Initial Statement of Reasons
for the Proposed Amendments to the Regulation
for Reducing Volatile Organic Compound Emissions from
Aerosol Coating Products and
Proposed Tables of
Maximum Incremental Reactivity (MIR) Values,
and
Proposed Amendments to Method 310, “Determination of
Volatile Organic Compounds
in Consumer Products”

Release Date: May 5, 2000
INITIAL STATEMENT OF REASONS
FOR THE PROPOSED RULEMAKING

Public Hearing To Consider

Proposed Amendments to the Regulation
for Reducing Volatile Organic Compound Emissions from
Aerosol Coating Products and
Proposed Tables of
Maximum Incremental Reactivity (MIR) Values,
and
Proposed Amendments to Method 310, “Determination of Volatile Organic
Compounds in Consumer Products”

To be considered by the Air Resources Board on June 22 or 23, 2000, at:

Air Resources Board
Board Hearing Room, Lower Level
2020 L Street
Sacramento, California

Air Resources Board
P.O. Box 2815
Sacramento, CA 95812

This report has been prepared by the staff of the California Air Resources Board. Publication does not signify that the contents reflect the views and policies of the Air Resources Board, nor does mention of trade names or commercial products constitute endorsement or recommendation for use.

Proposed Amendments to the Aerosol Coating Products Regulation and
Proposed Tables of MIR Values Reviewed By:

Carla D. Takemoto, Manager, Technical Evaluation Section
Janette Brooks, Chief, Air Quality Measures Branch
Donald J. Ames, Assistant Chief, Stationary Source Division
Peter D. Venturini, Chief, Stationary Source Division

Proposed Amendments to Air Resources Board Method 310 Reviewed By:

Michael Spears, Manager, Evaluation Section
George Lew, Chief, Engineering and Laboratory Branch
William V. Loscutoff, Chief, Monitoring and Laboratory Division

Date: May 5, 2000
Acknowledgments

This report on the proposed amendments to the Aerosol Coating Products Regulation, the Proposed Tables of MIR Values, and the Proposed Amendments to Method 310 were developed by the Air Resources Board Stationary Source and Monitoring and Laboratory Division staffs with the participation of industry representatives. We would particularly like to thank:

National Paint and Coatings Association
Chemical Manufacturers Association, Hydrocarbon Solvents Panel
   Chemical Manufacturers Association
   National Aerosol Association
Reactivity Scientific Advisory Committee
Reactivity Research Advisory Committee
Reactivity Subgroup of the Consumer Products Working Group,
   Western Aerosol Information Bureau
   Dr. William P. L. Carter, and
   Mr. Doug Raymond, Sherwin-Williams, Consumer Group

The following Air Resources Board staff participated in the preparation of this report:

Principal Authors

Andrew Chew, M.S. (Lead)
Eric S.C. Kwok, Ph. D.
   Carla D. Takemoto

Contributing Staff:

Pam Clymer               Terry Houston, Ph.D.
Wendy Howard            Robert C. Jenne, J.D.
Jacqueline Johnson       David Julian, P.E.
David Kemenah            Robert Krieger
Reza Mahdavi, Ph.D.      Eileen McCauley, Ph.D.
Paul Milkey              Harry Ng
Randy Pasek, Ph.D.; P.E. Kathy Spring
Floyd Vergara, P.E.      Eric Walton
Melinda Weaver           Dodie Weiner

   C. Summary of the Data from the 1997 Aerosol Coatings Survey ............... 25

IV. USE OF PHOTOCHEMICAL REACTIVITY AS AN OZONE CONTROL APPROACH ................................................................. 30
   A. Introduction ......................................................................................... 30
   B. Program Elements .............................................................................. 31
      1. Using the Maximum Incremental Reactivity (MIR) Scale .................. 31
      2. Including “Exempt” Organic Compounds in Reactivity-based Regula
tions ........................................................................................................ 31
      3. Calculating Upper Limit MIR Values .............................................. 32
      4. Calculating Group MIR Values for Hydrocarbon Solvent Mixtures .... 32
      5. Addressing Uncertainty in the Maximum Incremental Reactivity Scale .................................................................................. 36
      6. Calculating “Equal Air Quality Benefit” Reactivity Limits ............... 37

V. PROCESS FOR DEVELOPMENT OF THE PROPOSED AMENDMENTS TO THE AEROSOL COATING PRODUCTS REGULATION, PROPOSED TABLES OF MAXIMUM INCREMENTAL REACTIVITY (MIR) VALUES, AND PROPOSED AMENDMENTS TO AIR RESOURCES BOARD METHOD 310 ................................................................. 42
   A. Introduction ......................................................................................... 42
   B. Role of the Reactivity Subgroup .......................................................... 42
   C. Reactivity Research Advisory Committee (RRAC) ................................ 43
   D. Reactivity Scientific Advisory Committee (RSAC) ................................ 44
   E. Public Workshops, Aerosol Coatings Workgroups and Other Meetings .................................................................................. 44

VI. PROPOSED AMENDMENTS TO THE AEROSOL COATING PRODUCTS REGULATION, PROPOSED TABLES OF MAXIMUM INCREMENTAL REACTIVITY (MIR) VALUES, AND PROPOSED AMENDMENTS TO AIR RESOURCES BOARD METHOD 310 .................................................................................. 47
   A. Introduction ......................................................................................... 47
   B. Proposed Amendments to the Aerosol Coatings Regulation ................. 48
      1. Introduction ......................................................................................... 48
      2. Proposed Amendments to Definitions, section 94521 ....................... 49
      3. Proposed Amendments to Standards and Requirements for Aerosol Coating Products, section 94522 ........................................... 51
      4. Exemptions, section 94523 ................................................................. 56
      5. Administrative Requirements, section 94524 .................................... 56
6. Test Methods, section 94526 ................................................................. 57
C. Proposed New Subchapter 8.6, sections 94700-94701, Tables of MIR Values ................................................................. 57
D. Proposed Amendments to ARB Method 310, Determination of Volatile Organic Compounds in Consumer Products ................................................................. 58

VII. TECHNOLOGICAL AND COMMERCIAL FEASIBILITY OF THE PROPOSED REACTIVITY LIMITS ................................................................. 60
A. Process of Setting Proposed Reactivity Limits ............................................. 60
B. Technological and Commercial Feasibility .................................................. 60
1. Technologically Feasible ................................................................. 60
2. Commercially Feasible ................................................................. 61

VIII. REFORMULATION OPTIONS TO MEET THE PROPOSED REACTIVITY LIMITS ................................................................. 65
A. Product Formulation of Solvent-based Aerosol Coatings ................................ 66
B. Product Formulation of Water-based Aerosol Coatings ................................ 66
C. Reactivity-based Reformulation Strategies .................................................. 67
1. Solvent-based Products ................................................................. 69
2. Water-based Products ................................................................. 69
D. Conclusion ......................................................................................... 70

IX. DESCRIPTION OF AEROSOL COATINGS CATEGORIES AND PROPOSED REACTIVITY LIMITS ................................................................. 72
A. Description of the Seven Major Categories .................................................. 73
1. Clear Coatings ..................................................................................... 74
2. Flat Paint Products ............................................................................... 75
3. Fluorescent Coatings ........................................................................... 77
4. Metallic Coatings .................................................................................. 78
5. Non-Flat Paints .................................................................................... 80
6. Primer Coatings ................................................................................... 82
7. Ground Traffic/Marking Paints .............................................................. 83
B. Description of Remaining Specialty Categories ......................................... 85

X. ENVIRONMENTAL IMPACTS ................................................................. 90
A. Summary of Environmental Impacts ......................................................... 90
B. Legal Requirements Applicable to the Analysis ......................................... 91
C. Compliance Alternatives ......................................................................... 91
D. Potential Environmental Impacts .............................................................. 94
1. Impact on Ground-Level Ozone ........................................................... 94
2. Impact on Particulate Matter (Aerosols) .................................................. 95
3. Impact on Global Warming ................................................................. 97
4. Impact on Stratospheric Ozone Depletion .............................................. 98
