## Appendix E

# Data Record Reporting Procedures for Over-the-Air Reprogrammed Vehicles and Engines Using SAE J1979-2 

California Air Resources Board<br>June 1, 2021

## Background

Pursuant to California's On-Board Diagnostic (OBD) requirements for light- and medium-duty vehicles (title 13, California Code of Regulations (CCR) section 1968.2(g)(8)) and heavy-duty engines (title 13, CCR section 1971.1(h)(6)), manufacturers are required to compile and submit in-use tracking data records grouped by test groups and engine families that are Over-the-Air (OTA) reprogrammed if any of the specified tracking data would be cleared as a result of the reprogramming event. The procedures below describe how the data records are to be constructed, formatted, and submitted to CARB for vehicles and engines using SAE J1979-2.

## Data Fields and Format

The required data fields are presented in the table below. The first six fields describe the data record. The remaining fields are comprised of aggregated data parameters that OBD equipped vehicles and engines are required to make available. As indicated in the table, some of the data fields are computed from single data parameters read from reprogrammed vehicles. Others are the ratio of typically two data parameters. In these cases, the parameters are to be divided on an individual vehicle basis before the average and standard deviation are calculated. All averages and standard deviations shall be unweighted. All parameters shall be scaled as specified in the relevant industry standard (i.e., SAE J1979-2).

The header for the CSV file must exactly match the template below under "Example Record," with additional data fields appended at the end to report the in-use monitor performance ratio (IUMPR) parameter for each supported fault code. The additional data fields must be listed in numerical/alphabetical order based on the supported fault code from left to right. These additional data fields will be the only fields allowed to vary in the header.

No data fields may be omitted from the header row, even if the vehicle does not support certain parameters. Fields in the data row shall be left blank for unsupported data fields as shown in the example records. The first 10 emission increasing auxiliary emission control device (EI-AECD) activation parameters and the first 10 greenhouse gas (GHG) Active Technology parameters shall be reported. Any additional EI-AECD or GHG Active Technology parameters shall be omitted from the file. Each data record shall be submitted in a separate CSV file.

Submission Information and Deadlines
Manufacturers are required to collect and submit the data within 60 days of the release of the software update over the air. The data should not be aggregated until after 45 days from the release of the software. Vehicles or engines that are not successfully reflashed within this timeframe may be left out of the aggregated data record. Records should be posted to the manufacturers' space on CARB's DMS system using a filename based on the certification engine family/test group name and the date of the OTA release, as follows: family_OTA_mmddyyyy.csv.

Record Identification Fields

| Field Name | Description | Vehicle/Engine Parameters | Format |
| :--- | :--- | :--- | :--- |
| FAMILY | Test Group, Engine Family Name, or Vehicle Family <br> Name | Certification Identifier for Family or <br> Test Group | Text |
| CALID | Calibration Identification Number | Calibration Identification Number | Text |
| CVN | Calibration Verification Number | Calibration Verification Number | Text |
| CALDATE | Date the calibration was released over the air | none - entered separately | Date <br> DD/MM/YYYY |
| VEHCOUNT | Number of vehicle records included in the <br> aggregate record | none - entered separately | Integer |
| CORRUPTCOUNT | Number of vehicle records rejected based on <br> detected data errors | none - entered separately | Integer |
| ODOMETER-AVE | Vehicle odometer reading (average) | Odometer | Integer |
| ODOMETER-SD | Vehicle odometer reading (standard deviation) | Odometer | Floating Point |

| GENDEN-SD | General Denominator (standard <br> deviation) | General Denominator | Floating Point |
| IGNCOUNT-AVE | Ignition Counter (average) | Ignition Counter | Floating Point |
| IGNCOUNT-SD | Ignition Counter (standard deviation) | Ignition Counter | Floating Point |
| PXXXX-XX-AVE | IUMPR Ratio (average) for Fault Code <br> PXXXX-XX | Numerator/Denominator for Fault <br> Code PXXXX-XX | Floating Point |
| PXXXX-XX-SD | IUMPR Ratio (standard deviation) for <br> Fault Code PXXXX-XX | Numerator/Denominator for Fault <br> Code PXXXX-XX | Floating Point |
| PYYYY-YY-AVE | IUMPR Ratio (average) for Fault Code <br> PYYYY-YY | Numerator/Denominator for Fault <br> Code PYYYY-YY | Floating Point |
| PYYYY-YY-SD | IUMPR Ratio (standard deviation) for <br> Fault Code PYYYY-YY | Numerator/Denominator for Fault <br> Code PYYYY-YY | Floating Point |
| PZZZZ-ZZ-AVE | IUMPR Ratio (average) for Fault Code <br> PZZZZ-ZZ | Numerator/Denominator for Fault <br> Code PZZZZ-ZZ | Floating Point |
| PZZZZ-ZZ-SD | DTC-Specific IUMPR Ratio (standard <br> deviation) for Fault Code PZZZZ-ZZ | Numerator/Denominator for Fault <br> Code PZZZZ-ZZ | Floating Point |
| $\cdots$ | Continue for IUMPR Ratios for all <br> remaining Fault Codes in <br> numerical/alphabetical order from left to <br> right. | Numerator/Denominator for <br> Remaining Fault Codes | Floating Point |

NOTE: Replace "PXXXX-XX," "PYYYY-YY," "PZZZZ-ZZ," and so on with the actual 3-byte DTC values (e.g., P0400-9C, P0420-00). The parameters must be provided for every supported fault code for every monitor required to track and report IUMPR data.

## Example Records:

The first row of the data record shall include the field names exactly as shown below, with the exception that additional data fields shall be appended at the end of the header reporting the IUMPR parameter for each supported fault code, with the additional data fields sorted in numerical/alphabetical order based on the supported fault code from left to right. These additional data fields will be the only fields allowed to vary in the header.

Following the header row are two additional rows of data. The first additional row is for a gasoline powered light-duty plug-in hybrid vehicle with a single cylinder bank, no secondary air, and four active GHG technologies. The second additional row is for a non-hybrid heavy-duty diesel engine with no NOx adsorber, four EI-AECDs, 4 active GHG technologies, and no start/stop technology. The column names are not repeated for the second example.
