage demanded to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we must make California's skies cleaner and defeat harmful climate pollution.

Do not fail us again. We will be watching what you do and responding accordingly.

Regards,
Joe Galliani

As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

-- Sent from **Shelagh Garren** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Shelagh Garren, and I live in Arroyo Grande.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Dear Chair Nichols and Members of the Board:

My name is Piper Gerrity, and I live in Summerland. The environment, global warming and the ocean and sea life are all important issues to me and to our future for future generations. Let's be leaders in these areas.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Piper Gerrity

-- Sent from **Janet Gilbert** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Janet Gilbert, and I live in Crescent City. It is critical that we take every step we can as rapidly as we can to reduce our carbon footprints and ameliorate the most catastrophic effects of the man-made climate change/crisis. The proposed regulatory changes will help improve air quality and reduce carbon emissions. I hope these first steps lead rapidly to transitions to solar, wind, and wave-generated clean energy to fuel electric cargo ships. And I hope that cargo ships will also reduce energy consumption with solar sails generating electricity and some wind driven propulsion as well,

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. -- Sent from **Lisa Glazer** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Lisa Glazer, and I live in San Diego. Because it disproportionately pollutes the environment.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Lisa Glazer

Dear Chair Nichols and Members of the Board:

My name is Beth Goodrich, and I live in Meadow Vista. Cleaning up the shipping and freight industry will encourage necessary change in aspects of all aspects of Industry which is crucial for cleaning up the environment.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Beth Goodrich

Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
President Grappo

-- Sent from **Allyson Gray** to **California Air Resources Board** on Jun 16, 2020 --

Dear Chair Nichols and Members of the Board:

My name is Allyson Gray, and I live in Tehachapi. Diesel fuel is filthy and obsolete and its toxic effects disproportionately harm those who are poor and disenfranchised. The health of people and the environment are vastly more important than industry profits. These industries should not have the power to poison our world and our bodies, especially when there are cleaner, more sustainable alternatives .

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. -- Sent from **Robin Gregory** to **California Air Resources Board** on Jun 13, 2020 --

Dear Chair Nichols and Members of the Board:

My name is [Robin] [Gregory], and I live in [Carmel] [CA].

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Robin Gregory

-- Sent from **David Griffith** to **California Air Resources Board** on Jun 12, 2020 --

Dear Chair Nichols and Members of the Board:

My name is David Griffith, and I live in Rancho Cucamonga. California's ports are important to our local, state and national economies and quality of life. But it should be at the expense of the air quality of the Los Angeles basin and thus the health of all of us who live here. I strongly urge you to strengthen regulations to reduce air pollution from the freight industry.

As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,

-- Sent from **April Gustafsen** to **California Air Resources Board** on Jun 11, 2020 --

Dear Chair Nichols and Members of the Board:

My name is April Gustafsen, and I live in Glendale.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

-- Sent from **Katerina Hajkova** to **California Air Resources Board** on Jun 23, 2020

--

Dear Chair Nichols and Members of the Board:

My name is Katerina Hajkova, and I live in Los Angeles.

I write to request strengthening regulations to clean up harmful air pollution from the freight industry. For decades, this industry has harmed our lungs and our climate. Cleaning up ships, which burn some of the dirtiest fuels in the world while they are at berth, is a critical strategy to protect us from harmful air pollution. In addition, moving swiftly to adopt life-saving regulations to clean up transportation refrigeration units and commercial harbor craft is critical to providing cleaner air to all Californians. As we seek to clean up the air and clean up climate pollution, these three regulations are amongst the most critical - especially because they provide greater protections for the disproportionately harmed Californians living near our major freight ports and warehouses.

It has come to my attention that industry lobbyists are fighting hard to prevent your agency from adopting these life-saving and common-sense regulations. We ask that you have the courage to defend our lungs and public health by adopting these regulations, even in the face of these powerful interests. With your leadership, we can make California's skies cleaner and defeat harmful climate pollution.

Regards,
Katerina Hajkova
